While you're at it, ask the Elmers to check *their* sending. I was listening in the Extra portion of 40M the other day, and I got stuck listening to this guy sending CQ. I think it was the same instinct that makes you slow down and look at accidents...

This guy(?) was sending your standard "samba CQ" (daaaaah dit daaaaaah dit daaaah daaaah dit daaaaaaaah -- swing your hips as you read it). Then he got to his call. daaaaaaah dit daah. That was at about 20 WPM. Then the number. Four dits at 50 WPM, a pause, and then a 10 WPM dah. Etcetera.

Bad fists can be found anywhere from the Novice band to the TCC (the alleged creme-de-la-creme of traffic handlers.) The problem isn't the technology. The problem isn't the intelligence of the operators. It's their egos. Telling a ham you can't understand what he or she is sending a sure way to insult them, same as saying "Hey, you're ugly!"

How come there's no Q-signal, like QFS, for "Your fist sucks/Does my fist suck?" I bet I'm not alone in having blamed QRN, QRM & QSB for being unable to copy what people are sending. Too bad there's no easy way to get the message across... Maybe OOs send notices to people with illegible fists?

With these newfangled digital signal processing systems, it should be easy to print out a report on someone's fist

Your fist--
nominal speed: 10
variance in dit length 0% | what you'd expect if someone's using
variance in dah length 0% | a keyer--straight key or bug would differ
variance in letter
spacing 20%
variance in word
spacing 40%

And then you could give a graphical depiction of what the code looks like: _____ _____ _____ (a lopsided K)

--Shawn

(10 years and counting, not one Morse sending error. But then I may
get back on HF soon...)

The Candlewood Amateur Radio Association (CARA) will sponsor the
1994 Connecticut QSO party, to be held 30 JUL 2000 to 31 JUL 0400
UTC and 31 JUL 1200-2000 UTC. Bands will be 160, 80, 40, 20, 15,
10, 6 & 2m. Stations may be worked once per mode on each band.
CARA will operate W1AW (the ARRL station Hiram Maxim memorial
station) on Sunday, 31 JUL. As well the club station, W1QI, will
operate throughout the contest.

Plaques will be awarded to first place CT stations for several
categories. Certificates will be awarded first place stations in
other states, as well as second and third place in all states.

To all those who participate, good luck. To those that don't, if
you hear a station calling CQ Connecticut QSO Party, by all
means, pick up the mike and reply!

For an operating package, contact Frank, N8WXQ, (address
in Callbook).

1068. Re: Reviving old NiCads

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-20 07:24:24 UTC
From: willmore@iastate.edu
Message-ID: <willmore.774689064@tremplo.gis.iastate.edu>
Source record: 263321

cripps@hk.net (David Cripps) writes:
>I remember in the dim and distant past, an article explaining how to revive
>"dead" NiCads (Not just ones with a poor memory)

>I think it was something along the lines of applying an overvoltage!

For a NiCd battery that shows a terminal voltage of 0V and acts like a dead short, there only one thing that I know to do to 'restore' the battery. Take a larger size fully charged NiCd cell (do this a cell at a time) and connect it in parallel with the damaged cell for a second. Repeat this until the cell 'breaks loose'. If it recovers, charge it nicely and cross your fingers. This will resotre it to use, but the capacity will be decreased and the (already high) self discharge rate will increase.

>Anyone else know the trick or do I threw my old NiCads away and start again.

Given what I've said above, I say, junk the darn things and get new cells. Donate the cells to a younger/poorer ham that wants to give it a try. (How do you think I learned to do this? ;) At $1.20 each for generic 600mA cells and ~$2.00 for 850mA cells, what's the point of messing with dead cells only to be able to restore them to poor condition? Forget it, ditch the old cells (dispose of them properly) and get new ones.

Buy them in groups, discharge them in the same groups, charge them in the same groups, etc. Never break up a group. If you C/10 charge, expect 1000 cycles is you discharge to .9V/cell. If you C/1 charge, expect 300+ cycles.

Best of luck.

Cheers,
David

Message-ID: <30infd$q2r@gabriel.keele.ac.uk>
Source record: 263322

The expedition beacon on Ellesmere Island, VE8RAF, is now operating to a schedule of 1 day on 10metres followed by two days on 6 metres. So on 20 July it will be on 10 and on 21 and 22 on 6; 23 on 10 and 24/25 on 6 and so on until approximately 5 August when the expedition ends.

The beacon frequencies are 28192.5 and 50018. Cycle is a long series of dots with ID approximately every 3 minutes. If you hear either beacon at any time please let me know by direct e-mail.

The expedition is active daily, mainly on 20m cw under the same callsign. It also has a 50MHz transceiver.

I am having the following problem with the TrakSat program I am trying out.
I am unable to get it to accept updated Kelps.
I am getting me Kelps from the Internet and I edit out any Headers
and junk, make sure its in ASCII text, and give it thecorrect
file name of tle.txt. I think I am doing it correctly.
Any suggestions that could help?
I want to get the program 100% before I decide to register it.
Thanks

>73 de KE4CLW,
>John in Austin, TX

John,
As far as I know there will only be five classes of licensing.
However, I do not have a direct pipline to the FCC so this may be wrong :).

The one thing that I wish to clear up is that the Tech and the Tech
PLUS are two different (not better or worse - just different) animals. This
is especially important for the Tech PLUS that recieved their licence BEFORE
March 21, 1987. No CSCE is needed (if I read the rules correctly) since
these Techs will be given credit for the General Written Exam (element 3(
B)). All we need (yes, I am a pre-1987 Tech) is to pass the 13 wpm code in
order to get the General "ticket".

Ok, enough said...waiting for any replies

1072. feed-forward amplifiers

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-20 11:43:19 UTC
From: randolph@est.enet.dec.com
Message-ID: <30jgsj$ot0@mrnews.mro.dec.com>
Source record: 263199

The July "RF Design" has an article on feed forward amplifiers. The basic idea is to tap off some of the input to the amp, delay it 180 degrees in phase, and combine this with some of the output of the amp. This gives you a signal composed of only the error added by the amp. Now you amplify this, phase it 180 degrees again, and combine it back into the power amp's output, to cancel out the error and get a nice, clean, IMD-free output.

Comments? Is this technique used in amateur equipment at all?

-Tom R. randolph@est.enet.dec.com

Hi Jim, what I said was that I'd do it if 10 people in the world cared ... So far only three people have written to say they'd like one. While I'm personally disappointed at the yawning enthusiasm for ATV, I will create the list anyway. I don't think it will take much of my time to administer :-(Sometime next week I will post info on subscribing and take steps to advertise the list.

- Ed. (ATV: Amateur Radio's loneliest mode ...)

Curious: "Technician Plus" is one of the *SIX* license classes listsed on
the new FCC Form 610. Wonder why they bothered if that class doesn't exist.

Another curiosity: no specific exemption is made in the rules regarding
the expiration of CSCEs for Tech+ hams - those too should expire in 365
days - but they don't.

Greater than 2 MeV Electron Fluence for 18 JUL is: 1.5E+09

SYNOPSIS OF ACTIVITY

SESC Synoptical data is valid from 17/2100Z to 18/2100Z.

Solar activity was at low levels. Region 7758 (S12E66)
was assigned today. There was a C3/SF flare from new Region
7758 at 1331UT. The greater than 2 MeV electron flux has been
at high levels.

Solar activity forecast: solar activity is expected to be
at very low to low levels.

The geomagnetic field has been at quiet to unsettled
levels for the past 24 hours.

STD: A weak sudden magnetic impulse was reported by Boulder at
01:14 UTC on 19 July, measuring only 9 nT. The source is
uncertain.

Geophysical activity forecast: the geomagnetic field is
expected to be at unsettled levels.

Event probabilities 19 jul-21 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 19 jul-21 jul

A. Middle Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

HF propagation conditions were normal over all regions.
Isolated and localized periods of minor signal degradation
may have affected some high-latitude regions early in the UTC
day. Near-normal to above-normal propagation is expected over
the next 3 days, through 21 July inclusive.

Greg brings up a good point, and I have had the same trouble with some
ham's fists. I don't know if it is getting "worse" with time, but it
sure feels like it. There are many, many CW ops that I will pass by
simply because their code is pretty hard to copy. I copy in my head, and
it makes it tough to keep up when I continually revise my estimates of
what was being sent :-). I personally make it a point of pride to send
nice code, and welcome comments over on 7040, where I hang out, or
up in the novice band when I move up there.

OK, I've checked all the local libraries and have had no luck finding a copy
of the Jan 1993 Popular Electroics (found only library that even subscribed
and then of course this issue was missing!!!)

If anyone can help me send some email. I'm looking for one article in that
issue.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX
Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL,
JH4RHF, PA3ERC, VE3UOL, AD1C, KC1AG, BV5AF, K4CEF & Southeastern
Cluster Group, N4ZC, WD4R, KC7V, AD8V, KB8RJ, KD8JN and KG9N for the
following DX information.

0S, PRINCIPALITY OF SEBORGA. Stations 0S1A and 0S1B still contune to be
active, mainly on 20 meters, CW, SSB and at various times. Remember!
WORK FIRST WORRY LATER! (WFWL) The following information was relayed to
OPDX from the Southeastern Cluster Group:
Paulo, I2UIY, who just completed the 1A0KM operation, says the
0S1A/0S1B was operating on "bogus credentials". It seems this

"Principality of Seborga" is something on the order of New Orlean's Mardi Gras. Each year this town of Seborga has a parade and names a "PRINCE" for the celebration. The "PRINCE" sold the license to the father/son Italian duo. Paulo states an investigation is underway by the Italian FCC because of the unauthorized transmissions using an illegel callsign.

9A, CROATIA. Jacky, F2CW, who left Pakistan in December, has been working for the Red Cross in Croatia the past 6 months. Jacky has been somewhat active as 9A/F2CW, but expects to receive the callsign 9A5CW shortly. He also holds the call T9/F2CW (Bosnia-Heregovina) but has not activated it yet. His activity has been mainly on CW with very little SSB operations. Jacky will try to be active also on RTTY, Pactor and AMTOR. QSL 9A/F2CW, 9A5CW and T9/F2CW to KC7V.

BO0M, MAZU ISLANDS, TAIWAN (ROC). In a news release from the CTARL: A group will activate BO0M from Mazu Islands, July 21-31st. The frequencies for SSB are 7060, 14260, 21260 and 28460 kHz. There will also be some CW and satellite activity. The location of the islands are: 26.158 North and 119.778 East. Here is the huge list of operators: BV5AF (leader of DXpedition), BV2AD, BV2AP, BV2CB, BV2DD, BV2HH, BV2KI, BV2OL, BV2QB, BV2RD, BV2TA, BV2WC, BV4AS, BV4BN, BV4IK, BV7FC, and JP1RIW. QSL via BV2KI, P.O. Box 84-609, Taipei 100, Taiwan, ROC.

C6, BAHAMAS. Chuck, KG9N, will be active from the Little Bahamas Bank Group on the island of Abaco (NA-080) as KG9N/C6A, August 3-9th. He plans to be active in the North American QSO Party (1800z Aug. 6th to 0600z Aug. 7th). With a R7 vertical (and maybe a long for 40/80 meters), Chuck will be operating mainly on CW (up 25 kHz from edge), but will be on SSB on 14195 kHz around 0300z daily. There may be some 6 meter activity, if Chuck can find a rig.

GM0, ISLE OF MULL (EU-008), SCOTLAND. Jack, KB8RJ, will be active from this Inner Hebredes Group as GM0/KB8RJ, August 8-20th. Activity will be SSB only on 14260, 21260, 28460 and 7 MHz if conditions permit. There is a possible chance for other Scottish Isles to be active if time permits one week before/after. QSL to CBA.

HB0, LIECHTENSTEIN. Members of the Contestgroup Oude Maas (PI4COM) will be signing HB0/PA3ERC from Malbun, Liechtenstein, July 17-24th. Operators PA3ERC, PA3BBP, PA3EWP and PA3GBQ will active on 160-10 meters, including the WARC bands, CW, SSB and RTTY. QSL via PA3ERC.

HL, SOUTH KOREA. Del, HL9DC, an American from Ohio, is active from Wonju, South Korea. His length of stay is unknown at this time, but he likes working stateside stations. He was heard recently 14025 kHz around 1200z. Also check the bottom edge of 7 MHz between 1100-1200z. QSL via N7RO.

P4, ARUBA. Hiro/JR4PMX, Jun/JH4RHF and his wife Kumiko/JR4DUW will be active for one week on Aruba starting August 24th. Jun's call will be P40S, Kumiko's will be P40YL and Hiro's was not available at this time. Activity will be on 160-10 meters, CW, SSB and RTTY. QSL to their

callbook address (CBA).

SPECIAL EVENT STATION. The Canton Amateur Radio Club will operate "W8AL" to celebrate the "Pro Football Hall of Fame Greatest Weekend", July 25th through July 31st from 1400 to 0200z. QSL and certificate will be available for contacts. Operation will be on:
SSB - 3870, 7270, 14270, 18150, 21350, 24950 and 28350 kHz
CW - 3700, 7125, 10120, 14050, 18080, 21125, 24910 and 28125 kHz

There will also be RTTY, Packet, AMTOR, satellite, 2 & 6 meter FM/SSB. For an unfolded certificate, send your QSL with "contact number" and a 9 x 12 SASE, with two units of first-class postage. For a QSL or a folded certificate, send your QSL with "contact number" and an envelope (#10 business size) SASE to Randy Phelps, KD8JN, 1226 Delverne Ave, SW, Canton, Ohio 44710-1306. SWL's are Welcome!

SU, EGYPT. Ayman, SU1AY, was heard in Cairo, on the 14226 DX net around 0000z. QSL via OE6EEG.

ZD8LII QSL MANAGER. Ed, AD8V, states he has been receiving cards for QSL requests for ZD8LII from time to time, but he is NOT or has NEVER acted as his QSL Manager. QSL ZD8LII to G0LII.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

To: info-hams@ucsd.edu

COMMUNITY RESOURCES IN HAM RADIO

Few people realize that a lot of VHF and UHF ham radio operating relies on community resources. What is a community resource? A community resource in ham radio is a service or equipment available to operators that can be used freely without cost.

Your local voice repeater is a community resource. Whether it be club or individually
owned, the repeater is available to all amateurs for their use. Some repeaters are
"closed" repeaters and are only available to a small group but most fit into the "open"
category. The hams that maintain these repeaters have invested their own time and
money to equip the station and keep it running. Most hams give little thought when
they key up a repeater to talk to their friends as to what it takes to keep supplying this
resource.

Many naturally take advantage of the situation and never give a second thought until
the repeater goes off the air. Equipment failure, lightning, and other events can cause a system to fail cutting off communications. This is when you tend to hear complaints

being shouted, "That darn repeater is off the air, AGAIN!". Little do people realize that it takes the effort of a few select people to climb up the hill late at night to do the repairs. These people give up their free time to keep this community resource going for all to enjoy.

Packet radio is full of community resources. Digipeaters, nodes, packet clusters, and
bulletin boards are all available for general ham use. Expensive dedicated computers, TNCs, and radio equipment comprise these stations. All this is unselfishly donated to the community resource pool for everyone to use. A lot of time is required to maintain these stations everyday, most of which is invisible to the user.

Another little recognized resource is the human resources. Our Volunteer Examiner
troops donate their time to bring new blood into the hobby through licensing exams.
Although they are "reimbursed" for their expenses, this payment is trivial compared to
what they contribute. Additionally, you have the convenience of having hams who will
take the time to answer questions from others or who will offer to help new hams get
started. These folks generously offer their knowledge and experiences to all those that ask.

What can you do to contribute to our community resources? Well, join the club that
sponsors your favorite repeater or packet node. Your dues go into helping maintain the equipment as well as other things. Most clubs struggle along financially but have
dynamite repeaters or packet stations that the ham community would surely miss. The
costs of the club's services largely outweigh the small dues payment.

Or, just say "thank you!". A simple thank you to the person or club is always
appreciated. To some, this makes it all worth while when someone shows their
appreciation. Most folks don't do this for the recognition or credit. They just enjoy giving but still welcome a simple thanks once in a while.

Help out by being a Volunteer Examiner if you can. Many groups can always use the
extra help during exams and your offer will not be turned down. Help the kid next door
get on ham radio or help the new ham find some used equipment to start his/her
station. There are many ways to contribute to the cause.

Now that you realize what a community resource is, it is amazing how often we use

these resources without even thinking about it. This is a shame because nowadays
most people won't give you the time of day on the street but we have such an abundant supply of generosity in ham radio. Let's not lose what we have. It's always easier to keep the momentum going than to start from scratch. Do something!

Your comments and suggestions are welcomed. Please send email to: RobB873302@aol.com or write: Rob Bellville, N1NTE, PO Box 892, Northboro, MA

CQ Video Wins CINDY Award

[Hicksville, NY] -- Ham Radio Horizons, the CQ video introduction to amateur radio, has been awarded a bronze medal in the Association of Visual Communicators' 1994 CINDY awards competition. The CINDY awards honor outstanding productions in all fields of non-theatrical video programming , including radio, television, cable and non-broadcast categories. Ham Radio Horizons won in the "public service & information" category. The Association of Visual Communicators is a non-profit professional association formed in 1957. This was the 35th annual CINDY competition. ("CINDY" is derived from the award's original name, the CINema industry award.)
Ham Radio Horizons is part of the CQ Video Library, which offers introductory programs on a wide variety of amateur radio activities. It is a basic introduction to the hobby, focusing on the people and activities of ham radio. It was also honored earlier this year as a finalist in the New York Festivals competition and received Honorable Mention in the International Television Association's New Jersey Awards competition.
Ham Radio Horizons was written, produced and directed by Rich Moseson, NW2L, who is also Executive Producer of the CQ Video Library, a division of CQ Communications, Inc., publishers of a

variety of radio-related books and magazines, including its flagship, CQ Magazine, Popular Communications and Communications Quarterly. Richard Ross, K2MGA, is President and Publisher.
I'm one of the lucky persons able to watch this video. I would recommend it to anyone to use this video if they are to teach an introduction ham radio class. Guest appearances on this video are, Carole Perry WB2MGP, a teacher in New York who uses ham radio in her classroom, Sam Garret, AA0CR, columnist for Worldradio magazine; former Sen. Barry Goldwater, K7UGA; King Hussein of Jorden, JY1, and many more. This video has helpful hints on what to do before and after one becomes licensed. Also, it gives the average person of an idea of who they will bump into on the air waves. Their are other topics of this video which is geared toward the young, YL's, Handi-Hams, the retired and much much more. Most importantly, this video shows phone numbers and addresses of various ham radio organizations to contact for more information.
The 1994 CINDY Awards were presented in June at the INFOCOMM trade show in Los Angeles.

Special Thanks to Rich Moseson NW2L.

Feedback: Field day Aftermath

From:KB7ZJZ@KB7WE.#WWA.WA.USA.NOAM

Hello, Alex. I just read your Youthnet NEWS 005, and was happy to find it. Pretty good idea. You mentioned Field Day, so I thought I would share my expiriences with Field Day.
This last Field Day was my first ever. I have been a ham for about 9 months and am a General class licencee. I have read about field day and heard about it quite a bit, so when I got the chance to go to one, I was very excited.
I went with the Jefferson County Amateur Radio club, and we operated as a 3A WWA from an old army base, Fort Worden, on top of an old radar sight.
We had a great time putting up antennas on Friday, in preparation for the contest. I learned more about antenna theory and practicible ideas for putting them up in that one afternoon than I have in all my life! It was ham radio at warp speed, and very thrilling. The highlight of that day was when we tried out the antennas, and I got a 599 from Finland on 20 meter CW! I was so excited, it was hard to get to sleep, even after a long day putting up antennas.
The next day, we started right at the first minute of contest, and got out into everywhere! The novice station was pulling them in from the east coast on 10 meters, working on an 80 meter loop, and the QSOs were coming so fast and thick, it was hard to log them quickly enough to keep up! At one point, our operater on 20 meters was up to 66 QSOs per hour on CW, and the novice was going even faster on 10 meter voice. It was so exciting, I went around to all the different operating positions, and tried my hand

at most of them. In the evening, things started to slow down a bit,
and we were more occupied looking for dupes than anything else.
"That's a dupe, old man." was the most commonly heard remark.
Things started to get tricky when everyone was so tired, they
would forget whos callsign we were using, in the middle of a CQ.
Well, I don't know how we made it through the night without doing
anything really terrible, but when the sun shot up over the hills,
we were still plugging away. I was so tired, I would fall asleep
just logging, inbetween QSO's. When the contest finally ended, we
were all tired, but very happy. I went home and slept for 13 hours
right away, and they tell me I was acting rather strange that
night, kept muttering dididididahdah didah......
well, I think Field Day is an EXCELLENT activity, and I wish they
had it EVERY MONTH!!!
73 de Randy KB7ZJZ @ KB7WE.#WWA.WA.USA.NOAM

Final Note:
Thank you for reading Youthnet NEWS edition 006. Youthnet NEWS
is available via the Internet news groups under Rec.Radio.Info, and
Rec.Radio.misc. For more information, or for a news release to be
aired, please send me a note to my E-mail or packet address, and
include any specific information, and contact information. If you
have not yet seen Youthnet NEWS ed. 005, I might be able to
explain. The reason Youthnet NEWS 006 is in parts is to keep the
packet forwarding system happy. If any message exceeds a certain
amount, it will not be forwarded.
Additionally, I need help in passing these bulletins around
the world. Unfortunately, that is not possible any more, due to
amount of extraordinary and unclear messages sent world wide. I am
looking for other hams who may want to receive this bulletin on
different continents, so I can forward it to them, and have them
forward it to their own area. If you would like to do this for me,
please send me a message, and wait for further instructions. DO NOT
forward this message via packet with out first notifying me (I do
not want any double bulletins to be forwarded at the same time).
Thank you again for reading Youthnet NEWS ed. 006. And I would like
to thank you all for your comments and contributions.

73's DE Alex N9KYJ

Curious: "Technician Plus" is one of the *SIX* license classes listsed on
the new FCC Form 610. Wonder why they bothered if that class doesn't exist.

Another curiosity: no specific exemption is made in the rules regarding
the expiration of CSCEs for Tech+ hams - those too should expire in 365
days - but they don't.

Greater than 2 MeV Electron Fluence for 18 JUL is: 1.5E+09

SYNOPSIS OF ACTIVITY

SESC Synoptical data is valid from 17/2100Z to 18/2100Z.

Solar activity was at low levels. Region 7758 (S12E66)
was assigned today. There was a C3/SF flare from new Region
7758 at 1331UT. The greater than 2 MeV electron flux has been
at high levels.

Solar activity forecast: solar activity is expected to be
at very low to low levels.

The geomagnetic field has been at quiet to unsettled
levels for the past 24 hours.

STD: A weak sudden magnetic impulse was reported by Boulder at
01:14 UTC on 19 July, measuring only 9 nT. The source is
uncertain.

Geophysical activity forecast: the geomagnetic field is
expected to be at unsettled levels.

Event probabilities 19 jul-21 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 19 jul-21 jul

A. Middle Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

HF propagation conditions were normal over all regions.
Isolated and localized periods of minor signal degradation
may have affected some high-latitude regions early in the UTC
day. Near-normal to above-normal propagation is expected over
the next 3 days, through 21 July inclusive.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Greg brings up a good point, and I have had the same trouble with some
ham's fists. I don't know if it is getting "worse" with time, but it
sure feels like it. There are many, many CW ops that I will pass by
simply because their code is pretty hard to copy. I copy in my head, and
it makes it tough to keep up when I continually revise my estimates of
what was being sent :-). I personally make it a point of pride to send
nice code, and welcome comments over on 7040, where I hang out, or
up in the novice band when I move up there.

Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX
Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL,
JH4RHF, PA3ERC, VE3UOL, AD1C, KC1AG, BV5AF, K4CEF & Southeastern
Cluster Group, N4ZC, WD4R, KC7V, AD8V, KB8RJ, KD8JN and KG9N for the
following DX information.

0S, PRINCIPALITY OF SEBORGA. Stations 0S1A and 0S1B still contune to be
active, mainly on 20 meters, CW, SSB and at various times. Remember!
WORK FIRST WORRY LATER! (WFWL) The following information was relayed to
OPDX from the Southeastern Cluster Group:
Paulo, I2UIY, who just completed the 1A0KM operation, says the
0S1A/0S1B was operating on "bogus credentials". It seems this

"Principality of Seborga" is something on the order of New Orlean's Mardi Gras. Each year this town of Seborga has a parade and names a "PRINCE" for the celebration. The "PRINCE" sold the license to the father/son Italian duo. Paulo states an investigation is underway by the Italian FCC because of the unauthorized transmissions using an illegel callsign.

9A, CROATIA. Jacky, F2CW, who left Pakistan in December, has been working for the Red Cross in Croatia the past 6 months. Jacky has been somewhat active as 9A/F2CW, but expects to receive the callsign 9A5CW shortly. He also holds the call T9/F2CW (Bosnia-Heregovina) but has not activated it yet. His activity has been mainly on CW with very little SSB operations. Jacky will try to be active also on RTTY, Pactor and AMTOR. QSL 9A/F2CW, 9A5CW and T9/F2CW to KC7V.

BO0M, MAZU ISLANDS, TAIWAN (ROC). In a news release from the CTARL: A group will activate BO0M from Mazu Islands, July 21-31st. The frequencies for SSB are 7060, 14260, 21260 and 28460 kHz. There will also be some CW and satellite activity. The location of the islands are: 26.158 North and 119.778 East. Here is the huge list of operators: BV5AF (leader of DXpedition), BV2AD, BV2AP, BV2CB, BV2DD, BV2HH, BV2KI, BV2OL, BV2QB, BV2RD, BV2TA, BV2WC, BV4AS, BV4BN, BV4IK, BV7FC, and JP1RIW. QSL via BV2KI, P.O. Box 84-609, Taipei 100, Taiwan, ROC.

C6, BAHAMAS. Chuck, KG9N, will be active from the Little Bahamas Bank Group on the island of Abaco (NA-080) as KG9N/C6A, August 3-9th. He plans to be active in the North American QSO Party (1800z Aug. 6th to 0600z Aug. 7th). With a R7 vertical (and maybe a long for 40/80 meters), Chuck will be operating mainly on CW (up 25 kHz from edge), but will be on SSB on 14195 kHz around 0300z daily. There may be some 6 meter activity, if Chuck can find a rig.

GM0, ISLE OF MULL (EU-008), SCOTLAND. Jack, KB8RJ, will be active from this Inner Hebredes Group as GM0/KB8RJ, August 8-20th. Activity will be SSB only on 14260, 21260, 28460 and 7 MHz if conditions permit. There is a possible chance for other Scottish Isles to be active if time permits one week before/after. QSL to CBA.

HB0, LIECHTENSTEIN. Members of the Contestgroup Oude Maas (PI4COM) will be signing HB0/PA3ERC from Malbun, Liechtenstein, July 17-24th. Operators PA3ERC, PA3BBP, PA3EWP and PA3GBQ will active on 160-10 meters, including the WARC bands, CW, SSB and RTTY. QSL via PA3ERC.

HL, SOUTH KOREA. Del, HL9DC, an American from Ohio, is active from Wonju, South Korea. His length of stay is unknown at this time, but he likes working stateside stations. He was heard recently 14025 kHz around 1200z. Also check the bottom edge of 7 MHz between 1100-1200z. QSL via N7RO.

P4, ARUBA. Hiro/JR4PMX, Jun/JH4RHF and his wife Kumiko/JR4DUW will be active for one week on Aruba starting August 24th. Jun's call will be P40S, Kumiko's will be P40YL and Hiro's was not available at this time. Activity will be on 160-10 meters, CW, SSB and RTTY. QSL to their

callbook address (CBA).

SPECIAL EVENT STATION. The Canton Amateur Radio Club will operate "W8AL" to celebrate the "Pro Football Hall of Fame Greatest Weekend", July 25th through July 31st from 1400 to 0200z. QSL and certificate will be available for contacts. Operation will be on:
SSB - 3870, 7270, 14270, 18150, 21350, 24950 and 28350 kHz
CW - 3700, 7125, 10120, 14050, 18080, 21125, 24910 and 28125 kHz

There will also be RTTY, Packet, AMTOR, satellite, 2 & 6 meter FM/SSB. For an unfolded certificate, send your QSL with "contact number" and a 9 x 12 SASE, with two units of first-class postage. For a QSL or a folded certificate, send your QSL with "contact number" and an envelope (#10 business size) SASE to Randy Phelps, KD8JN, 1226 Delverne Ave, SW, Canton, Ohio 44710-1306. SWL's are Welcome!

SU, EGYPT. Ayman, SU1AY, was heard in Cairo, on the 14226 DX net around 0000z. QSL via OE6EEG.

ZD8LII QSL MANAGER. Ed, AD8V, states he has been receiving cards for QSL requests for ZD8LII from time to time, but he is NOT or has NEVER acted as his QSL Manager. QSL ZD8LII to G0LII.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Subject: READ: Ham Radio Community Resources (Long)
To: info-hams@ucsd.edu

COMMUNITY RESOURCES IN HAM RADIO

Few people realize that a lot of VHF and UHF ham radio operating relies on community resources. What is a community resource? A community resource in ham radio is a service or equipment available to operators that can be used freely without cost.

Your local voice repeater is a community resource. Whether it be club or individually
owned, the repeater is available to all amateurs for their use. Some repeaters are
"closed" repeaters and are only available to a small group but most fit into the "open"
category. The hams that maintain these repeaters have invested their own time and
money to equip the station and keep it running. Most hams give little thought when
they key up a repeater to talk to their friends as to what it takes to keep supplying this
resource.

Many naturally take advantage of the situation and never give a second thought until
the repeater goes off the air. Equipment failure, lightning, and other events can cause a system to fail cutting off communications. This is when you tend to hear complaints

being shouted, "That darn repeater is off the air, AGAIN!". Little do people realize that it takes the effort of a few select people to climb up the hill late at night to do the repairs. These people give up their free time to keep this community resource going for all to enjoy.

Packet radio is full of community resources. Digipeaters, nodes, packet clusters, and
bulletin boards are all available for general ham use. Expensive dedicated computers, TNCs, and radio equipment comprise these stations. All this is unselfishly donated to the community resource pool for everyone to use. A lot of time is required to maintain these stations everyday, most of which is invisible to the user.

Another little recognized resource is the human resources. Our Volunteer Examiner
troops donate their time to bring new blood into the hobby through licensing exams.
Although they are "reimbursed" for their expenses, this payment is trivial compared to
what they contribute. Additionally, you have the convenience of having hams who will
take the time to answer questions from others or who will offer to help new hams get
started. These folks generously offer their knowledge and experiences to all those that ask.

What can you do to contribute to our community resources? Well, join the club that
sponsors your favorite repeater or packet node. Your dues go into helping maintain the equipment as well as other things. Most clubs struggle along financially but have
dynamite repeaters or packet stations that the ham community would surely miss. The
costs of the club's services largely outweigh the small dues payment.

Or, just say "thank you!". A simple thank you to the person or club is always
appreciated. To some, this makes it all worth while when someone shows their
appreciation. Most folks don't do this for the recognition or credit. They just enjoy giving but still welcome a simple thanks once in a while.

Help out by being a Volunteer Examiner if you can. Many groups can always use the
extra help during exams and your offer will not be turned down. Help the kid next door
get on ham radio or help the new ham find some used equipment to start his/her
station. There are many ways to contribute to the cause.

Now that you realize what a community resource is, it is amazing how often we use

these resources without even thinking about it. This is a shame because nowadays
most people won't give you the time of day on the street but we have such an abundant supply of generosity in ham radio. Let's not lose what we have. It's always easier to keep the momentum going than to start from scratch. Do something!

Your comments and suggestions are welcomed. Please send email to: RobB873302@aol.com or write: Rob Bellville, N1NTE, PO Box 892, Northboro, MA

CQ Video Wins CINDY Award

[Hicksville, NY] -- Ham Radio Horizons, the CQ video introduction to amateur radio, has been awarded a bronze medal in the Association of Visual Communicators' 1994 CINDY awards competition. The CINDY awards honor outstanding productions in all fields of non-theatrical video programming , including radio, television, cable and non-broadcast categories. Ham Radio Horizons won in the "public service & information" category. The Association of Visual Communicators is a non-profit professional association formed in 1957. This was the 35th annual CINDY competition. ("CINDY" is derived from the award's original name, the CINema industry award.)
Ham Radio Horizons is part of the CQ Video Library, which offers introductory programs on a wide variety of amateur radio activities. It is a basic introduction to the hobby, focusing on the people and activities of ham radio. It was also honored earlier this year as a finalist in the New York Festivals competition and received Honorable Mention in the International Television Association's New Jersey Awards competition.
Ham Radio Horizons was written, produced and directed by Rich Moseson, NW2L, who is also Executive Producer of the CQ Video Library, a division of CQ Communications, Inc., publishers of a

variety of radio-related books and magazines, including its flagship, CQ Magazine, Popular Communications and Communications Quarterly. Richard Ross, K2MGA, is President and Publisher.
I'm one of the lucky persons able to watch this video. I would recommend it to anyone to use this video if they are to teach an introduction ham radio class. Guest appearances on this video are, Carole Perry WB2MGP, a teacher in New York who uses ham radio in her classroom, Sam Garret, AA0CR, columnist for Worldradio magazine; former Sen. Barry Goldwater, K7UGA; King Hussein of Jorden, JY1, and many more. This video has helpful hints on what to do before and after one becomes licensed. Also, it gives the average person of an idea of who they will bump into on the air waves. Their are other topics of this video which is geared toward the young, YL's, Handi-Hams, the retired and much much more. Most importantly, this video shows phone numbers and addresses of various ham radio organizations to contact for more information.
The 1994 CINDY Awards were presented in June at the INFOCOMM trade show in Los Angeles.

Special Thanks to Rich Moseson NW2L.

Feedback: Field day Aftermath

From:KB7ZJZ@KB7WE.#WWA.WA.USA.NOAM

Hello, Alex. I just read your Youthnet NEWS 005, and was happy to find it. Pretty good idea. You mentioned Field Day, so I thought I would share my expiriences with Field Day.
This last Field Day was my first ever. I have been a ham for about 9 months and am a General class licencee. I have read about field day and heard about it quite a bit, so when I got the chance to go to one, I was very excited.
I went with the Jefferson County Amateur Radio club, and we operated as a 3A WWA from an old army base, Fort Worden, on top of an old radar sight.
We had a great time putting up antennas on Friday, in preparation for the contest. I learned more about antenna theory and practicible ideas for putting them up in that one afternoon than I have in all my life! It was ham radio at warp speed, and very thrilling. The highlight of that day was when we tried out the antennas, and I got a 599 from Finland on 20 meter CW! I was so excited, it was hard to get to sleep, even after a long day putting up antennas.
The next day, we started right at the first minute of contest, and got out into everywhere! The novice station was pulling them in from the east coast on 10 meters, working on an 80 meter loop, and the QSOs were coming so fast and thick, it was hard to log them quickly enough to keep up! At one point, our operater on 20 meters was up to 66 QSOs per hour on CW, and the novice was going even faster on 10 meter voice. It was so exciting, I went around to all the different operating positions, and tried my hand

at most of them. In the evening, things started to slow down a bit,
and we were more occupied looking for dupes than anything else.
"That's a dupe, old man." was the most commonly heard remark.
Things started to get tricky when everyone was so tired, they
would forget whos callsign we were using, in the middle of a CQ.
Well, I don't know how we made it through the night without doing
anything really terrible, but when the sun shot up over the hills,
we were still plugging away. I was so tired, I would fall asleep
just logging, inbetween QSO's. When the contest finally ended, we
were all tired, but very happy. I went home and slept for 13 hours
right away, and they tell me I was acting rather strange that
night, kept muttering dididididahdah didah......
well, I think Field Day is an EXCELLENT activity, and I wish they
had it EVERY MONTH!!!
73 de Randy KB7ZJZ @ KB7WE.#WWA.WA.USA.NOAM

Final Note:
Thank you for reading Youthnet NEWS edition 006. Youthnet NEWS
is available via the Internet news groups under Rec.Radio.Info, and
Rec.Radio.misc. For more information, or for a news release to be
aired, please send me a note to my E-mail or packet address, and
include any specific information, and contact information. If you
have not yet seen Youthnet NEWS ed. 005, I might be able to
explain. The reason Youthnet NEWS 006 is in parts is to keep the
packet forwarding system happy. If any message exceeds a certain
amount, it will not be forwarded.
Additionally, I need help in passing these bulletins around
the world. Unfortunately, that is not possible any more, due to
amount of extraordinary and unclear messages sent world wide. I am
looking for other hams who may want to receive this bulletin on
different continents, so I can forward it to them, and have them
forward it to their own area. If you would like to do this for me,
please send me a message, and wait for further instructions. DO NOT
forward this message via packet with out first notifying me (I do
not want any double bulletins to be forwarded at the same time).
Thank you again for reading Youthnet NEWS ed. 006. And I would like
to thank you all for your comments and contributions.

73's DE Alex N9KYJ

1077. Connecticut QSO Party 30-31 July

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-20 12:54:50 UTC
From: Anonymous User <nobody@soda.berkeley.edu>
Message-ID: <30j6qq$b34@agate.berkeley.edu>
Source record: 263180

The Candlewood Amateur Radio Association (CARA) will sponsor the
1994 Connecticut QSO party, to be held 30 JUL 2000 to 31 JUL 0400
UTC and 31 JUL 1200-2000 UTC. Bands will be 160, 80, 40, 20, 15,
10, 6 & 2m. Stations may be worked once per mode on each band.
CARA will operate W1AW (the ARRL station Hiram Maxim memorial
station) on Sunday, 31 JUL. As well the club station, W1QI, will
operate throughout the contest.

Plaques will be awarded to first place CT stations for several
categories. Certificates will be awarded first place stations in
other states, as well as second and third place in all states.

To all those who participate, good luck. To those that don't, if
you hear a station calling CQ Connecticut QSO Party, by all
means, pick up the mike and reply!

For an operating package, contact Frank, N8WXQ, (address
in Callbook).

>Today is the last day right?

Tuesday evening (local) various times I worked (from Northwest Indiana):

Johnson Space Center, W5RRR (Houston, TX) - 14.238

Kennedy Space Center, KC4TCV (Florida) - 14.236

Jet Propultion Laboratory W6VIO (Pasadena, CA) - 14.2445

Marshall Space Flight Center, WA4NZD (Alabama) - 7.236

NASA HQ, N4ZR (Outside Wash DC) - 7.238

I also heard:

NASA Ames Research Center, K6MF (Moffett Field, CA) - 14.251

I heard on the air last night that there are 12 stations operating (1 in Guam)
and that they will be operating until 0500z July 22.

1079. No code tech./CB/not shedding a tear

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-20 13:01:18 UTC
From: slama@ctron.com
Message-ID: <30j76uINN1su@dur-news.ctron.com>
Source record: 263197

This would be addressed to those critical of the tech. no-code class and those interested in this thread.

It has been my experience that the CB band is a repository for unregulated communication of a indeterminate nature. Listening to it reminds me of a nursery school with no supervision. The profane language and lack of courtesy is sad. Please bear in mind that I realize that CB traffic is regional and may differ, so I suppose I can not make any generalizations.

However, because of the tech. no code exam, I have been able to use 2 meter. The "type" of people (ie HAM operators) on HAM bands, exercise a great degree of courtesy and respect (There are exceptions to every rule).
Because of the technical skill and interest, I suspect that most of the troublemakers of CB will be content with turning a dial to a simple channel. I am not convinced that HAM radio will ever become as chaotic and "unappealing" as CB.

My point is that because of the no-code tech license, I have been afforded the opportunity to get a "taste" of this hobby. I like the taste, and I assure you that I will continue to upgrade my license. I wouldn't be so skeptical of the no-code class.

>is wholly domestic and doesn't involve international radio transfer
>of messages which is the only thing that 97.115 addresses.

No, sorry, but you're overstating the case a bit. The key is in the
definition of third-party communications. In 97.3(a)(42) it states
that third-party communications are "A message from the control
operator (first party) of an amateur station to another amateur
station control operator (second party) on behalf of another person
(third party). If you're merely reading a letter sent to you, it's
not third-party by this definition. If the letter is to the ham you're
reading it to and not to you, then it IS third-party communications,
and the rules apply.

In the case that started this discussion, the ham running the local
and remote nodes that are transfering the EMail is the control
operator for both stations, and thuse is both parties under these
rules. He would be responsible for any third-party communications that
are transmitted, regardless of the source.

>
>Remember too that the USA (i.e. the FCC) doesn't care about third
>party traffic and that the basis for 97.115 is really to alert US
>hams that they should respect the no-third party rules of other
>countries. After all, in the event that a US ham violated 97.115, who would
>be the complaining party?

The FCC would be the complaining party. Part 97.115 says "A amateur
station may transmit messages for a third party to:..." and lists the
conditions. Nowhere does it say that the FCC "doesn't care," nor does
it say that it's only there as an alert or warning. It's part of the
rules that govern amateur radio in the US.

>
>So, let's enjoy the hobby. Let's certainly be aware and respect the
>FCC rules, but let's not get so bogged down in minutia that we see

>
> Dave

In Hints and Kinks by the ARRL a few years ago, an article by a British ham described how to revive a Nicad by adding distilled water. He drilled a small hole thru the center of the anode. He inserted a syringe needle thru the whole thru the rubber pressure seal and added about 3 ml of distilled water to a AA size nicad. The rubber pressure seal supposedly closes enough to prevent a leak. The battery is allowed to sit overnite while the water disperses into the battery. He then recharged it to near full capacity.

I tried this myself and surprisingly, it works. You don't get the full rating you had before but I got about another year of good use for my HT nicads. They were 5 years old and wouldn't hold a charge. The author of the article stated the batteries dry out and adding real electrolyte would be better but said the distilled water was good enough. I haven't done it since, I like a rotating my nicads every 3 years now for reliability.

> fist of old farts sending with bugs :)

Not so oh wise one. Many folks coming into amateur radio today are not trying to emulate anyone. They have minds of their own and the whole world is a Burger King. They want it THEIR way. They don't need Elmers anymore...Elmers are all old farts. What do they know? They're all pro-code, keep it that way forever conservatives.

Any so called "old farts" you are hearing, nowadays, are those who managed to squeak by on the code exam and pass the Extra written after 72 tries of taking every exam the VE teams (team hopping) have available. And this is all during one two week period! [Not my experience...I'm a VE and a young Old Fart]

> While you're at it, ask the Elmers to check *their* sending. I was

I like it better when someone tells me I'm fat. THEN, I tell them they're ugly and that I can lose weight. (Shades of Sir Winston).
But what you are saying is true. Again, their world is one big Burger King. Everyone wants it their way. There's no such thing as constructive criticism anymore. The pilot lights to everyone's flame throwers are always lit too. Especially on the information superhighway.

> How come there's no Q-signal, like QFS, for "Your fist sucks/Does my
> fist suck?"

ROTFLMAO!!! I love this one Shawn!!! This is great! Can I use it in my next cw QSO?... QFS, QRK MINUS 1 73 SK DE WK1V (Electronic keyer used here)

[Back in me Novice days cw ops used to ask me what kind of keyer I was using whilst I was using a straight key] ask AA4GZ; when he was KQ5I he was always asking. Now I am ashamed to say that after 12 years of using an electronic keyer....My straight key sending sucks. I can almost make it sound as if I was using a bug, it's readable but too many errors.....Yuk!

> I bet I'm not alone in having blamed QRN, QRM & QSB for being unable to copy
> what people are sending.

No you're not alone Shawn. Why just the other day....

RSV> Hello from Mexico!

RSV> I am looking for a BBS door that give you access to a packet TNC. Any
RSV> suggestions and/or experiences? Any FTP site?

I've had been successfully using TNCDOOR, although when I switched to OS/2, the program ran into all kinds of problems. There are 3 versions of TNCDOOR out there, TNCDR104.ZIP, TNCDR105.ZIP, TNCDR106.ZIP.

I had a LOT of problems with 105 and 106. Under DOS, 106 has the nasty habit of rebooting my multi-line bbs every time someone drops carrier. Even registering the program didn't help, so I went with 104. In my opinion, 104 the version to use. Also, the author says that 105 and 106 aren't crippled if not registered, but I suspect this isn't the case. If you use it, you should register it -- but likewise, it shouldn't be stated in the docs that it isn't crippled if it really is.

Give it a try. I don't know an FTP site, but you can download it in the Chicago area from Radio Hobby Online bbs at 1-708-238-1901.

Am I the only ham in the newsgroup that is getting tired of listening to the whining about how long it takes to get a license back from the FCC?

I can certainly appreciate the complaints, as I waited for SIX MONTHS to get my novice license in 1975-6 because of the CB Boom.

What just popped my cork was a message from a 2x2 Advanced class ham complaining about not having his "Extra" license in his hands yet... Hey, do you guys know that in the dark-ages of ham radio, you waited WEEKS to even USE your new privledges? That was before we had instant upgrades. Heck, back then, you had to sit and take the test in front of some steelly-eyed, cold-blooded, FCC clerk! Not your friendly, local VE!

I would love to see "instant licences" and my own experiences pushed me to pettion the FCC and my congressman to initiate the "instant upgrade" system that we have today. But this complaining is getting really OLD. I mean, you guys waited 20 or 30 years to even get interested in ham radio, it's not going away (yet). The FCC doesn't love you like *I* and most other hams do, you complain loud enough and the FCC will do something to fix the problem, that's for sure... and when did the Feds do anything right for you recently?

The new QST said something about receiving a license with the w/HF designation if 1B was passed after June 6, or threabouts. On June 13, the ARRL sent me a post card asking for a copy of my Technician class license so that they could attach it to a May 21 610 that would have made me Technician w/HF.

1097. Jupiter decametric emission info

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-20 16:20:08 UTC
From: pharden@Mr-Hyde.aoc.nrao.edu
Message-ID: <1994Jul20.162008.24927@Mr-Hyde.aoc.nrao.edu>
Source record: 263200

Here is some basic information regarding Jovian decametric emissions to help answer some of the questions thus far raised on the net.

1. Jupiter has a strong magnetic field consisting of three lobes labeled A,B and C (A the strongest). Decametric emissions are produced by electrons escaping this magnetic field, which depart in a very narrow beam. This resulting decametric emission is heard on the earth when these magnetic fields "sweep" the earth and are referred to as an A,B or C storm. Thus, one must use the prediction tables available from several sources when enhanced activity is most probable. Also, moon Io exerts a strong influence on these emissions when the geometry of Jupiter-Earth-Io are in certain configurations. These are called Io-A, Io-B and Io-C events. Again, the times of enhanced activity caused by these Io events are found on the prediction charts.
2. The dominant emission from Jupiter are L-bursts, which usually arrive in bunches over several minutes called storms. Right now, Jupiter is very quiet and it is not unusual for several rotations to go by with NO activity. And when activity does occur, it is a short duration event (a few minutes of bursts out of hours!).
3. Very few of the bursts, pops and cracks heard above the MUF in the evening can be attributed to Jupiter. From #2 above, it is stressed that Jovian decametric activity right now is very infrequent.
4. It is impossible to isolate the origin of a signal with a single antenna. The best way to identify Jupiter is with listening practice, after many evenings, to learn what the L-bursts sound like. The professional arrays monitoring Jupiter are huge dipole arrays with very narrow beam widths (2-3 degrees) and very high gains. Also, an array of antennas can measure the phase delay of an incoming signal as received by each antenna. If the signal comes from space, it will strike each antenna about the same time; if it comes from earth, the signal will slide across the antennas one-at-a-time. Thus, only coherent signals (those arrive about the same time) are processed as coming from space. With a single antenna, even a directional high-gain yagi, it is still impossible to determine the source of a received signal ... especially a burst of noise.
5. The Japanese reported a 10-fold increase in radio emissions from Jupiter. This statement was taken a bit out of context and needs some clarification. The Japanese detected strong L-bursts for about 10 minutes of duration around 0700 UTC, about 30 minutes prior to the G fragment impact on 18JUL. It is tentatively believed these decametric emissions were triggered by the fragment as it penetrated Jupiter's magnetic field just prior to impact. This reported event lasted only about 10 minutes on the G-impact only. (I think the Japanese array operates around 22mHz). If verified, this could be

the only true decametric effect from the impacts thus far.
6. Don't let me discourage you. I have been conducting a Jupiter watch on 18 and 22mHz nightly from my back yard since June 20. I have heard some L-bursts on 18mHz with a vertical. On 22mHz, I am using a home-brew DDRR loop about 4.5ft in dia. It is not impossible to hear Jupiter on a 15M ham station.
7. Use these guidelines for listening to Jupiter:
a. Listen to upper end of 15M (21.4 to 22 if you can) in the evening. Best is when the MUF falls below 21mHz (15M is dead). This will at least shut down a bunch of earth generated signals and noise.
b. L-bursts are generated with highest probability during an A-storm or Io-A and Io-B events. See prediction charts.
c. There may be a possibility of L-bursts 30-45 min. before a comet fragment impact (as it passes through the magnetic field). Again, use the impact prediction charts.
d. If possible, disable the AGC so the bursts are not compressed.
e. With a directional 15M beam, point it south or southwest. Jupiter is very bright to the south-southwest early evening. To the far west early evening is Venus. Don't fall for her!

Good luck and hope this information helps.

1098. Jupiter emission/impact predictions

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-20 16:23:45 UTC
From: pharden@Mr-Hyde.aoc.nrao.edu
Message-ID: <1994Jul20.162345.25208@Mr-Hyde.aoc.nrao.edu>
Source record: 263201

PREDICTIONS OF JUPITER/SL-9 IMPACTS FAVORABLE FOR DECAMETRIC MONITORING
(Fragments A to Q removed in this revision due to already occuring or
not visable in North America).

FRAGMENT 7b=Q2 IMPACT 20JUL 1932 UTC = 20JUL 1532 EDT
7a=Q1 IMPACT 20JUL 1959 UTC = 20JUL 1559 EDT
Very slim chance of observing ... sun is high in the sky and Jupiter is
just rising on east coast. Jupiter is in a C-storm alignment, and thus
most likely very quiet. Solar interference will render most stations
unsuitable for detecting Jovian emissions.

FRAGMENT 6=R IMPACT 21JUL 0524 UTC = 0124 EDT = 20JUL 2324 MDT
Impact Long.= 036 deg CML=298 ("C" region)
Very good window for observing; impact during a relatively quiet C-storm
alignment and late evening across the country.

FRAGMENT 2=V IMPACT 22JUL 0415 UTC = 0015 EDT = 21JUL 2215 MDT
Impact Long.=145 deg CML=044 (quiet region)
Another good window for observing; impact during a Jovian quiet time
(all magnetic lobes away from the earth) and during evening across the
country. Extreme west coast will be in twilight.

FRAGMENT 1=W IMPACT 22JUL 0756 UTC = 0356 EDT = 0156 MDT
Impact Long.=278 deg CML=180 ("B" region)
Last chance for you night owls! Jupiter will have set in eastern states,
but good in the west. Jupiter begins B-storm, so some L-bursts associated
with that alignment may occur. (Historically quiet past few weeks)

NOTES:
1. Impact times from JPL/Caltech/Cornell calculations
2. Edifications by Dr. Pat Palmer (U. of Ill. Urbana) and NRAO staff.
3. Compiled by Paul Harden. For information only and does not constitute
any guaranteed detection of Jovian emissions by amateur observing
stations. May be freely distributed with credit.
4. Impact times rounded to nearest minute. CML=system III longitude
facing the earth; Impact Long. in System III coordinates.
5. Not all bursts heard are Jovian; it is impossible to determine the
origin of bursts with a single antenna configuration.

73 and good luck ...
Paul Harden, NA5N

I have seen QST on the news stand at Books a Million in Jackson, Mississippi. It has a different cover on it and titles of some of the main articles. It is dated July-August 1994.

since I don't have a csce, I guess my 1980 novice ticket will have to suffice... In reality I'm a tech+g. I took my tech exam at the second to last fcc given exam session in boston (tech ticket dated 1981).

In your case, Eric, it may merely be that your ticket got through the system before they started adding "plus" to tech plus licenses. Or maybe they're not going back to check every renewal that comes in to see whether it should be changed from tech to tech plus.

I wouldn't worry. In fact, you could upgrade and forget the whole problem :-)

To put up your own repeater, I'd recommend getting a Motorola Micor mobile.
They can be had for as little as $10 (or as much as $100). Very easy to
convert into a repeater. If you can't afford a duplexer, just run two
antennas (one for the tx, one for the rx). After it is up a while, people
will start popping on, and you'll make friends and supporters in no time.
I did that here in Sacramento. The hardest part is getting a site for the
repeater. It can be done at no cost, but will take some ingenuity.

This brings up a point I've been meaning to ask about for quite some time.
I've been a ham for years, and have heard many references to different
Motorola radio models and/or alphanumeric codes. Does anyone out there
have a cross-reference list, pointers to a FAQ, etc., which tell what
models cover what bands? More importantly, how do I decode the
alphanumeric codes to figure out what band a particular Motorola rig I
might run across at a hamfest covers?

Thanks es 73,

Jeff

> voice communications.

You won't catch me teaching cw on CB. [Head bent over in shame]..however, where do you think I learned it? Yeah, it's the truth. From 1969 to 1972 I was doing mcw on CB. If anyone ever copied, "DO YOU COPY THIS STATION?" on cw on the CB band (Ch 22A) during this time, that was me.

I just want to say thanks to Chris in Ontario who helped and hopefully learned at the same time. We had some pretty good cw QSOs then. Wonder if Chris is a ham now too?

I didn't condone any type of illegal activity then nor do I condone it now. I did it then and I don't do it now....heck I have all amateur privileges now anyway and have been a ham since 1981. Time flies when you're having fun. For a bullfrog, time's fun when you're having flies.

To those who will jump on me for being honest and stating the above...stick it in your ear. Nothing I can do about it now. If your time machine works you can lend it to all of us and we will gladly fix our errs of the past. Like my ex-wife and the time Ronny and I....uh....oh....sorry.

Just having fun cruizin' the info highway.....

>
Wayne,

My 2 meter repeater club has a bunch of bicycle mobile folks.
They found that the bearings were causing a flux in the SWR which then
created noise on the HT's they were using. One fix for this problem
(At least of VHF) was to isolate the antenna from the bike frame,
many folks mount the antenna to the bike rack which intern is mounted to the
wheel where the noise get created. I would try out a tuned wire for a ground
and wrap it around a plastic tube and mount it like a tire pump somewhere on
the bike. Remember ground is 1/2 your antenna.

The 3-Hr Ap Indices for 18 JUL 94 are: 16 16 12 16 15 8 8 10
Greater than 2 MeV Electron Fluence for 19 JUL is: 9.9E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7757 (N13E37) is the
largest region on the disk and remained stable. The greater
than 2 MeV electron flux was at high levels.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet to active levels
for the past 24 hours. A brief period of activity was observed
at 0600Z then receded to quiet levels by 1500Z.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet. High latitude stations may see unsettled
levels at night.

Event probabilities 20 jul-22 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 20 jul-22 jul

A. Middle Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 15/15/15
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

HF propagation conditions were normal over all regions.
Similar near-normal to perhaps slightly above-normal
propagation is expected over the next 3 days, through 22 July
inclusive.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,

Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Source record: 263207

Due to conditions beyond our control, the Melbourne, Florida, number for the Amateur Radio Newsline will not have the July 29th tape running until August 3rd.

This is due to all who are involved with keeping this line running having prior committments that wrap around that weekend and no one will be available to make a new tape to update the answering machine at (407) 259-4479.

This delay affects this number only. It is possible that there will be a similar delay the weekend of September 10th. For these times, we recommend calling (805) 296-2407.

Those calling (407) 259-4479 should hear the July 22nd edition of Newsline.

Thank you....73, bill wb9ivr
Collins Amateur Radio Club/Melbourne, Florida.

>A few hours on the Novice bands the other evening convinced me that
>we're neglecting a critical area of training, and that is the area
>of sending intelligible CW. Greg

Hi Greg, I couldn't agree with you more. When I took my CW exam to obtain W(N)5DXP at the FCC in 1953, they required me to send as well as receive. A lot of today's Novices would flunk that CW exam because of the problem you mention. If the FCC and hams are serious about the CW requirement, then the sending test should be reinstated. At the very least, the people who pass the receiving portion of the code test should be required to send and get graded on their sending even if it doesn't count toward the license. Grades could range from 'A' for a perfect fist to 'F' for unintelligible. It would be up to the individual then to choose to do something about his/her fist. Or maybe the ham community could just recommend against straight keys for beginners like we recommend against cathode keyed oscillators.

>

Well stated, Fred. I and my 12 year old son Eric are new hams (since 6/21). We had the good fortune of receiving our licenses before leaving on a 3-week trip to California and back. With our new calls and a new 2m mobile in the van, ham radio helped pass the long hours on the road. We had -great- time making contacts. Since I was driving, my son did most of the radio work. All along our route he was welcomed, congratulated, and encouraged by all the hams we encountered. In Texas, in fact, we stopped at a Radio Shack to buy a log book to record all of the contacts. Eric got a load of practice and -confidence-, and I think it's safe to say ham radio has us hook, line, and sinker. Even my wife got into the act copying down call signs, names, and locations as Eric made the contacts. (Last night she told our ham classinstructor he's created -two- monsters... :-)). It made a great vacation even better. While I'm at it, thanks and 73's to the folks on the Zia Connection, the Bomb Squad (147.210 in southern CA), and Megalink, among many others.

We're both intending on upgrading to code eventually, but the Tech No-Code is what got us in and hooked. I doubt we would have had the incentive to go thru the code right off the bat. Now that we're in it, the incentive is there. And from my months of listening (the last few weeks from the Midwest to California), and several weeks of operation, the 2m I've heard is not CB in most areas (I know it is in some). I was a licensed CB

operator (KAHB4941 - can't believe I remember that), and I got out of it long ago for obvious reasons.

Those who constantly rail on the Tech No-Code license and No-Code ham -are- the ones doing ham radio a disservice, IMHO. Fortunately, we haven't encountered such folks - yet. Whining about it and waxing nostalgic about "the good ol' days" isn't going to change anything, and ham radio would be much better served with that energy going into finding ways to encourage new hams to become more interested and involved in the hobby.

In fact, during the recent QRP ARCI Homebrew Sprint (in a very decided lull in contacts) I tried working someone who was using about a 1.1:1 dash:dot ratio, but apparently the other operator didn't hear me (well, at 1.5W, I'm not surprised). It was kind of depressing hearing him calling CQ for so long without an answer.

If you still have a copy (the original is probably better) of your original Technician license, hang on to it! Even though your novice license will show that you passed the 5 wpm test, only the Technician license can show that you passed what is now considered element 3B. If you ever decide to upgrade to general, you can present the VEs with this license (and a copy for them to send on, of course :) and just have to pass the 13 wpm test.

>the length of the antennae at the given frequencies. With an ohm meter
>which uses a DC voltage, would the antennae appear as a short to ground?
>THanks for any information!
>

A dc short across the antenna input is normal. When I blew my R7 20 meter
trap it failed due to arcing between the capacitor plates. The trombone like
device is a capacitor with the u-shaped rod slider as one plate and the
tubes as the other. There is teflon dielectric. The teflon (or possibly
nylon) insulation gave out and caused a short.

You can check each trap individually with an ohmmeter. You don't have to
dissasemble the antenna. Just make sure each u-shaped rod is isolated from
the rest of the antenna.

There is also a very small capacitor in the tuning unit box that can fail.
If it does, it is quite obvious. JUst open the box and look for a vaporized
component. (I had smoke pouring out of the box when this happened to me.)

1121. License arrived...

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-20 21:06:00 UTC
From: fletcher@moho.uwyo.EDU
Message-ID: <199407202011.NAA18297@ucsd.edu>
Source record: 263217

Another trivial data point:

My girlfriend's license arrived in the mail yesterday (19-Jul-94)
after 15 weeks 4 days.

Callsign is KC7DPQ for those trying to predict thier own callsign...

Anecdote:

When I first became interested in amateur radio (1968) the average
turnaround time was 4 to 6 weeks. Then the 55 mile-per-hour speed limit was
jammed down the country's throat, CB became the most effective and popular
way to circumvent enforcement of the 55 mph limit, Part 95 license applications
swamped the FCC forcing them to get multiple P. O. Boxes (some dedicated to
individual services) and the wait slogged down to (GASP!) 9 weeks which is the
to-the-day time period I "endured" waiting for my license. Now we have
a 65 mph speed limit, no more multiple P. O. Boxes to force the Post Office to
do the sorting for the FCC, and a 17 week waiting period. It's typical that
a function of the government is not the least bit predictable from just the
data.

And George Bush isn't responsible for screwing the FCC up any more than
any other administration. LIBERAL and CONSERVATIVE administrations alike have
slit the throat of the FCC in a manner not unlike killing the controllers of
the messengers because of the messages.

Reid,
WB7CJO

>The rotate either the beam or the array (your choice, will call "antenna"
>from now on) REALLY REALLY fast - so much so that the receiving end
>can't even tell the antenna's spinning.
>

OK Scott..but you should use your hose hydrolic pressure to rotate the
antenna...Water shoots out the ends of the elements...does your lawn..
improves your grounding...and "Shoots" your signal out with greater
force in all directions..I think its called the "AquaPlane" antenna...

No Really...Ill give up my own un-patented fleshing out of your idea
right here..right now. (someone will grab this and run with it)
You take your computer controlled phased array verticals...use them as
a repeater RX antenna (omni on TX) Upon lack of signals..the processor
rapidly rotates the array with PIN diodes at 20RPM or more..When a signal
is encountered, the array Auto optimizes the incoming signal by looking
at a digitized AGC reading and stores its heading. It also tags the
signal by storing either a value representing its exact frequency
(discriminator output) or uses a TX fingerprint program on a soundblaster
card. The controller then accumulates all the stations positions and
starts rotating rapidly..only to those positions...continually auto
optimizing and updating the database. Upon loss of signal for a
predetermined time...full rotation scan continues.

Any Comments?

==========
STAFFING REQUIREMENTS REQUEST

Clearance Level: SECRET

New Position: Immediate
Project: Communications Engineering

Location: Arlington, VA

TITLE/LEVEL: Research Assistant/Consultant (A/I)

FUNCTION TITLE: Electrical Engineer (Communications)

JOB DESCRIPTION: Analyze radio and computer communications systems and design appropriate integration systems. Use established electromagnetic and circuit level theory. Apply modulation standards and protocols of the ITU-T Recommendations, IEEE/ANSI standards, and DOD MILSTDs, including elements of ITU-T V-series (V.22, 32, 42) and G-series. Design and implement graphical user interfaces for communications programs using C or Microsoft V- Basic. Perform communications tests and data collection. Write technical reports and performance analyses.

REQUIRED EXPERIENCE: Robust academic background in Electrical Engineering with a focus on radio communications. Practical experience in configuring transmitters, receivers, modems, antennas from HF through UHF, IBM-compatible PCs, MS-DOS, and Microsoft Windows. Practical experience with satellites, cellular, packet radio, and military or commercial telecommunications technical control facilities a plus. General or Advanced Class Amateur Radio License an asset.

SALARY RANGE: $25,000 - $35,000

EDUCATION REQUIREMENTS: BSEE. Robust academic background in Electrical Engineering with a focus on radio communications. Mathematics through Differential Equations, Probability Theory, and Introductory Statistics. Knowledge of Laplace, Fourier, and Z-transforms, Circuit Analysis, and Electromagnetic Theory a must. Data Communications and Communications Theory a plus. Control Theory, Systems Engineering, or Operations Analysis an asset.

COMMENTS: Communications interest and experience (military, amateur, or commercial) and general computer programming (Basic, Visual Basic, or FORTRAN) a must. Data communications and protocols (Internet, TCP/IP) a plus. U.S. Navy experience and satellite communications an asset.

1131. ROHN tower info, please

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-20 22:31:54 UTC
From: slay@netcom.com
Message-ID: <slayCt9Fx7.7EL@netcom.com>
Source record: 263087
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

I am looking for any or all of the following general and specific
information:

1) Street address, telephone, fax, and/or email for ROHN Towers.

2) Specific info on the HD 3-5-54G tower.
Is it a crank-up, fold-over, guyed or freestanding tower?
Is a bracket mount to the house required?
I presume it is 54ft, but do not know for sure.

3) Any idea if Rohn still makes this beast?

4) Is it likely that Rohn makes an updated version which may use the
same concrete mounting?

5) Is it "unusual" that the triangle formation of the mounting
bracket/bolts for Rohn towers are NOT equilateral triangles?
The concrete base I am looking at has a base width of the tower
appearing to be appox 21" althought the distance to the apex
of the triangle base seems to be approx 24" or so. So, perhaps
it was a fold-over mounting bracket? hmmmm

My reason for asking is that I am about to purchase a home built by
a Ham (now Silent Key), and if possible, I'd like to obtain the same
sort of tower .... or at least one that can use the same concrete
base.

Thanks and 73

JJ>Is there a new address or other route??
JJ>Thanks for any advice you might offer!

I just tried callsign.cs.buffalo.edu 2000 and pc.usl.edu 2000 and go
thru pretty fast (instantaneously). As for ns.risc.net, I've tried
various times over about a month and never got thru. I assume that
callserver has been shut down.

One thing that's important in teaching beginners a decent fist is making sure they have a decent key and a place where they can rest their arm properly. I lost my paddle (don't ask), and have been struggling with a really lousy, cheap old straight key, and I've definitely been running QFS (man, I _love_ that Q-signal. How do we make it 'official'?). I've given up until I can replace my paddle. Too embarrassing.

Author: Andrew C. MacAllister (Andy)

BLT-9 To the Edge of Space!

July 23, 1994 10 AM CDT

On July 23, 1994 the South Texas Balloon Launch Team will send its latest creation, BLT-9, to the edge of space. The launch will be from the Houston area. BLT-9 carries an elaborate array of devices all in a package weighing only six pounds, batteries included. YOU are invited to participate.
This launch represents a change in direction for the group. The focus this time is to replace devices and experiments that were lost when BLT-8 decided to take a dip in the Gulf of Mexico. This task has been more difficult than anticipated but most of the gear will be ready to go when launch day arrives.
The primary payload is a 3-Watt FM TV transmitter on 1280 MHz. The unit is new and has a specially designed collinear antenna for omni-directional vertical polarization. We expect good reception out beyond 300 miles. The CCD color camera was lost to the salt water so we will be using the high-resolution B&W unit that flew on BLT's 2, 3 and 4. It will be mounted in a special external pod with complete RC operation to look up at the balloon and sky, out to the horizon and straight down at the ground.
A packet digipeater will be flown using 440.950 MHz simplex, 1200 bps AX.25. Telemetry messages from the on-board computer will be sent as unconnected broadcast packets in ASCII text.
BLT-9 will have a single-channel voice transponder on board. The input is 147.435 MHz FM and the output is 29.4756 MHz DSB. The antennas are vertically polarized and the system is capable of one Watt output PEP. The receiver is relatively insensitive, but should be able to hear stronger stations.
Several beacons will be carried aloft. One is on 224.72 MHz (horizontal polarization) and is strictly for direction-finding purposes. A CW beacon with continuous carrier followed by a callsign ID can be heard on 28.322 MHz. This unit uses a full-length vertically polarized dipole. Another beacon on 29.420 MHz will send a CW "beeps" that correspond directly to the outside temperature. At 70 degrees F the beep rate is approximately 200 per minute. At -70 degrees F the rate is significantly slower. The antenna for this device is a two-meter dipole cut to enhance the 5th harmonic (147.1 MHz) of the transmitter for DF purposes.
The main package will also carry a 15-volt sulphur-dioxide lithium battery pack, a stabilization fin to minimize package spin and special electronics for remote cutdown of the package and a glider to be released during the ascent portion of the flight. The glider will carry its own computer and two-meter transmitter. It will send CW encoded telemetry on 144.34 MHz. An audio beeper will be attached to the outside of the package to aid in the final search after landing (no water please).

An informal HF net will be active on 7.155 MHz just before and during the flight. More details can be obtained from Burns Cleland WB5HLZ at home (210-625-5555) or at work (210-625-9500). In Houston check for more information on the final BLT pre-launch net on Friday the 22nd at 8 PM (146.10/70 repeater).

Hi, I'm interested in becoming a Ham Radio Operator. I understand
this requires study and testing, two things I am quite familiar with.
I've seen computer programs before which teach the skills required to
pass some of the license tests. If anyone could point me to an FTP
site, or a software company, I would appreciate it.

Drew --

I know that a lot of people think 1 minute of solid copy is tougher than fill-in-the-blanks, but it sure wasn't for me. I passed both 5 and 13 wpm by having well above a minute of solid copy in the middle of the test. Somehow, I think I was too nervous at the beginning and too tired at the end to get those !@$# callsigns!

We'll have to see what we can do about the small numbers of
ATV folks.

On a related note, anybody have any suggestions for an ATV transmitter
on 440? I believe it's one of the last pieces I need to work the
local ATV repeater.

Source record: 263093

TESLA

Few people recognize his name today, and even among those who do, the words Nikola Tesla are likely to summon up the image of a crackpot rather than an authentic scientific genius. But were you aware that Tesla was responsible for...

The Alternating Current Dynamo upon which American electricity is based. This AC system, which won out over Edisons DC system at the first major hydroelectric plant at Niagara Falls, and was the source of a lasting enmity between Tesla and Edison.

Arc lighting systems for street and factory use, fluorescent and neon lighting.

The science of Radio, as well as the first interplanetary listening device.

The first Solar Cell, the first radio controlled robots, the first X-Rays, the electric clock, the speedometer, electric refrigeration...

Tad Wises compelling novel resurrects one of the most fascinating fathers of the modern world -- a new Prometheus who toyed with natures mightiest forces, a wizard who harnessed the awesome power of Niagara Falls and learned to hurl lightning bolts like a demigod.

For more information on this novel and for a chance to win a free copy of TESLA, eMail Promobott@aol.com.

>Johnson Space Center

Yes, yes... But 'fess up, now... How many upgrades did they have to process over that period of time for you? ie - As you passed the Extra, you were still waiting for your Advanced ticket to show up, right? (Or maybe you were even still waiting for the General or Tech..)

I'm in the same situation. I'm waiting for the Extra, but had to send in a copy of my Advanced once I got that, so they could start processing the Extra upgrade. In the meantime, it just sat there... Matter of fact, I've really confused the ARRL/VEC and they even sent back one of my form 610's, and then couldn't really explain why they did it. But, we're getting through it together.. :) I can't remember where I put the calendar I'm keeping track of it with, but I think I'm around the 30th week...

1149. FCC is finally getting faster :-)

My XYL and younger harmonic passed their no-code tech on 26 APR. I passed
my upgrade to Tech Plus (plus the written part of the General, but not
the 13wpm code :-(on the same night. My elder harmonic passed her
upgrade to General on the same night.

The first 3 licenses arrived today, 20 JUL. Total time 12 weeks + 16 hours.
My elder daughter's upgrade did _not_ arrive today (maybe tomorrow).

BTW, _yes_, my new license does say TECH PLUS.
Even though it has a new issue date - 14 JUL, they did _not_ extend my
original expiration date (still 12 OCT 03). Envelope was postma
rked
18 JUL.

There's hope for those of you who are still waiting! Now we are a
whole "hamily".

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7757 (N13E22)
produced the largest flare of the day, a B6/SF at 20/1328Z.
This region is showing signs of decay. Other regions were
quiet.

Solar activity forecast: solar activity is expected to be
very low to low. Small flares are possible in Region 7757.

The geomagnetic field was quiet to unsettled. The greater
than 2 MeV electron flux at geosynchronous altitude was high.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 21 jul-23 jul

A. Middle Latitudes
Active 15/15/30
Minor Storm 05/05/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 15/15/30
Minor Storm 05/05/15
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
Good propagation was the order of the day. Similar good
propagation is expected through 22 July inclusive. Minor
high-latitude signal degradation may begin to be observed on
23 July in response to a recurrent disturbance.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>(man, I _love_ that Q-signal. How do we make it 'official'?). I've given
>up until I can replace my paddle. Too embarrassing.

I'm not sure who the original poster was, but I'll throw this out into the mix and see what kind of response I get. Anyway here's your big opportunity.

Why do CW operators send "BT" instead of "." ?

What is the proper in between transmission protocal?
ie:
I send: blah ... blah ... blah ... HOW COPY? xx#xx de N9WHG

and then the other station will pick it up with:
N9WHG de xx#xx blah ... blah ... blah

Should there be an "AR" after my "xx#xx de N9WHG" ?

I must confess that I have had HF privileges since I went on the air on 3/7/94, but have only recently used CW. First QSO was a couple of days ago. Have noticed already that, like sideband, CW operators have their own differing operation practices.

I realize this thread started in regards to "fist" technique, but I figured I would throw something else into the mix.

My first QSO was with WD4MWR in Tampa, FL. One of his parting comments was, "Nice fist." I had to then confess that I was using a paddle. Paddles make it easier once you get used to it, but I still need work on letter/word spacing. Ah, well. Like all things, practice makes perfect.

Steve, a nice little book to have with you is the ARRL repeater directory. It is fairly cheap and is usually good for a couple of years at least. :-)

I have tried to e-mail you a few different times before but it always seems to get returned. I have a question for you. Are you the same Steve Greenberg that used to live in Santa Rosa, CA and went to Montgomery High School? Brother named Allan? If so, remember me? Write back in e-mail as I know my address is good.

Please also count me in for an ATV newsgroup or mailing list.

On another note (no pun intended) with respect to CW on CB, if it is
not allowed, why do so many toy walkie talkies have morse code keys.
Just about any small CB has some kind of CW capability built right in.
Some even have the morse alphabet on a metal plaque glued to the front
of the radio.

Sorry for the wasted messages.

QST is available in Philadelphia at Tower Books. It is not available at Borders, but I haven't checked other chain stores yet.

The only differences are the "commercial" cover with teasers on articles, reviews, etc. and the color of the membership return envelope (yellow).

The price is 4.95 plus tax.

QST looks good on the newsstand. The cover is colorful and should attract interest.

73,

Jim Kelly

>More importantly, how do I decode the
>alphanumeric codes to figure out what band a particular Motorola rig I
>might run across at a hamfest covers?

Simple (incomplete) guide:

```
U44MHT1100A
||||||+++++--- Features present on radio; varies by series.
|||||+-------- Power source
||||+--------- Transmitter series within radio model
|||+---------- Receiver series within model
||+----------- Band (1=25-50,2=66-88,3=136-174,4=420-512,5=800-950)
|+------------ Output power level (generally 1=<1W,2=2-5W,3=5-25W,4=25-40W,
| 5=40-70W,6=70-90W,7=90-120W; varies by band)
+------------- Mounting method (commonly U=universal,D=dash,T=trunk,H=handheld)
```

The power levels are from memory and are approximate. Note that the only
indication of frequency range within each band is in the feature code; you're
best off asking what frequency the radio is on, or looking at a channel
element, or maybe finding a stamped marking somewhere on the radio, before you
buy.

Just a point, those low power wlakie talkies that have the code osc. transmit on CB chan 14. They however do not transmit cw. They transmit a tone by AMing it to the carrier. If the FCC is allowing that why not teach CW by keying the mike and playing a code practice osc. into it?

Tom Randolph (randolph@est.enet.dec.com) wrote:

: The July "RF Design" has an article on feed forward amplifiers. The basic idea
: is to tap off some of the input to the amp, delay it 180 degrees in phase, and
: combine this with some of the output of the amp. This gives you a signal
: composed of only the error added by the amp. Now you amplify this, phase it
: 180 degrees again, and combine it back into the power amp's output, to cancel
: out the error and get a nice, clean, IMD-free output.

Thats generally correct. Feedforward is being used for the new airphone
system on 848-851Mhz, the ground side. The amplifier handles 8 ch at
once so it eliminates the need for hybrid combiners. The system is free
of intermod, yet is power inefficient.. drawing 42A at 27v with only 60w
total rf output to the antenna.
A different type of linerization system is being used for the band
stolen from all of us on 220-222mhz. Since the band will contain 100
repeater pairs spaced 5khz using amplitude compandered SSB, a very linear
output stage is required. A cartesian loop is used to reduce 3rd, 5th &
7th etc order intermods to reduce adjacent channel interference.
Maybe someday, the cartesian loop can become simple enough to be used
on HF amplifiers to grab some extra power without loseing linearity on
ssb or am.

SB SAREX @ AMSAT $STS-65.018
Packet Metabeacons from Shuttle

Greenbelt, MD July 21, 1994 at 12:30 UTC

The following is a compilation of some of the packet radio metabeacons copied from the crew on the Space Shuttle Columbia. These were provided by Gil Carman, WA5NOM, and Andy MacAllister, WA5ZIB. The SAREX working group would like to extend its thanks all of you who have provided us feedback and downlink updates of the packet system during the STS-65 mission.

W5RRR-1>QST [07/12/94 17:17:00] :
Hello from KC5HBV and KC5FVF aboard the Space Shuttle Columbia
We're well into our mission now conducting materials processing and
life sciences experiments that are paving the way for future operations
aboard our international space station
We've talked to schools in Texas, Florida, Hawaii and Germany via SAREX
and it's been great

17-Jul-94 11:33:16 W5RRR-1*>QST :

Hello from KC5HBV and KC5FVF aboard the Space Shuttle Columbia
We're half way into our mission now conducting materials processing and
life sciences experiments that are paving the way for future operations
aboard our international space station
We've talked to schools in Texas, Florida, Hawaii, Louisiana Germany and
Japan via Sarex and really enjoyed their enthusiasm for space exploration
and amateur radio
Wishing you all the best on the upcoming 25th anniversary of humankinds
first steps on the Moon

20-Jul-94 10:21:27 W5RRR-1*>QST :
Greetings from the SAREX station aboard the space shuttle Columbia.
The crew of Columbia is privileged and honored on this 25th anniversary
of one of humankind's greatest achievements to follow in the footsteps
of our craft's namesake, the command module Columbia, which carried
Neil Armstrong, Buzz Aldrin and Michael Collins to the moon. We wish all of
you back on earth who are celebrating this historic anniversary our best
wishes and hope that the one small step for a man taken 25 years ago, will
be a giant leap for people of vision as we go on to International Space Station
and beyond.

21-Jul-94 12:01:17 W5RRR-1*>QST :
With the conclusion of this most successful mission, we wish everyone
on earth the very best and thank you for your support,

KC5HBV, KC5FVF and the rest of the STS-65 Crew.

1166. SAREX Keps/Entry Plasma Trail

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-21 13:14:36 UTC
From: ABFHB@abacus.gsfc.nasa.GOV
Message-ID: <940721091436.a94@abacus.gsfc.nasa.gov>
Source record: 263116

SB SAREX @ AMSAT $STS-65.019
SAREX Keps/Plasma Trail

Plasma Trail/Shuttle Reentry

People in the southern U.S. should have a very good view of the Space Shuttle entry plasma trail Friday morning. The prime deorbit opportunity is still on rev 219, which will land at KSC about 10 minutes after sunrise there, and pass over Houston, over College Station and Huntsville at 10:31 UTC, an hour before local sunrise. That should give a plasma arc across the sky with a peak of about 15 deg as seen from Houston. Shuttle landing is planned for 10:39 UTC at the Kennedy Space Center. Keep your eyes peeled!

[info provided by Gil Carman, WA5NOM]

SAREX Keplerian Elements

The following is the official SAREX orbital elements for today. These were generated by Ron Parise, WA4SIR, at the Goddard Space Flight Center, and adjusted to improve the drag term by Gil Carman, WA5NOM, of the Johnson Space Center.

STS-65
1 23173U 94039A 94202.29299650 0.00060047 00000-0 23046-3 0 457

Source record: 263119

>remember that we are just seeing the results of the prior Years under
>the Bush administration....no funding no technology upgrades and no new

must be a newbie. the backlog at the FCC started long after Prez. Clinton was elected. Things ran pretty smoothly under the previous presidents..has Clinton finally caught up with the appointments he should have been making? he was behind by quite a bit last year but there's been other news to cover so we don't hear about things like the G7 meetings, appointments not made, how the word "universal" no longer means "100%" and such in the general media.

the cold hard truth is it doesn't really matter who was in the white house. as long as they leave things alone and don't monkey with the works.

there are 2 things that have contributed to the backlog.

1) more people getting new licenses/renewals than ever before..

2) new services the FCC has to administer (such as cable tv regulation..)

and

3) switchover to a new computer system...

(the bowling alley took 3 weeks to change over from their old automatic scorers to the new ones and they were "plug compatible" by the same maker...)

So confess! or do i have to get the _Comfy Chair_!?

(_No One_ Expects The Spanish Inquistion!)

>operator (first party) of an amateur station to another amateur
>station control operator (second party) on behalf of another person
>(third party). If you're merely reading a letter sent to you, it's
>not third-party by this definition. If the letter is to the ham you're
>reading it to and not to you, then it IS third-party communications,
>and the rules apply.

Frankly, I doubt that such rules were made to address the current
environment and I'll treat it as such. If I receive a letter from
a friend in one of the "forbidden" third party countries that happens
include a message that says when I talk again to John Doe K2XYZ, please
say hello for me ...or let him know all is well, do you really think
hat the FCC intends to prohibit me from passing on that portion of
the letter over the air when I have a QSO with John Doe (where both
I and John Doe are located in the USA)? Clearly if that is the case,
then there are hundreds of such violations going on every day, at
least if you just listen to much of the rag chewing QSOs that go
on all the time.

>In the case that started this discussion, the ham running the local
>and remote nodes that are transfering the EMail is the control

And when was the last time you even heard of the FCC pursueing any
violation of 97.115?

>>So, let's enjoy the hobby. Let's certainly be aware and respect the
>>FCC rules, but let's not get so bogged down in minutia that we see
>>prohibitions at every turn.

>Obeying and respecting are two different things. How about taking the
>rules at face value, and following them as they're written?

I take the rules at my interpretation, not necessarily by strict
interpretation (the legal community deals in such an approach every day).
I am free to make mmy own judgements and stand by them.
Your strict/literal interpretation I believe is inconsistent with
common sense, as well as with what the FCC probably intended for
97.115 to prohibit. My interpretation, certainly in contrast to
yours, is subject to a final determination by the FCC if it ever
got that far (not likely).

Again, rules, laws, etc. also take on an element of
common sense in application which, unless the rule is challenged
may leave an otherwise overly strict rule on the books, despite
its lack of enforcement because there's just no reason to enforce
the rule. I always drive 55 on the highway...NOT :-) :-)

Newsgroups: rec.radio.amateur.misc,uk.radio.amateur
Summary:
Keywords:
X-Newsreader: TIN [version 1.2 PL0]

Well how many times have we heard that phrase. Unfortunately it's true. I
wonder how many (i think it's general licences in the US) 'A' licences use
morse on a regular basis?

I know you use it or lose it because I have. I was lucky I did a merchant navy
Radio Operators course at college and did morse at silly speeds.
So learning it was easy, as has been losing it.

I was at a friends house recently (a uk 'A' callsign) and we decided to
listen to some morse.

Both of us had problems copying what must have been around 12 wpm.

So just a thought for those out there sitting and thinking smugly
to themselves that they can do morse.

Have YOU lost it????

For what it is worth:

Last week I bought the July/August issue of QST off-the-shelf
at the TARGET across the street from work. This week I noticed
the stack was nearly gone. Target does not sell 73 or CQ. But
I _did_ appreciate the discount from the cover price.

But now that I realize my renewal didn't pass earlier spousal
screening, I intend to rejoin this weekend at the Atlanta
Hamfest. I hate having to peruse magazine shelves where all
the kiddies have been mauling the magazines with their chocolate
covered paws!

Demetre Koumanakos wrote:

> Does anyone have any idea what the Kenwood phone patch controller does ??

It is a full-function phone patch; the term "controller" is something of a misnomer; it doesn't "control" anything but itself. It links your transceiver transmit and receive audio to the phone line, and provides level setting on both. There are no DTMF functions, and it does not dial the phone for you (I know of no phone patches that will perform these functions; you may be confusing patches with modems, which typically do dial, auto-answer, etc.). In a typical installation, you would have the patch and a regular phone connected to the same line. You would dial using the phone, then switch over to the patch when you've reached the party on the phone and told them what's going on. They could then hold a conversation with the party on the radio, with you switching manually between transmit and receive for them. Since you didn't list a callsign, I'll also point out that there are restrictions on when and where you can make patches between the US and foreign countries. Only a few have "third party" agreements with the US permitting patches.

>But, otherwise, when did anyone ever care what happened on CB?

First off, if the idea is to teach ham radio boot-camp we probably don't want to start by violating regs, you know?

However, I can think of two ways around it:

1. Teach it by saying (or using a voice synthesizer to say) 'dah di dah di dah dah di dah'
2. Transmit the code on ten meters, and do the coaching 'that was an A' and discussion on CB (with the advantage of duplex operation. If you use MCW, then ANY cheap receiver ought to work.

I thought the accepted Q-signal was QLF. 8^)

QLF? "Are you sending with your left foot?"
QLF "I am sending with my left foot."

Many years ago, a New Jersey Net picnic had an ENORMOUS straight key
set up for us to attempt to send with our left feet. It was a riot!

> spacing. Ah, well. Like all things, practice makes perfect.

That was a pretty nice compliment to you regardless. I considered it a compliment when someone asked me what type of keyer I was using when I was using a straight key. Nowadays they would send QFS to me. My fist sucks on a straight key. I do use paddles and have since 1982.

I used to be able to use a straight key for the Dr. DX and Dr. QSO cartridges I have. That was about 12 years or so ago. Now I can't talk to the computer to save my life. I'm waiting for it to say QFS instead of diddihdahdahdidit, didah dahdahdit dahdit diddahdahdit dididit dit [" ? AGN PSE"] But....the paddles do me proud every time....oh well.

You state above, "Like all things, practice makes perfect." I just wanted to ask this smart-assed question:

If practice makes perfect...and nobody's perfect....why practice? &D

[[EXAMNT7.21 : 3171 in EXAMNT7.21]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
upwards of 14 weeks to process licenses (although as recently
as this week, some licenses have come through in six to eight weeks.
The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact

the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC recently has been taking
upwards of 14 weeks to process licenses (although as recently
as this week, some licenses have come through in six to eight weeks.
The FCC considers their processing time to be 90 days--from the date
they receive the application. The FCC usually receives the application
one to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will effective 6/8/94 receive a new license from
the FCC that reads "TECH PLUS." Such upgrades before that date
would not receive a new license but would need to retain the
existing Technician license plus the CSCE conveying the Morse
code test credit as the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on

recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to
MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

> Is a bracket mount to the house required?
> I presume it is 54ft, but do not know for sure.

>3) Any idea if Rohn still makes this beast?

Rohn towers are all basically guyed designs with an optional
fold-over. You buy as many sections as you want for the height
you're looking for. You control the wind load capability by
the choice of how heavy-duty you go in the sections you use.
The 54G does not mean it's a 54' tower, it just means that they
used Number 54G tower sections. I don't see those in the current
catalog, but for comparison, 55G is the current top-of-the-line
consumer tower.

I'd direct your other questions directly to Rohn.

We recently operated special event station OE1XRW/IMD and received about three hundred letters for a direct QSL. About a third of them with neither an IRC nor a greenstamp, About twenty letters with more than 1$ or more than one IRC, the rest with either 1$ or 1 IRC. Air Mail from Austria to the USA costs about 1,50$, to Japan about 2$. IRCs can be "cashed in" for a stamp worth 60 Cents. We spent more than 200$ to deliver direct QSLs. Are we "greedy" ?

1189. GB2RS News 24th July 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-21 18:12:51 UTC
From: dave@llondel.demon.co.uk
Message-ID: <774839571snx@llondel.demon.co.uk>
Source record: 263066
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 24th of July and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First the headlines:-

The new packet rules are clarified,

The very last chance to nominate the Young Amateur of the Year,

And we have some awards news.

A number of packet radio operators have asked for clarification of how the RA's new unattended operation rules will work in practice. Briefly, it is now necessary for anyone operating an unattended digital station to notify their local RIS office of that operation, and to inform them of how the station can be closed down in an emergency. This could include the telephone numbers of neighbours, or the whereabouts of an external mains switch.

The full wording of the new regulations, including the improved licence conditions for the 1.8 and 50MHz bands, is published in the August edition of Radio Communication which will be posted to all RSGB members this week. Non-members who would like a free copy should telephone RSGB Headquarters on 0707 659015 and ask for the Marketing Department.

The deadline for nominations for the Young Amateur of the Year is next weekend. If you know of anyone under the age of 18 who could qualify for this prestigious award, contact RSGB Headquarters urgently for an application form. Full details of the award and its rules can be found in the April edition of Radio Communication or from RSGB HQ.

Jack Brooker, G3JMB, has received an RSGB award for confirmed contacts on 10GHz with stations in 15 locator squares. This is only the second such award to be issued.

Two short-wave listeners have also received notable 50MHz awards: Bob Treacher, BRS32525, has been awarded the RSGB 200 squares certificate. And Netherlands listener, Jan Steenbergen, NL213, has been awarded a certificate for 140 countries confirmed.

Also on 50MHz, Robert Tweddell, G1RST, has gained the RSGB Senior transmitting certificate for 60 counties and 20 countries confirmed. He also has a Standard certificate for 40 counties and 12 countries, endorsed: 'All auroral contacts'.

Details of the RSGB VHF and UHF awards can be found in the RSGB Call Book or may be obtained from the VHF Awards Manager, Ian Cornes, G4OUT whose address is correct in the Call Book.

The Orkney two-metre repeater, GB3OC, will be going off the air for a thorough overhaul on Friday the 5th of August. The estimated time to carry out the work is about two months. For further details contact the repeater keeper GM3IBU, whose address is correct in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Iceland, DL3LAB and DK2OY will sign own-call/TF from Thursday the 28th until Wednesday the 10th of August on 10 to 80 metres.

From the Cayman Islands, JA7KAC/1 will be active from now until Friday the 29th of July on 10 to 80 metres. The "ZF" callsign to be used is not known.

From Fiji, the Shizuoka DX Group will be active using the 3D2 callsigns YH, AS, DR, PC and GS from Friday the 29th, until Tuesday the 2nd of August. Operation will be on all bands 10 to 80 metres, running three stations.

And from Svalbard, LA4LN and LB3RC will sign JW4LN and LB3RC/JW respective from the 1st to the 20th of August. Both are taking part in a scientific expedition but hope to be active on all bands, 10 to 160 metres on CW, SSB and RTTY.

Now the rallies we know of for today, Sunday the 24th of July:

The Colchester Radio and Computer Rally is being held at St Helena School, Sheepen Road, Colchester, adjacent to the Colchester inner bypass. The event, which opens at 10am, has trade stands featuring a wide range of radio and computer items, a car boot sale, an RSGB book and information stand and a bring and buy stall. RSGB Morse Tests will be available on demand, but remember to bring two passport size photographs. Talk-in will be on 2 metres, channel S22.

The Humber Bridge Amateur Radio Rally is being held at the Exhibition Centre, Freightliner Road, off Clive Sullivan Way, Hull. The site has easy access and is one mile from the bridge. Doors open at 11am, or 10.30 for disabled visitors. The event features a bring and buy stall. Refreshments will be available and talk-in will be on 2 metres, channel S22.

We know of only one rally for next Sunday the 31st of July:

The Rugby Amateur Transmitting Society sixth Annual Rugby Radio Rally is to be held at the BP Truckstop on the A5, some 2 miles North from junction 18 of the M1 motorway. The rally starts at 10am. The truckstop will be open for catering and other facilities throughout the day. Talk-in will be on 2 metres, channel 22, by GB6CBS. Further details from Peter on 0455 552449.

Now for the HF contest news:

The Russian DX Contest is scheduled to take place from 2100 UTC on Friday the 29th until 0900 on Saturday the 30th of July on 3.5 to 28MHz, excluding the WARC bands. See June RadCom page 20 for full details.

The Islands on the Air (IOTA) CW and SSB Contest runs next weekend from 1200GMT on Saturday the 30th for 24 hours on 3.5 to 28MHz. See March RadCom page 92 for full details.

Next some VHF contest news:

The RSGB 432MHz Low Power Contest take place today, Sunday the 24th, from 0800 to 1400UTC. It features four entry sections: single operator fixed, single operator portable, all others and Listener. See April RadCom page 80 for details.

The fourth RSGB 10GHz Summer Cumulative Contest takes place from 0900 to 2100 UTC, next Sunday the 31st of July. April's RadCom page 82 has further details.

The Doncaster 70 centimetre repeater GB3DV on 433.025MHz, channel RB1, was returned to service on Friday the 15th of July. For further details and/or reports regarding the repeater, contact G4LUE whose address is correct in the RSGB'93 Call Book.

Special event stations active this week include:

GB4GS which will be aired from the Goodwin Sands, WAB square TR45, tomorrow, Monday the 25th, by members of the Radio Club of Thanet. Operation will be on 80 and 40 metres, from approximately 0815 UTC, depending on the tide. Another operation is planned for Friday the 12th of August.

GB5AC, Air Cadets and GB5ATC, Air Training Corps, will be operational from town of Ayr during the RAF Display being held this weekend. They will use 40 metres SSB and 2 metre FM on channel S21, until 6pm, today Sunday the 24th.

The Air Training Corps will also be active as GB4ATC, G3ATC and G8RT at the Royal Tournament, held at London's Earls Court throughout this week.

GB4SFC will be aired by the Peterlee Amateur Radio Club for the Cleveland Scouts "Friendship 94 Camp" at Ripley Castle, North Yorkshire. The event takes place from Friday the 29th of July to Saturday the 6th of August, during which some 1500 Scouts, many from around the world, are expected to be attending. Operation will be on all HF bands, CW and SSB and packet on 2 metres. Visitors will be most welcome. For further information contact Bill, G4RXR on 091 586 7725.

And now the solar factual data:

The period from the 11th to the 17th of July has seen the passage of a coronal hole but, in the main, solar activity has been moderate. There was a B4.4/SF flare on the 13th and the X-Ray flux has risen to

reasonably high levels. The overall geomagnetic activity continues to decline. Sunspot indices have been high reaching 101 on the 12th, the highest count since last March. The period meaned at 80. A B4.4/SF solar flare on the 13th pushed up the solar flux which averaged 82 units. The 90 day flux average on the 17th was 80 units. The geomagnetic levels have been affected by the passage of a coronal hole which raised levels up to a sub-storm level of 26 units from the 15th to the 17th. Up to the 15th it was very quiet with levels down to only 2 units. The period averaged Ap 13.7 units. The state has been 'nil nothing to report' throughout the period.

The daily aa Indices, as supplied by the British Geological Survey for the 5th to the 11th of July, have been mainly quiet with periods down to only 2 nanoTeslas. The only unsettled day was the 7th, with periods up to 59 nanoTeslas. However, the average of the daily indices for the period was 13.6 nanoTeslas, about K2. The X-Ray flux has risen to quite high levels reaching B1.1 on the 15th and 16th with the period averaging a level of A7.8 units. The monthly average geomagnetic Ap for June was 15 units. The smoothed level for December 1993 was 17.6 units.

I'll repeat the figures. Spots - 80; Flux - 82; Ap index - 13.7; X-ray flux - A7.8.

We regret that a technical failure on our telex link has resulted in the absence of the ionospheric data this week.

And lastly the solar forecast:

This week, the more active side of the sun will be looking our way. Solar flux levels are expected to be about 85, with geomagnetic levels possibly up to sub storm with an Ap of about 25 units. Ionospheric MUFs are expected during daylight to be about 21MHz in the south, but northern stations may be affected by the geomagnetic activity. Darkness hour levels are expected to be about 14MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Victor Alpha and G7 Sierra Lima series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Delta series.

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast in the 80m, 40m, 6m and 2m bands.

QRO Telecom Provider, NY and former Soviet Union searching for
in-the-blood radio man, primarily for specification of
customized radio systems. Position would be NY with frequent
travel to former SU. (Reciprocal license, Icom-781, included!)

Requirements:

* deep background and practical on VHF/UHF, repeaters, antennas
* hands-on knowledge of equipment, alternatives and vendors

* HF antennas a plus
* microwave a plus
* cellular experience a plus
* PC skills including diagramming and presenting to staff and
customers
* good health, passport, tolerance of QRM

Company operates numerous satellite gateways and remote sites;
C/Ku experience a plus but not necessary.

Energy, initiative and ability to assimilate, organize and
communicate to multi-national staff and clients essential.
Radio Blood --- DC to light --- is essential.

Please pass the word. It's a good gig.

I thought the signal was QLF, as in "you seem to be keying with your
left foot".
If you learn code by computer program, cassette tape, or
Morse machine, there's little need to try sending CW. There was a
keyer in the January 94 QST (I think), that would try to read your
keying, and report on an LCD screen what it thought you sent, and at
what speed. Seems like a good hack.
Still working on getting to 13WPM,
73, doug

> QLF "I am sending with my left foot."

You're right Bob, thanks for the reply. But... I like the idea of QFS "Your fist sucks." QFS? "Does my fist suck?" At least I am having fun with it in this newsgroup. I've participated in QLF contests (being a lefty anyway I don't do a bad job with my left foot)...Hey maybe we ought to have a QLF contest on the air....what an idea!

Anyway, I imagine there is a ship-to-shore signal for QFS, or was one. I have a book (it's in storage right now) that I picked up at one of those library sales for fifty cents. I believe it's dated late forties or somewhere there abouts. It's a Radio-Communications Q&A manual and lists every "Q" code there ever was -- I believe. Not being able to look at it I can't verify if there are any QF- signals. But I am in favor of a contemporary set of "Q" signals. So long as they're not tasteless....er...too tastless that is.

If signal intelligibility is bad we can start using QRK along with QLF or "QFS". QRK has a scale of 1 - 5 with "1" being unintelligible.

I'm fairly open minded and enjoy amateur radio. I live it. With all this electronic doom and gloom stuff it's a breath of fresh air to something like this occupying some bandwidth. This I do not mind at all.

Since their input (or output?) is only 100 mW they are covered by
Part 15 which allows for A2 emission (modulated CW).

>More importantly, how do I decode the
>alphanumeric codes to figure out what band a particular Motorola rig I
>might run across at a hamfest covers?

Moto uses a simple code for most of the radios you're going to see at
the swapmeet. Here's a typical one to decode:

T74RTN-3100A

T - trunk mount (i.e., separate control head)
7 - 150-200 watts input power (typically 100w out)
4 - band 4 = 406-512 MHz (or some part of that range)
R - receiver model R
T - transmitter model T
N - power supply is the vehicle or battery

3 - PL (CTCSS encode/squelch)
1 - single freq (not always, could be other options)
00 - no special options

Most important to hams, I would guess, are the power and band
designators. These are from memory; I don't recall all of them.

Power
0 - no tx (receiver only)
2 - 2-5 watts out
3 - 20-30 watts out
5 - 50 watts out
7 - 100 watts out

Band
1 - 30-50 MHz (usually in 3 separate ranges, only H or HH range will
easily make it into the 6m ham band.)
2 - 75 MHz
3 - 136-174 (usually in two ranges, 136-150, 148-174)
4 - 406-512 (three ranges, 406-420, 450-470, 470-512)

For a full list, consult older Motorola books. Newer models have more
letters and numbers and are similar to this scheme, but more options are
available so the system got more complex.

P.S. I recommend avoiding MICOR mobiles as repeaters these days. They
are quite wasteful of power, and you can't get many replacement parts
anymore. Use a MITREK.
- Brian

My father and took our novice tests at the same time. We were among the
first to get licenses under the current callsign allocation system (1978, I
think). The weird thing was, mine came a week before his (KA7AIJ), and his
was KA7AHN. I still don't get that.

I remember when we told our Elmer we got our tickets, he told us we must've
made a mistake, as there was no such thing as a KA7 call. He thought that
was a DX prefix!

If CW (or MCW) is illegal on the CB bands, why do walkie-talkies come printed with The Code on the front, right under the code key button?

I thought they all had to be explicitly licensed (type accepted) by the FCC.

Greg.

>Anyway, I imagine there is a ship-to-shore signal for QFS, or was one.

Yes, there is one. It is a slowly sent comma: ___ ___ . . ___ ___

This was (informally) mentioned to us in Coast Guard Radioman School.
And yes, it was used a great deal on 500 kc (international CW calling
and distress freq). From the hundreds of ships I would hear month after
month it became easy to pick out a particular ship's op just by
listening to his fist even before he'd send his ship's callsign.
The exchange on 500kc would go something like this:

NMO NMO NMO NMO (he's calling me repeatedly without giving his call)
WNSL DE NMO GE OM UP 440/425 K (I knew his call just from his fist)
R UP
EE
EE
then he'd pass his traffic on 425 kc and I'd QSL on 440 kc. Note the
use of the dit dit - and you folks thought *you* invented it!

Earl,

I think most of the lids are too lazy and too sloppy to prepare for
and/or take a CW test for license renewal...these are the slobs who run
people off frequencies, cuss on the air, and generally sound like a
bunch of CB'ers on steroids. The really GOOD part about a CW retest is
that it would get these lids off the air!

CW forever!

The difference is that while cw is fine transmitted by devices that fall under Part 15's 100mW rule, the typical CB rig is a product of Part 95 - in other words, cw is specifically forbidden under Part 95, but allowed for Part 15 devices which *just happen* to be colocated frequency-wise.

The 3-Hr Ap Indices for 19 JUL 94 are: 15 19 19 13 8 6 10 11
Greater than 2 MeV Electron Fluence for 20 JUL is: 1.0E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7757 (N13E22)
produced the largest flare of the day, a B6/SF at 20/1328Z.
This region is showing signs of decay. Other regions were
quiet.

Solar activity forecast: solar activity is expected to be
very low to low. Small flares are possible in Region 7757.

The geomagnetic field was quiet to unsettled. The greater
than 2 MeV electron flux at geosynchronous altitude was high.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Event probabilities 21 jul-23 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 21 jul-23 jul

A. Middle Latitudes
Active 15/15/30
Minor Storm 05/05/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 15/15/30
Minor Storm 05/05/15
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
Good propagation was the order of the day. Similar good
propagation is expected through 22 July inclusive. Minor
high-latitude signal degradation may begin to be observed on
23 July in response to a recurrent disturbance.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>-Fred (N1RVG)

Somebody may have mentioned this before - as long as you can buy a decent CB rig for 40 bucks at the local discount/catalog store, there's not much incentive to shell out $300+ for ham gear, only to incite the wrath of every repeater op in town. If ham gear ever gets as cheap to manufacture as VCR's, we're in big trouble.

ARLD044 DX news

The items in this week's bulletin are courtesy of the DXCC Desk, the OPDX Bulletin, Chuck, KG9N, Joe, NJ1Q, Burton, VP9BP, and the Contest Corral column in QST. Thanks.

PRINCIPALITY OF SEBORGA. I1RBJ called the DXCC Desk this morning to say that he had returned from the ITU, and that under agreement with the ITU and the Italian government, he would now be using the callsign IS1A/0S1A. This station will be on this weekend. QSL via I1RBJ. Also, 3A2LF/0S0C will operate CW only on 25 July.

Amateurs are reminded that there is currently no DXCC status for this one.

The principality of Seborga is located 20 km north of Monaco and is 517 meters above sea level. The principality was established on 20 August, 959 AD. It is about 5 square km in area, and currently has 300 inhabitants.

SVALBARD. Tom, LA4LN, will sign JW4LN, and Magne, LB3RC, will sign LB3RC/JW from August 1 to 20. This is a scientific expedition and NOT a radio only DXpedition. QSL info for JW4LN is via LA4LN, Tom Victor Segalstad, PO Box 15 Kjels, N-0411 Oslo, Norway. QSL LB3RC/JW via LB3RC, Magne Nicolaysen, Stgaards gate 23 B, N-0474 Oslo, Norway.

CROATIA. Jacky, F2CW, has been working for the Red Cross in Croatia for the past six months. He has been on as 9A/F2CW, but expects to receive the call sign 9A5CW soon. Activity has been mainly CW with sporadic SSB. RTTY, PacTOR and AmTOR operations are in the works. QSL 9A/F2CW, 9A5CW and T9/F2CW via KC7V.

BAHAMAS. Chuck, KG9N, will be signing his call /C6A from the island of Abaco. Plans include being active in the North American QSO

Party. He will operate primarily on CW 25 kHz up from the band edges, but listen for his SSB on 14195 kHz at about 0300z daily.

LIECHTENSTEIN. Members of the PI4COM Contest Group will sign HB0/PA3ERC July 17 to 24. Ops PA3ERC, PA3BBP, PA3EWP and PA3GBQ plan to be on 160 through 10 meters with CW, SSB and RTTY. QSL via PA3ERC.

SOUTH KOREA. Del, HL9DC, an American from Ohio, is active from Wonju, South Korea. His length of stay is unknown. He was heard recently on 14025 kHz around 1200z. Also check the bottom of 40 meters between 1100 and 1200z. QSL via N7RO.

ARUBA. Hiro, JR4PMX, Jun, JH4RHF, and Kumiko, JR4DUW, plan to be active for one week starting August 24. Jun will sign P40S and Kumiko will sign P40YL. Listen for them on all MF/HF bands with their CW, SSB and RTTY. QSL via their home calls.

EGYPT. Ayman, SU1AY, was on the 14226 DX net around 0000z. QSL via OE6EEG.

GUAM. Burton, KH2/VP9BP, will be active for the next two years. QSL direct to Burton S. Paynter, 321 Johnson Road, Naval Hospital, Agana Heights, Guam 96919, or via the VP9 QSL Bureau. DO NOT send cards to his Bermuda callbook address.

ZD8LII QSL INFO. AD8V is NOT nor has ever been QSL Manager for ZD8LII. QSL ZD8LII via G0LII.

THIS WEEKEND ON THE RADIO. The SEANET CW Contest, sponsored by the Singapore ARTS, is from 0000z July 23 to 2400z July 24 on 160 through 10 meters. Send signal report and serial number beginning with 001 on each band.

The Venezuelan Independence Day Contest on CW, sponsored by the Radio Club Venezolano, runs from 0000z July 23 to 2400z July 24 on 80 through 10 meters. Exchange signal report and QSO number.

For more information on these two operating events, check page 118 in June QST.

The first Russian DX Contest will coincide with the Goodwill Games in Saint Petersburg, Russia, July 30 and 31. Special event stations R1GWG, for Good Will Games, and R1MVI, for M-V Island, will be active during the contest.

>maybe the ham community could just recommend against straight keys

AAARRRRGGGGHHHH!!! NO, NO, NO! If anything, we should be ENCOURAGING good fists on straight keys. What happens when the battery dies in the keyer? Or the computer goes on space-patrol? CW is a MANUAL skill, IMO, that needs to be developed. The lack of "hand-ear" coordination is a major reason newer hams can't send good code.

>German radio. Is this compatible or do I need something else?

The concept is similar, but the data format is different. You
might be able to adapt some of the code, but it won't work as-is.

Both transmit one pulse per second, with the length of the
pulse signifying '0' or '1'. At the end of the minute you have a
string of bits that tell you the time and date at the end of the
minute. You can get the data format by writing to:

NIST/Radio Station WWV
2000 East County Road 58
Fort Collins, CO 80524-9499

Obviously the clock/receiver must convert the bitstream into
something a UART can understand. This may be raw data or it may
be converted into some more useful format; you'd have to ask
Heathkit.

In the case of WWV and WWVH (Hawaii), the pulses are sent on a
100-Hz subcarrier. The main carrier signal is in the shortwave
band, which means that propigation is subject to atmospheric
conditions. Broadcast power at WWV is 10Kw.

In the case of WWVB (60KHz) and DCF77 (77.5KHz), the carrier
is simply turned off and on once per second, there is no audio.
Since it is a 'longwave' signal, it propigates along the ground
and is not subject to atmospheric conditions. Broadcast power at
WWVB is 13Kw.

The data format for WWVB is different from both WWV and DCF77.
The cheapest receiver I've found for WWVB costs about $700, even
though it should be easier to receive and demodulate than WWV.

I've sent a letter to Heathkit, but I haven't received a reply
yet. I've heard that the clock is still being made-- how much
does it cost?

: In article <30kdlg$r36@news.u.washington.edu> cummings@u.washington.edu (Mike Cummings) writes:

: Why do CW operators send "BT" instead of "." ?

I have no idea. Short and snappy, maybe?

: What is the proper in between transmission protocal?
: ie:
: I send: blah ... blah ... blah ... HOW COPY? xx#xx de N9WHG

: and then the other station will pick it up with:
: N9WHG de xx#xx blah ... blah ... blah

: Should there be an "AR" after my "xx#xx de N9WHG" ?

--
Send "K" instead ("KN" if you don't want anyone breaking in). If you're conversationally skipping the callsigns, you can send "BK" (for "Break") which has a kind of "wake up, it's your turn" flavor to it.

--
AR is for calling people you're not in contact with, and for "end of message" type things. Why, I don't know, since it's supposed to mean "over," which is supposed to mean "my transmission is finished, and you're supposed to reply," which is exactly what you want to say there. But "K(N)" is preferred. (P.S. "HW?" will often do for "HOW COPY?" *if* the other op is experienced enough.)

--
Using AR in the situation above is a Very Small Deal, not a big one.

Now this is truly amazing.... Several folks saying that their licenses are arriving in less than 9 weeks....

One possibility I can think of: At a testing session I was at in March, I remember the VE's mentioning that they were supposed to be using the NEW form 610's. However, they did not have enough to go around. The previous day, they had called the ARRL/VEC, and they were told that if they didn't have enough of the new 610's, just use the old 610's and those old forms would be put at the "top of the stack", as to get them through the FCC computer before the big switchover.

Could these folks that are seeing their licenses in less than 9 weeks be a product of VE teams that had to use old form 610's, thus they were put at the top of the pack?

I'm not bitching about it... I'm just suggesting a reason that their licenses are coming out faster than most others...

NOTE: The Effective Sunspot Number for 20 JUL 94 was 19.1.
The Full Kp Indices for 20 JUL 94 are: 2+ 1+ 3- 2o 2o 2- 1+ 2o
The 3-Hr Ap Indices for 20 JUL 94 are: 9 5 13 8 9 6 5 7
Greater than 2 MeV Electron Fluence for 21 JUL is: 3.6E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. The largest flare reported
since yesterday was a B1/SF at 21/0453Z in Region 7757
(N12E08). This region has changed little. Other regions were
quiet.

Solar activity forecast: solar activity is expected to be
very low. Additional small flares in Region 7757 are possible.

The geomagnetic field was unsettled to active at most
stations from 21/0300-1500Z and quiet otherwise.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled with occasional active
periods.

Event probabilities 22 jul-24 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 22 jul-24 jul

A. Middle Latitudes
Active 30/30/30
Minor Storm 15/15/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 30/30/30
Minor Storm 15/15/15
Major-Severe Storm 05/05/05

HF propagation conditions were near-normal over all
regions. Near-normal propagation is expected over the next 24
hours. Mild minor signal degradation may be observed over
transauroral circuits on 23 and 24 July in response to a minor
recurrent disturbance which is expected to influence polar and
high latitude geomagnetic and auroral activity slightly.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
20 Jul: 0022 0038 0048 B3.1 SF 7758 S13E51 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>AR is for calling people you're not in contact with, and for "end of
>message" type things. Why, I don't know, since it's supposed to mean
>"over," which is supposed to mean "my transmission is finished, and
>you're supposed to reply," which is exactly what you want to say
>there. But "K(N)" is preferred. (P.S. "HW?" will often do for "HOW
>COPY?" *if* the other op is experienced enough.)

Keeping in mind *all* CW prosigns originated on the commercial/maritime
freqs, here's an example of how AR would be used (on the maritime freqs)

Suppose a ship calls me and requests a WX forecast. AR would be used
to seperate the WX transcript from whatever comments I might have about it:

... STATIONARY LOW PRESSURE CENTER 12.3N 148.5W BT AR WILL HV NEW WX
IN ABT 1 HOUR OM K

So AR can be used to seperate official stuff from unofficial stuff.

I can't see AR being used in ragchewing.

> Tesla was responsible for...

Yeah, genius though he may have been, he was also as crazy as a shit house rat. One of the better books I have on him is a collection of his writings. Once you've read what he had to say in his own words, you can see why most people thougt him to be a crackpot.

Remember, he also came up with the idea of free energy to the masses with his large resonant transformer project. Just imagine that if he had managed to finish it, there would not be radio communications as we know it. Period!

As far as the rift between Tesla and Edison, that was partly due to Edison's "Not-Invented-Here" attitude and partly due to Tesla's unusualy firm belief of his own infalibility. (Hummm, sort of like the discussions on r.r.a.p)

Tesla, genius or madman? Both!

73 es GM from Jeff

For what it's worth, even as I type (well, sorta...it's only 0730 local) the annual International Tesla Conference is going on right here in Colorado Springs. Wayne even mentioned it in his August editorial.

They also had a short bit about it on the local news last night...judging from the appearance of some of the participants (cf. my postings in .policy a few months back about the appearance of hams at Dayton), it looks like some of them are trying to follow in Nikola's footsteps :-).

73, Jeff

<stuff removed>

: Not so oh wise one. Many folks coming into amateur radio today are not trying
: to emulate anyone. They have minds of their own and the whole world is a
: Burger King. They want it THEIR way. They don't need Elmers anymore...Elmers
: are all old farts. What do they know? They're all pro-code, keep it that
: way forever conservatives.

I'm glad many people have minds of their own, and are exploring a new (to them) interest. This is so much better than the activities of the mindless hordes. People who want everything THEIR way, in any branch of life, usually have a disappointment coming as there will be no solution that satisfies everyone simultaneously. I like to get things my way when I can, but have learned that compromise and agreement is more common. Let's all be reasonable humans, and make some allowance for the existance of others with different interests, then we can fairly expect them to make allowance for us.

I'm on Paul's elmer list, and spend a fair amount of time doing things requested by others. I suppose this qualifies me for some label or another. What do I know? - quite a lot about radio technology, but not everything. They don't need elmers anymore? - doesn't look that way to me, there is a steady stream of people wanting advice when things seem to be going wrong, or when they want a try doing something new to them and need a bit of confidence boosting.

My age is non-zero, therefore I am old. I find beans, radishes, Brussels sprouts and cabbage contribute strongly to the formation of methane during digestion. I do like radishes.

I like Morse code, too. It's probably my favourite mode, although most of my operating seems to be the local VHF net. I see no future reason to treat Morse specially. The removal of commercial/government CW stations from our shared bands is well underway. Ready made Morse-capable radio operators are no longer a key national resource in time of war. If the amateur Morse requirement gets dropped by the ITU at some future WARC, no one outside amateur radio will give a damn. I think Morse ought to be able to survive on a purely voluntary basis, just like all the other modes. Put my vote down for encouragement, not compulsion.

Bad sending comes from the inexperienced and the complacent. If we want to get results from strange and distant places, clear speech and Morse is very important. It also contributes to other people's opinions

of you and your station. I'm all in favour of people brushing up their sending and talking. I think learning a second language is another aid.

: Any so called "old farts" you are hearing, nowadays, are those who managed to
: squeak by on the code exam and pass the Extra written after 72 tries of taking
: every exam the VE teams (team hopping) have available. And this is all during
: one two week period! [Not my experience...I'm a VE and a young Old Fart]

The real reason for posting is to remind you that other countries exist, withdifferent examination styles. The written exam here is a pair of 90 minute papers. The Morse exam includes sending with a straight key and receiving hand sent Morse. 12 wpm is slower than 20wpm, but 100% copy is required - uncorrected errors on receive are counted letter by letter, I think the pass level is <5 letters in error in 3 minutes. Any uncorrected sending error results in failure, as does more than a few corrected letters. It seems that the difficulty level is similar to the 20wpm US test, with the "20 questions" style. Despite tested sending, you still find G stations with bad fists and runaway keyers.

Someone's already pointed out that QLF has been used (unofficially) for generations.

Funnily enough, I know someone who can only send with his left foot. He had to pass the Morse test that way. He uses phone only, so I don't know whether he has a good "fist" but his licence says he once had.

Cheers
David GM4ZNX

1235. RS Freq Counter?

My favorite question. Another good opportunity to post this.
(I believe I included all the corrections from the last round, but I
may have missed something.)

-drt

FAQ: US Automatic Reciprocal Operation in Canada

Q1: I have an FCC-issued amateur license. What do I have to do to
operate an amateur radio station in Canada?

A: A reciprocity treaty, TIAS 2508, provides for US-Canada reciprocal
operation of amateur radio stations. No application, registration, or
fee is required. You are automatically eligible to operate in Canada
if all three of these conditions apply:

1. You have a valid FCC-issued license (bring it or a photocopy);
2. You are a US Citizen;
3. You are a resident of the US (if you're not a US resident,
please direct your questions to a Canadian official. As I
understand it, if you become a Canadian resident, your US
license is good for a while, but they expect you to get
a Canadian one eventually).

(GR2.45.1.a, RIC-25 p. 9)

Q2: What privileges do Canadian operators have?

A: Legally, Canada has no separate phone band or other mode
restrictions. Instead, they adhere, on a voluntary basis, to a
bandplan, similar to the way we use 160 meters. (The IARU Region 2
bandplan can be found in Chapter 2 of the ARRL Operating Manual.)
Canadian amateur bands are the same as those in the US up through 1.2
GHz, except they have all of 220-225 MHz, and they only have 430-450
MHz. There are, however, bandwidth limits (-26 db):

160, 80, 40, 20, 17, 15, 12 meters: 6 kHz maximum bandwidth
30 meters: 1 kHz
10 meters: 20 kHz
6, 2 meters: 30 kHz

220: 100 kHz
440, 902: 12 MHz
1.2 GHz and up: none specified

(Schedule II, RIC-25 p. 15)

Q3: What privileges am I allowed while operating in Canada?

A: All foreign amateurs, including those from the US, are assigned
reciprocal privileges according to the Morse Code speed needed to
qualify for their license:

12+ wpm: All "Advanced + 12" privileges
(i.e., *all* Canadian privileges)

[US General, Advanced, Extra Class]

5-11 wpm: All privileges above 30 MHz,
PLUS CW and CW only on all bands below 30 MHz;
limited to Basic privileges [*]

[*] *Canadian* Basic + 5 wpm licensees are allowed
full access above 30 MHz, plus (full) access to
80 and 160, only. However, the above *is* what
the rules say about *foreign* amateurs operating
in Canada.

[US Novice Class, Technician + 5 WPM code]

0-4 wpm: All privileges above 30 MHz, with Advanced privileges

[US Technician without code]

(GR2.45.2,3,4, RIC-25 p. 9)

Q4: What's the difference between Basic and Advanced?

A: Without Advanced Qualification (or equivalent), you may not:

1. posess or install a transmitter or amplifier that isn't
commercially designed and manufatured;
2. posess or install any radio apparatus manufactured specifically
for use as a repeater where input and output are on the same band;
3. install a repeater where input and output are on the same band;
4. set up a club station

(GR2.47, RIC-25 p. 10)

Basic operators are also limited to lower power.

Q5: What are the power limits?

A: An Advanced operator or equivalent can use up to 1000 W dc input,
if power is measured as input to the final stage, *or* an output of
2250 W PEP SSB/750 W carrier power for other modes, if output power is
measured.

A Basic operator or equivalent is limited to 250 W input, *or*
560 W PEP SSB/ 190 W carrier power other modes, output.

It is illegal in Canada to posess or install a transmitter or
amplifier capable of exceeding your legal maximum power by 3 db.

(GR2.58, RIC- 25 p. 11-12)

Q6: So a General class licensee can transmit phone on 3760 or even
14140 kHz? And a Novice can use a 2 meter repeater?

A: Absolutely.

Q7: But I heard that the FCC won't allow you to exceed your US
operating privileges, even in another country.

A: I personally called the FCC and was able to confirm that this is
NOT the case. The FCC does not enforce Part 97 in foreign countries.
Despite what you may have read, it is perfectly legal to use whatever
privileges Canada allows you (see above) while you are operating a
station in Canada.

Q8: How do I identify in Canada?

A: If you're operating under your US license, then you use your call
"mobile" (if you are) or "portable" (if you're not), *followed by* the
appropriate indicator:

Nfld: VO1
Lab: VO2
PEI: VY2
NS: VE1
NB: VE9 (since Dec 1993; prior to this it was part of VE1)
Que: VE2
Ont: VE3 or VA3
Mtba: VE4
Sask: VE5
Alta: VE6
BC: VE7
NWT: VE8
Yukon:VY1

On CW, RTTY, and such you just use a slash, for example, I would use
"KG2S/VE2" in Quebec.

The treaty requires you give your location by City and
Province/Territory at least once per contact, but the Canadian rules
make no mention of this.

While the treaty requires English ID, the Canadian rules allow you to
use French, too. A chacun son gout. (However, you are not limited to
English or French during your contacts; you can use any language.)

Of course, if you operate a Canadian station or get a Canadian license
yourself, you use that callsign.

(GR2.57.1-3, RIC-25 p. 12)

Q9: What if I'm not from the US?

A: You will have to contact Communications Canada (numbers below) and apply for permission to operate. If your country has a reciprocal agreement with Canada, your privileges (once licensed) will be those outlined in Question 3.

If you, as a US licensee, want a Canadian license, you may be able to get it merely by passing a 26-question rules exam and giving a Canadian address. I know of at least one Advanced-class licensee who has done this with a Delegated Examiner. A Canadian station license carries an annual fee (currently about CDN$24), and license terms end 31 March of each year.

Q10: I'd like to get a copy of the Canadian rules. What do I do? Where do I address questions if I'm in a "gray area"?

A: I highly recommend getting a copy of the rules. They publish a number of circulars called RICs that you can order. They sent me these without charge. You can get them in French, too, of course ("CIR-25", etc.).

RIC-25: Rules and Regulations affecting the Amateur Service. 24 pp.

RIC-3: Banned Countries/Reciprocal List/Third Party Traffic List

RIC-66: Addresses and Telephone Numbers of Regional and District Offices

If you want information on exams in Canada, ask for:

RIC-24: Information on the Amateur Operator's Certificate Examinations

RIC-1: Information on the Delegated Examiner system

There are a lot of District offices, so I'm only going to list one in each Province. You can ask them to mail the rules to you, or you could get the address for the office closest to where you'll be visiting and go pick up what you want there.

Q11: Something you wrote in this FAQ was wrong! How do I let you know?

A: The material in this FAQ was based on the 1 March 1993 edition of RIC-25. If you know about any rule changes, or if a government official contradicts something in this FAQ, please email me at:

drt@world.std.com

I'll investigate and fix any errors. BE SURE TO INCLUDE AN AUTHORITATIVE SOURCE FOR YOUR INFORMATION.

(TNX VE9LN, VE3HKZ/WA6SGA for their help!)

Bon voyage!

1239. 6 WEEKS to get license

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-22 11:41:07 UTC
From: appler@mitre.org
Message-ID: <30ob8j$d2l@newsflash.mitre.org>
Source record: 262986

I was very worried by all the articles recently on 17 WEEK licences, but not anymore. I JUST RECEIVED my license after only 6 WEEKS!!!! So, I'm not sure what the rest of you are experiencing, but it was only 6 weeks for me.

- Matthew Appler (now KE4PDR)

Well, then we'll just agree to disagree, and get to more important
subjects.

Oooops. You're right.

License Received: July 21, 1994
^^

Must have been the thrill of receiving it that threw off my ability to read a calendar.

Yes, there is, but make sure you have your original license with you.
When you're in Canada, you have to id with your callsign, a slant, and
the Canadian call district you're in. So if you're in Ontario, for
example, you'd sign K9ZAT/VE3. You also have to identify the city and
provence you're in at least once during a QSO.

>teach CW by keying the mike and playing a code practice osc. into it?

That's called MCW or A2 emission, and those HTs aren't CB radios,
they're Part 15 devices that just happen to be operating on CB
frequencies.

|>

Another thought - perhaps the folks at the FCC got tired of hearing the phone ring and being badmouthed everywhere and pulled folks from other areas to man the terminals for a few days to get rid of the backlog. Or maybe they brought their kids in? Anyway, it appears that the backlog is breaking loose...

Why, is something funny?
I have one. I liked having the chance to hold it in my hand and play with
it before I put down some money. I also figured out how to add a hold
function (so easy I'm surprised RS didn't do it). Solid construction,
metal case, does what I need it to.
I need to get in and play with some other 'test points' and see what they do.
I paid $90 plus tax using a coupon.

My copy of the Lloyds of London -Handbook For Radio Operators- says
that QOA through QQZ are reserved for the maritime mobile service, and
it only lists codes in that range. Interestingly enough, QST is
undefined. I've not done a search to see if there's a signal that
means the same as QLF defined, but I suspect not.

Message-ID: <30or1t$fsp@usenet.INS.CWRU.Edu>
Source record: 262999

Another data point on time to get license.

Test taken: 11 May 1994
License Issued: 15 July 1994

Postmarked: 19 July 1994

Received in mail: 21 July 1994

Total elapsed time from test to mailbox: 10 weeks, 1 day.

Apparently they have used all the 1x3 calls for region 6, as my

no-code tech is issued KE6JTN.

I noticed in the lower right corner of the license "FCC FORM 660

MAY 1994". Perhaps the FCC was delaying issue of others until the

(new?) form came on-line.

Now I need to decide which 2M rig to buy. I'd like to get
one with AM aircraft receive, as I am also a private pilot. Any
recommendations? TIA,

1257. ts690 expanded rf?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-22 16:18:00 UTC
From: ZENCHC@dnrmai.dnr.wisc.GOV
Message-ID: <199407221515.IAA26931@ucsd.edu>
Source record: 262996

Looking back at old radio mod files I found one that described an
expanded rf mod for the Kenwood ts690. It said on the digital board to
remove d27. On inspection of the digital board in my ts690 the only
diode was d21. There were empty holes marked d20 through d25 with only
d21 installed. Removal of d21 did not expand the rf on the radio.
Does anyone have information on expanded rf for this radio different
than removal of d27?
73 and tnx

1258. Returning to Amateur Radio...

20 years ago I drifted away from the hobby. Now Im planning my return. I have a few requests for help:

1. Can anyone recommend a good Macintosh and/or DOS program for learning Morse?
[This FAQ didn't help much with this.]

2. Does the ARRL still transmit practice code sessions?
2a. Is the schedule posted somewhere?
2b. Does anybody understand #2/2a, or am I that old? :-)

3. The current crop of study guides are OK for a quick start but I'd like to generalize and round out my knowledge. I'd also like to get up to speed with the new technologies, digital, satellites.... So, what's a good basic/fundamental library of books to obtain?

>elected. Things ran pretty smoothly under the previous presidents.

Um, mine took 10+ weeks in 1991. Billy boy was just a Governor then.

<...>

>there are 2 things that have contributed to the backlog.

>1) more people getting new licenses/renewals than ever before..

A recent W5YI Report (mid-June or early July) showed that the number was
down (they said "dramatically") especially for Novice but for Tech, too.

Speaking of renewals and W5YI, I hope everyone has publicized Fred's
renewal scam. I'm going to try to get my club to go through the listings
for our area and see if we can't cull out the 70+ year old hams whose
licenses are about to expire and pay them a frienly visit ... with a
free 610.

<...>

>3) switchover to a new computer system...

Ahh ... The real reason. Seems this administration is actually investing
in new technology. Too bad the transition and the delays that go with it
were not well publicized by the FCC.

Hi Stan, do you still use a slide rule? What if the battery on your
calculator runs down? If everyone used machine generated Morse code,
the "Sucky Fist Syndrome" would disappear. I personally use a very
expensive straight key but when old age takes away my ability to send
good straight key code, I will simply switch to a machine and keep going
strong. If my battery dies and it's an emergency, I'm sure I could manage
5 wpm with a couple of wires.

If you don't test for CW reception, a lot of people won't be able to receive
CW intelligibly. If you don't test for CW transmission, a lot of people won't
be able to transmit CW intelligibly.

I haven't seen anyone mention that SuperMorse will send and receive CW
through the serial port on the PC. It's all documented in the SuperMorse
manual. People with SuperMorse could check their CW sending ability by
tying a straight key into their PC. They can also key their HF transmitter
from their PC keyboard using SuperMorse.

Why is the QST issue dated July/August? Anyone know?
Masthead says its a monthly, and it has been 12 issues per annum for a
long as I remember.
And yes, it is on the newstand here in Toronto, seen at Lichtmans, a
popular magazine/book 'chain' in the city.
I will buy it there, since the local ham store sticks a sticker on it and
charges a dollar more than the cover price.

Knowing R-S, it's made for them by some other manufacturer, the question is, who? or is it whom? Anyway, it might be made overseas, by a fairly reputable company. The price seems reasonable.

I took a peek inside a H-P counter, might have been 8514, or something like that, back in the early 80's. There was a transformer in the back, and a small circuit board up front, with a lot of empty space in between. It was a good counter, too.

We just had a whole slew of new hams appear on the local repeater.
They tested in late May, so the wait seems to be down to 8-9 weeks.

Another variable in this is the time that it takes for the VEs to
get the data to Gettysburg. Most groups are very quick about it
(particularly with the long waits lately), but some might take
considerably more time to check and mail the paperwork.

Something to ask about before getting tested.

SpaceNews
=========

MONDAY JULY 25, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* LUSAT NEWS *
==============
The LUSAT-OSCAR-19 satellite continues to operate without its file server running. The satellite continues to transmit the following beacon:

LUSAT-1>AMARG <UI>:
May 21.
OBC crashed on May 17 at +/- 2:45 utc, lat 45s, lon 43 w.
Only digipeater is available.

Although the file server is not available, the satellite does function as a digipeater, and other ground stations can be connected point to point, via LUSAT-1. The satellite has uplinks on 145.840, 145.860, 145.880, and 145.900 MHz using 1200 bps AX.25 Manchester encoded FSK. The BPSK downlink is on a frequency of 437.135 MHz.

Binary telemetry transmissions made by LUSAT-1 indicate that the spacecraft is in good health and transmitting with an output power of a little more than one watt.

Frank, KB2MVN in East Chatham, New York is making available his packet mailbox via LUSAT-1. Stations on the east coast of North America can connect to the mailbox when under a common footprint with Frank using a regular terminal program by issuing the command:

c kb2mvn v lusat-1

Monitor LUSAT's beacon to determine if the mailbox is active and accessible from your ground station location. Frank asks that you leave him a message if you are able to access the mailbox.

* STS-65 SAREX INFO *
=====================
Greg LaBorde, KD6MSM, at the Jet Propulsion Laboratory in Pasadena, California pointed out that some of the callsigns that appeared in the STS-65 SAREX packet frames in last week's issue of SpaceNews were actually those of DX Packet Clusters and their users. This is apparently the result of frequency sharing between the K6EXO DX Cluster in Los Angeles, California and the SAREX package on the Space Shuttle Columbia.

Joe, WA2GSY, in New Jersey provided the following packet frame received from the Space Shuttle Columbia on 21-Jul-94 at 10:26:16 UTC:

W5RRR-1>QST <UI>:
With the conclusion of this most successful mission, we wish everyone on earth the very best and thank you for your support,
KC5HBV, KC5FVF and the rest of the STS-65 Crew.

* KD2BD PACSAT MODEM *
======================
The August 1994 issue of QEX magazine will carry an article describing the "KD2BD Pacsat Modem", a high-performance 1200 bps BPSK modem designed for communication with "Pacsat" satellites. QEX is an experimenter's journal published by the American Radio Relay League.

The KD2BD Pacsat Modem is the result of several years of development and testing. It was designed around commonly available components for easy duplication and provides outstanding performance.

Among the modem's strengths is its ability to successfully decode BPSK signals well into the noise level using correlation decoding techniques. The modem can be used for communication with PACSAT, WEBERSAT, LUSAT, FO-20, and ITAMSAT as well as many future digital store-and-forward amateur communication satellites. It can also be used for weak signal terrestrial packet radio communications.

In operation, the modem demodulates binary phase shift keying signals received from the downlink of a digital amateur communications satellite via a 70-cm SSB receiver and antenna system. A digital AFC circuit in the modem automatically adjusts the receiver tuning in response to Doppler shift. The modem also generates a Manchester encoded serial data stream that when fed into the microphone connector of a 2-meter FM transmitter, produces 1200 bps Manchester encoded FSK suitable for establishing a full duplex digital communications link with Pacsat satellites.

Schematics, photographs, and a discussion of the modem design and its operation are included in the article. As evidence of its performance, a copy of this issue of SpaceNews has been uploaded to the AMSAT-OSCAR-16 microsat using the KD2BD Pacsat Modem, and will remain available for the next several days.

* AMSAT-OSCAR-21 NEWS *
=======================
At 16:17:43 EDT (20:17:43 UTC), Sunday afternoon, July 20, 1969, astronaut Neil A. Armstrong spoke the words:

"Houston, Tranquility Base here. The Eagle has landed."

At 20:56 EDT, later the same day, Armstrong stepped down from the ladder of the Lunar Module onto the Moon's surface and said:

"That's one small step for (a) man, one giant leap for mankind."

Edwin Aldrin followed him about 15 Minutes later, while Michael Collins orbited the Moon with the APOLLO-11 Command and Service Module at an altitude of 100 kilometers.

To commemorate the anniversary of this historic event, a special Multi-Media Broadcast has been uploaded into the RUDAK system on the AMSAT-OSCAR-21 satellite that includes the historic words and the APOLLO-11 logo in APT FAX format.

AMSAT-OSCAR-21's RUDAK downlink is a frequency of 145.987 MHz and can be received anywhere in the world using a narrowband FM receiver when the satellite is above the local horizon.

[Info via Peter, DB2OS, on behalf of AMSAT-DL and AMSAT-Russia]

* JUPITER OBSERVATIONS *
==========
Amateur astronomer Syl Pauley, K1ZFN, in Warwick, Rhode Island observed the remanants of two comet "hits" into the planet Jupiter using his 13.1-inch reflecting telescope (Dobsonian) and a 4 mm eyepiece. The holes created in the Jovian atmosphere were readily observable by him and interested neighbors. Observations were made at approximately 9:30 PM EDT on 19-Jul-94.

Syl would like to hear of any other reports from observations made by others using small telescopes. Syl can be reached via his packet radio address: K1ZFN @ KC1CE.

[Info via Syl, K1ZFN]

* SSTV ON OSCAR 13 *
==========
Slow scan television (SSTV) enthusiats are invited to join the SSTV sessions being carried on the AMSAT-OSCAR-13 satellite on a downlink frequency of 145.955 MHz.

The SSTV net meets at 45 minutes before the Mode S transponder is activated, and on Mode B following Mode S sessions on Saturdays and Sundays. Comments on these nets should be directed to wb6llo@amsat.org who is coordinating the SSTV nets on AO-13.

[Info via Dave Guimont]

* THANKS! *

That is the C/A code (coarse/acquisition). The P (precise) code is only
for those with friend in high places.

I'm supprised you get only 100ft of error. With SA on it should wander by
about 100 metres!

ARLP029 Propagation de KT7H

ZCZC AP43
QST de W1AW
Propagation Forecast Bulletin 29 ARLP029
From Tad Cook, KT7H
Seattle, WA July 22, 1994
To all radio amateurs

SB PROP ARL ARLP029
ARLP029 Propagation de KT7H

Solar activity is still stuck in the doldrums with solar flux in the high seventies and low eighties. A mild geomagnetic disturbance peaked on July 16 with the A index at 26 and the K index as high as five. Since then the K index has varied quite a bit, from one to four.

Solar flux is expected to stay near 80 for the next month. This weekend geomagnetic conditions could be unsettled, and the mild upset could return around August 10 and 11.

Sunspot Numbers from July 14 through 20 were 90, 59, 76, 73, 79, 44 and 39, with a mean of 65.7. 10.7 cm flux was 81.9, 83, 82.4, 80.3, 80.1, 77.6 and 77, with a mean of 80.3.

The path projection for this week is from Seattle to Singapore.

This path looks difficult at this time. 80 meters may have an opening around 1130z to 1230z, but it is not a strong one. Check 40 meters from 1130z to 1330z. 30 meters looks good from 1030z to 1500z. 20 meters has some possibilities around 0900z and again around 1730z to 1800z. The bands above 20 meters do not look good at this time.

My error. I am the one who keeps saying `newsgroup' rather than
email list. There is no QRP newsgroup, only the QRP email reflector.

For anyone who is interested, you can sub and unsub automatically
by sending an email to: majordomo@think.com and only write in the body:
(un)subscribe qrp *or*
(un)subscribe qrp-digest
depending upon whether you want to receive each article as an individual
email or all the day's articles in just one mailing.
You'll receive an message within a few minutes from think.com
welcoming you to the net with some info about it. If you want
to post an article use the address: qrp@think.com

>
>Greg.

I'd venture to say that there is a huge difference between CW and MCW...
I don't think there'd be any reason that one couldn't send morse code on
CB, as long as the emission mode was still AM or SSB. More than likely,
sending actual CW and sending morse code on AM are two different things.
For example, in the 2 meter band, you may only send CW between 144.0 -
144.1 MHz. I've seen people tune their Radio Shack HT's to 144.005MHz
and send their callsign in morse code with touch tones, not realizing
that it's not the same thing. FM takes up 15kHz (I believe) of band
space. The whole idea of only allowing CW in the lower portion of 2
meters was to reserve that portion of the band for small bandwidth
signals. Keying up your FM HT and sending code with the touch tones
defeats the whole purpose.

I know I've rambled on endlessly over something I could have said in one
sentence, but do you see what I'm saying? If CW is indeed not allowed on
CB, I'm sure there's no rule against sending morse code with a tone
generator on CB, as long as the mode of emission is still AM or SSB.

1280. HELP-getting sticky velcro tape to stick?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-22 20:12:37 UTC
From: markeh@netcom.com

Source record: 263018
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

Maybe someone here has some help for my problem. I have a mobile in my car, mounted in the trunk, with the control head stuck to the dash with sticky velcro tape. Well... not very sticky, since it keeps falling off.

I seem to have partially fixed the radio side of the problem, by using strips of tape long enough to extend around the end of the control head and wrap around the ends. But I havn't been able to solve the dash side of the problem - the tape unsticks, and falls off after a few days.

For several reasons, drilling holes is a poor solution, hence the velcro tape.

Any suggestions???

Help much appreciated,

73 Mark KM6FM

Radio Shack sells high temperature/high strength velcro. The adhesive is
like superglue and will not melt. Be sure to clean surfaces first. Don't
use too much as you would risk breaking the head trying to take it back
off - this stuff is strong. I've even mounted a scanner in my wife's car
with it...

Source record: 262887

In an earlier post, cmoore@sedona.intel.com writes:

>>>maybe the ham community could just recommend against straight keys
To which I responded, in part...

>>... What happens when the battery dies in the keyer?
>>Or the computer goes on space-patrol?
Permit me a clarification. The thread began with a plea for teaching new hams how to SEND intelligible code, in my interpretation. I inferred code that was sent MANUALLY, with a straight key [maybe a bug :{)]. These are the methods that are most prone to "bad" code. Hence my comment...

>>CW is a MANUAL skill...The lack of "hand-ear" coordination...
I have no doubt that almost anyone who has a basic grasp of language and minimal computer skills can use a properly set up program to send good (read intelligible) code. And if that's how you (editorial) choose to send your code, God bless. The thrill in code FOR ME is the challenge of sending "machine quality" (since that seems to be the standard) code with a straight key [or a bug]. (See GRATIFYING ACHIEVEMENT sidebar.)
The emphasis on code RECEPTION is all well and good if all you intend to do is LISTEN to code. If you are going for a two-way license, does it not make sense to also know how to SEND? No, I am not a proponent of restoring the sending test, but classes, of one or otherwise, should also give some attention to sending code manually. IMHO, learning to send by hand involves the op more fully in the learning experience, improving both send and receive ability.

(Side query: Why assume that all prospective hams have computers? Or want to use them for code? I do, and I don't. Hell, I even log by hand in contests and then "backload", and it's not for lack of computer skill; it's just the way I like to pursue my HOBBY.)

>... do you still use a slide rule?
As a matter of fact, I have a Pickett 1011-ES and a Pickett N-515-T.
I use them to demonstrate logarithms in basic electronics math review. :{)

>What if the battery on your calculator runs down?
Get out and push. My assumption is that if you are going to use a power saw (the calculator) you already have a basic idea of how to cut wood (calculate). But expecting people to learn real arithmetic in school is another thread...

>If everyone used machine generated Morse code, the "Sucky Fist Syndrome"
>would disappear.
Agreed...but it wouldn't be as much fun FOR ME. There are two options to SFS; stop talking to the guy, or send AGN until he gets the point. And

work on YOUR fist until it's a good example. I'm old fashioned, I guess;
I still think if you want something like a good fist, you can get it by
working at it, and that Elmer is supposed to be patient, wise, and kind.

>I personally use a very
>expensive straight key but when old age takes away my ability to send
>good straight key code, I will simply switch to a machine and keep going
>strong. If my battery dies and it's an emergency, I'm sure I could manage
>5 wpm with a couple of wires.
That's great, and I would probably do the same, even though I don't
particularly care for machine generating code (and that includes keyers -
don't own one, don't want one, wouldn't take one if you gave it to me.)
I use a Nye Viking key and a Vibroplex Standard because that's fun FOR ME.
I rather enjoy the me-against-the code aspect. That's what makes this such
a great hobby; there's room for everyone's interest.

>I haven't seen anyone mention that SuperMorse will send and receive CW
>through the serial port on the PC. It's all documented in the SuperMorse
>manual. People with SuperMorse could check their CW sending ability by
>tying a straight key into their PC.
Assuming, of course, that someone has impressed on them the need to learn
how to send. And in order to send clean, MANUAL code, they should use any
means to reach that goal, other ops as well as machine ears. We seem to be
having a heated agreement on this. :{)

I guess I'm a minimalist. I like barefoot radios and wire antennas. If
that's not YOUR thing, s'alright. But where is the harm in teaching the
most basic skills, like straight-key code? Like many other things you have
to know for your license nowadays, you blow off what doesn't interest you
once you've got your ticket in hand.

It's chicken soup; it can't hurt.

73

(GRATIFYING ACHIEVEMENT: Once I was working a FD CW station. Another op who
was working the phone station came over and said, "Hey, I heard you on the
other radio. Boy, does my homemade key..er....sound........good."
Yes, I was pounding brass.)

There was a scam several years ago (about 1989, if I remember correctly) involving a so-called Atlas rig. It was advertised in several of the amateur publications, and many people sent in their money. No one ever received any radio, and most were unable to get their money back. The perpertrator was convicted of mail and wire fraud. I can't remember his last name, but his first name was Michael, and he held a Technician class license. This was his second conviction for this type of scam (both were run under the name Atlas). I don't know if he's at it again, but it certainly sounds like the same MO. I'd be very leery of this operation.

73,
Jeff, KC1MK

>problem - the tape unsticks, and falls off after a few days.

I've had a similar experience. Assuming you are taking about a padded
dash and you are flush mounting the head and not trying to hang it under
the dash...

The vinyl to which you are sticking must be SMOOTH and EXTREMELY clean.
Use an aggresive vinyl cleaner that will remove all traces of dirt and
Armor All-like substances. You also have to have an adequate sticky
surface area for the load of the head (i.e., enough tape).
Make sure the temperature is in the recommended range for application;
too hot or too cold, and it won't stick right initially. Otherwise,
subsequent temperature changes will cause it to detach. Press VERY hard
and evenly to make sure every bit of tape surface meets the dash.

If the gods of adhesion are smiling on you, all should go well.
(BTW, Velcro is a made-up noun, derived from velour and crochet. Just
thought you'd like to know. Pardon the pedantry.)

Again, ARRL has tons of books on various ham flavored topics in QST. Also
check "73", "CQ", "Ham Radio Fun" and other mags at newsstands.

Welcome back!

: >I thought they all had to be explicitly licensed (type accepted) by the FCC.
: >
: >Greg.

: I'd venture to say that there is a huge difference between CW and MCW...
: I don't think there'd be any reason that one couldn't send morse code on
: CB, as long as the emission mode was still AM or SSB. More than likely,
: sending actual CW and sending morse code on AM are two different things.
: For example, in the 2 meter band, you may only send CW between 144.0 -
: 144.1 MHz. I've seen people tune their Radio Shack HT's to 144.005MHz
: and send their callsign in morse code with touch tones, not realizing
: that it's not the same thing. FM takes up 15kHz (I believe) of band
: space. The whole idea of only allowing CW in the lower portion of 2
: meters was to reserve that portion of the band for small bandwidth
: signals. Keying up your FM HT and sending code with the touch tones
: defeats the whole purpose.

: I know I've rambled on endlessly over something I could have said in one
: sentence, but do you see what I'm saying? If CW is indeed not allowed on
: CB, I'm sure there's no rule against sending morse code with a tone
: generator on CB, as long as the mode of emission is still AM or SSB.

I admit I haven't looked it up yet, but I'm positive that, except for
paging tones, only A3E and J3E *voice* are allowed on CB. What you're
talking about is either A2A or, on sideband, J2A, which comes out
looking much like good ol' A1A. It's not legally "still AM or SSB" -
within the meaning of Part 95, anyway.

The restiction on CB has less to do with bandwidth than with the basis
and purpose of CB. While I wouldn't oppose a petition for rulemaking
to allow MCW practice on CB, the FCC would probably deny it on the
ground that there are so many other sources for on- and off-air CW
practice already.

ARRL 13th ANNUAL DIGITAL COMMUNICATIONS CONFERENCE AUGUST 19-21

Do you operate a Digital mode (maybe Pactor, Packet, GTOR or AMTOR) now?
Do you find it difficult to keep up with the latest Digital technology?
Would you like to know more about Digital modes?
If you answered "yes" to any of these questions, then you should attend the
13th Annual ARRL Digital Communications Conference. Read on ...

The Conference will be held on August 19 - 21, 1994 at the Thunderbird
Convention Center, 2201 East 78th Street in Bloomington, Minnesota.
Accomodations are available at the adjacent Thunderbird Hotel, at the many
Hotels and Motels located within a short distance, and also at several area
RV\camper campgrounds.

Enjoy a weekend of fun learning about the latest developments in TCP/IP,
PACTOR, AMTOR, PACTOR-II, CLOVER, G-TOR, PACKET, DSP, and imaging. Participate
in the nine forums about DSP, new HF modes, TCP/IP, VHF/UHF networking, BBS
SYSOP issues and more. A glance at the program (attached) will show many
forums that will catch your interest!

```
**************************************************************************
* *** NEWS FLASH *** *
* *
* BEGINNER'S FORUM ADDED TO FRIDAY CONFERENCE AGENDA *
* If you are a newcomer to Digital Communications and feel somewhat *
* intimidated by all of the technical "jargon", then the Friday Evening *
* Beginner's Forum is just the thing for you. Veteran instructor John *
* Kaplan, WR0W, will present a "crash" course from 7-9:30 PM to help you *
* feel more comfortable in the Saturday technical forums and discussions. *
* There is no extra cost for this forum - its included in the main *
* registration fee. Space is limited so register now! *
**************************************************************************
```

One of the highlights of the conference will be the presentation of 18
technical papers on the many aspects of digital communications throughout the
day on Saturday. A list of papers is attached. You will receive a copy of
all papers presented.

Many demonstrations of the latest in hardware and software will be presented.
When you leave, you will have an in-depth understanding of the latest digital
communications advancements and techniques. The Saturday evening Technical
Showcase will feature TAPR Special Interest Group meetings for BBS SYSOPs
and on VHF/UHF network building and a nearly-mathless presentation of the
design and implementation of DSP software for a high-performance HF DSP
modem based on the $99 TI DSK DSP evaluation module by Johan Forrer, KC7WW.

The Hospitality Room will provide the place to meet old friends ... and make new ones. At the Saturday luncheon you will get to know "who's who" in digital communications. Meet the Engineering staff of manufacturers like Kantronics and Timewave Technologies. The optional Saturday evening diner will provide another opportunity to make new friends.

If you want a break from the Conference, the Mall of America, with hundreds of unique stores, is located within easy walking distance. Your family will enjoy Knott's Camp Snoopy theme park inside the Mall. The renowned Minnesota Zoo is only a short drive away.

The Conference registration fee is $45 per person, which includes admission to all Conference activities, a luncheon buffet and a copy of the technical papers. An optional Saturday evening buffet is $20 per person additional. Registration deadline is August 12th.

For more information about the Conference or special Airline and Motel discounts call or write:

what is the general configuration of these arrays? and i don't see what is
preventing a on-earth signal from arriving at the array in a manner
similar to what is expected for an off-earth signal. does this means that
the arrays are absolutely mindbogglingly gigantic, or most of the terrestrial
noise one receives has a source fairly close to the array? or some
other reason?

The gelcoat on the dash plastic is too slick to allow the adhesive
to adhere properly. Take some sandpaper and sand the dash down until
the gloss is gone and the glue will hold. (Note that's uglier than
drilling a hole, almost everything is.)

The 3-Hr Ap Indices for 21 JUL 94 are: 9 20 21 15 15 7 9 11
Greater than 2 MeV Electron Fluence value is not available.

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7758 (S15E15)
produced the largest flare of the day, a B2/SF at 22/1450Z.
Region 7757 (N12W05), the largest region on the disk, also
produced a small subflare (SF/no x-rays at 21/2338Z).

Solar activity forecast: solar activity is expected to be
very low. Small flares are possible in Regions 7757 and 7758.

The geomagnetic field was quiet to unsettled. The greater
than 2 MeV electron flux at geosynchronous altitude was high.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled. An occasional active period
is likely later in the forecast period due to recurrent
activity.

Event probabilities 23 jul-25 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 23 jul-25 jul

A. Middle Latitudes
Active 30/30/30
Minor Storm 15/15/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 30/30/30
Minor Storm 15/15/15
Major-Severe Storm 05/05/05

HF propagation conditions were near-normal over all
regions. Minor signal degradation was reported over some high
latitude transauroral paths, although most degradation was
quite weak and appeared to be isolated. Slightly stronger
degradation may begin to be observed over the next 24 to 48
hours in response to a well placed coronal hole. Middle and
low latitude paths should, for the most part, remain
unaffected.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,

EPL = Eruptive Prominence on the Limb.

> [This FAQ didn't help much with this.]

SuperMorse would have to be the most popular morse code teacher. Now, be forewarned... In my personal opinion, it bites the big one for teaching the letters. If you've got something else to learn the letters with, that would be better. However, SuperMorse can't be beat for increasing code speed once you've learned the letters. So, it all depends on how much you remember..

>

Code practice? ARRL? What on earth are you talking about?

<wide grin> Just kidding.... Yes, they still do that! I'm not positive if a schedule can be found there, but there are lots of ham radio files/ARRL informational files to be found if you FTP to oak.oakland.edu. Check inside the /pub/ directory and it's called hamradio, ham-radio, or something close. You'll see it. Start wandering around in there and you should find plenty...

Not sure about what books to get, but the question pools are also available at that FTP site. I don't know if it's just questions and answers, or if it actually explains theory, but it's there all the same... Money back guarantee if it isn't what you're looking for.. :)

Welcome back to the hobby!

Um, that is 100 meters peak. It is a very "interesting" waveform it shows with peak excursions to 100 meters or so which is maybe 50 to 100 feet off most of the times you look at it. (The Magnavox unit in our lab has a graphical history display for position. It is interesting to watch how much our building moves over the course of a day. {^_-})

QST is a Made-in-Newington code essentially meaning "Attention all
interested radio amateurs".

You 'll also hear QN* codes that the ARRL has developed for use in nets.

>Something to ask about before getting tested.

Well, at least in the ARRL-VEC, the VEs are required to have all the
paperwork sent in within 10 days. (I think it's 10 days. I could be
wrong. But if I am wrong, it's something very close). The ARRL then has
a similar short amount of time to send the paperwork into the FCC. So,
when the wait gets to be 17 weeks, it's because the FCC is slow, not
because of anyone else.

I'm really confused now about how these folks are getting their licenses
in less than 10 weeks. I've got friends who tested in March and earlier
who are still waiting. Is there anyone left out there that has been
waiting for close to 17 weeks?

I offered a reason earlier as to why some folks were getting their
licenses so soon, but I don't think it would apply to ALL these folks...
There's got to be another reason...

1310. TS 440 audio mods / filters

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-23 16:41:09 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9407230940.aa15202@paris.ics.uci.edu>
Source record: 262908
Cross-posted to: rec.radio.amateur.misc,rec.radio.swap

Anyone hop up their TS 440 with the AG6K suggestions for the audio section and the distortion in the product detector? I would love to talk about it.

Anyone have the IRCI filters in their 440 and install an extra switch for the 455 IF filter to keep the ceramic as a choice? OR, have any used some switching to keep the ceramic in line for transmit only?

Just curious. Trying to make my 440 a more liveable rig. It competes against my Ten Tec Corsair, much quieter receiver, but no general coverage and stuff. Would love to bring it up to better standards and then look at the choice I am making :-)

Greetings Joe, I finally received my license monday, July 18. It was approximately a 13 week wait. I am now KC7DRI. I have been having a lot of fun on 2 meters already. I am using a HT coverted to mobile when I am working(pizza delivery, so I'm in the car alot). It is a HTX-202 HT running from the car's battery and a mag-mount antenna on top of the car. I also carry a couple of battery packs and the rubber duck that came with it. Hope to talk to you again later.

John KC7DRI

Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets and spelling alphabets. This collection
currently includes alphabets for the following languages:

English, French, German, Dutch, Flemish, Italian,
Rumantsch, Slovak, Polish, Hungarian, Swedish,
Finnish, Russian and Chinese.

This posting supersedes the one of 25th April.

My thanks to the many contributors, not all of whom are
acknowledged below.

I can make no guarantee of accuracy of this information;
indeed please send me any corrections or additions.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest.

Comments in square brackets are my own.

Brian Kelk bck1@cl.cam.ac.uk
23 July 1994

***** ENGLISH *****

The NATO phonetic alphabet (as per the Cambridge Encyclopedia
of Language under Seaspeak):

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet, modulo Alfa and Juliett, is approved by
the International Civil Aviation Organization and the FAA.
The International Telecommunication Union Phonetics list
has: Alfa, Juliette, Oscar/Oskar, Victor/Viktor.
Dates from about 1956.
UK police use Indigo instead of India (?)]

Telecom B:

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found in Swedish, Dutch, Hungarian telephone directories.
A Swiss directory has: Andrew Charlie Lussy Queenie Sugar]

British A:

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich]

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway Ontario
or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United
Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala etc]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Allied Services 1945:

Able Baker Charlie Dog Edward Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tape Uncle Victor
William X-ray Yoke Zebra

From a book entitled "The Complete Morse Instructor..." (1944):

able baker charlie dog easy fox george how item jig king
love mike nan oboe peter queen roger sugar tare uncle victor
william x-ray yoke zebra

[The same alphabet is described as "Used by Armed services of
USA & GB" in the ARRL 1945 Handbook. Entries cited in variants
of this alphabet: affirm, cast, hypo, inter, negat, option,
over, prep]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

1316. Mobile Radio in Camry?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-23 20:21:28 UTC
From: k2ph@dxis.monroe.pa.us
Message-ID: <CtEtvt.44u@dxis.monroe.pa.us>
Source record: 262916

Any ideas how/where to mount a mobile 2-meter radio in a 1994 Toyota Camry? Doesn't seem like there are any good places to mount a 2-meter rig, with the center console as it is. Unless that area directly underneath the radio could be worked.

Thanks in advance.

73,
Bob K2PH

People waiting for their STS58 cards should take heart; I got mine today, along with a nice green pamphlet marked "STS-58 NASA-JSC Flight Integration Office" that notes the payloads. Good work!

>source of the public's fear of the unknown since 1956
From the FCC point of view, a Tech is a tech. The only thing you have
to show authorization to use hf is the CSCE showing that you passed the
code exam. When you pass the 13 wpm code, you will be issued a general
ticket. Until then, you have tech privilieges above 50 mhz and novice
privieges below 50 mhz.

: d21 installed. Removal of d21 did not expand the rf on the radio.
: Does anyone have information on expanded rf for this radio different
: than removal of d27?
: 73 and tnx

Sure, pull the diode you have and the set will run through its full range. The TS450 is the same. I also have the mod page from some book which mis-identifies this diode. Pulled it just to see and away it went. I put the diode back in (I have no reason to be outside the ham bands).

When I moved here to Singapore, I found out what the other holes are for. Our ham bands are not quite the same as those in Canada/US. The regulators in various countries take a dim view of ham gear that is capable of operating outside the ham bands.

After a quick trip to the Kenwood dealer, he installed another diode (sorry did not note which one of the empty spots he used) and *magic* - the radio now only transmits on the bands authorised for this part of the world.

Now, as a retired regulator, what is it you are going to do with that radio once you get it to transmit out of band? . . . ;->

>the USA costs about 1,50$, to Japan about 2$. IRCs can be "cashed in" for
>a stamp worth 60 Cents. We spent more than 200$ to deliver direct QSLs.
>Are we "greedy" ?

No, of course you are not. Note that the original question was
about mail from the US to Europe, not the other way around. My
point was that it costs a W manager 50c to mail a letter, so a
dollar represents a significant profit to a US manager.

What I and probably most managers do if someone sends a card with
no $$, IRCs or stamps is to return a card via the bureau. I am
amazed that you received one-third of the requests with no $$/IRCs,
I receive perhaps 2% without $$/IRCs.

Managers in countries where the mail is so expensive can reduce
their costs by bulk mailing letters to the US with 29c stamps on,
and having a friendly W do the mailings. Some European managers
do this routinely. For mailings to non-US, some managers mail all
their cards from a neighboring country with lower postal rates.

Source record: 262924

Something I noticed yesterday, when I was wondering why my fist sounds like hell compared to when I was 'into' CW (I *was* one of those whom they asked 'you mean that's NOT a keyer?!?).

My Argonaut 509 had a piercing side-tone which was loud regardless of receive volume, and quiet T/R gear.

My TR7's sidetone tends to be just below the R/X volume, with clattery T/R, if I adjust it so I at least hear the frequency between words.

Ergo, I found my brain shutting off much of the time while sending, and found that I WASN'T LISTENING TO WHAT I WAS SENDING! Oops. Can't do that with a straight key.

As soon as I started listening to the music I was playing again, it began once again to sound more like a reel than a Morris dance. So... ..obvious as it may sound... listen to what you're sending.

All that I can say is that MORE POWER HELPS. Get your local radio club behind you, and then go up from there. Start with the local government..then keep moving up. I know that in our county, we have a few elected officials who have call signs..this would be a great help if you could find some people like that in your part of the state.

MA>much you remember..

I don't know what this poster means by "bites the big one" but
Supermorse is the way to go. This program uses the modern
convention for learning the code by sending each character at
about 20 WPM and varying speed by changing the space between
characters. For example, if code is being sent at 5 WPM or
at 20 WPM, the characters themselves always sound exactly the
same, only the space between characters changes.

The idea behind this is to force the learner to concentrate on the
specific SOUND of the character and not try to count the dots
and dashes if the characters were sent at a true slow speed
corresponding to the overall word per minute rate.

MA>> 2. Does the ARRL still transmit practice code sessions?
MA>> 2a. Is the schedule posted somewhere?
MA>> 2b. Does anybody understand #2/2a, or am I that old? :-)

Well, not THAT old. Yes, the ARRL station W1AW transmits code
practise at several rates of speed to a schedule of times and
frequencies you will find in any QST. I believe they also follow the
convention I described above (there's a name for it, but I can't recall
it at the moment).

Enjoy your return to ham radio.

From: Shuttle Elements <elements-request@alsys.com>
To: null@alsys.com
Subject: ADMIN: Changes to Shuttle Elements Mailing List

The Shuttle Elements Mailing List has gone thru substantial growth since it
was started in January 1992. There are now over 650 direct-delivery
subscribers, not counting expansion addresses. Up until now I have been
maintaining the list manually, it's time to automate the list subscription
process.

Over the past couple weeks I've been testing a new automated list and
archive server. It is now ready. You can now subscribe, unsubscribe and
change your mailing address on the mailing list all by sending requests to
the automated listserver, at the "listserv@alsys.com" address.

The commands that you used to use to access files on the archive server have
been changed, except the "help" command. You can still retrieve recent
elements from the archive server however, at this time I plan to keep only
Shuttle elements in the archives. The other items in the archive were
rarely accessed, probably because it is easier for most people to access
them via ftp.

Starting today, all elements will *only* be sent to subscribers on the new
list in the listserver. You *must* subscribe with the listserver in order
to continue to receive Shuttle elements.

The command to subscribe to the elements mailing list is:

subscribe elements <Full Name>

You should put your full name in where it says "Full Name", ie:

subscribe elements Gary Morris

That's it. You will get a confirmation back in the email with your
password. Your password will be used in the future should you want to
change your address or unsubscribe to the mailing list.

If you are interested in accessing files in the archives, you can send a
message containing the word "help" to get the complete set of instructions.
The listserver only accepts one command per mail message. The most commonly

used command on the listserver is:

get elements last-shuttle-elset

I've never operated in Canada, but I have heard third-hand (on
Compuserve) of a couple of US hams who had problems because they
didn't have they didn't have their original license on them. The
wallet-size portion seems to be sufficient, though.

I don't know about this "scam", but the Atlas radio company is real
and has built several decent radios. The latest advertised was
the 310, and it was not a hoax, I worked a prototype..... The owner
of Atlas radio is down near San Diego, and you can talk to him on
the phone. (His name is Herb, he used to build Swan radios).

It is true that he advertised his radios a year ago and I have never
seen one delivered. This may be due to his overextending himself or
technical difficulties - neither is excusable. However, Herb is not
a bad fellow to my knowledge.

From: sww@csuohio.edu
Message-ID: <1994Jul24.044251.9059@news.csuohio.edu>
Source record: 262942

I have a brand spanking new PacComm HandiPacket. My major use is with MSYS and a HP100LX. The TNC needs to be in KISS. I have noticed that at times it reboots to battery backed defaults without cause.

Has anyone else using one seen this?

My guess is that the battery backed RAM is flakey. To reset it to where it works right I have to toggle the power switch for a few minutes. Otherwise it just locks up and then reboots.

Once in KISS (using the MKISS command), it seems OK. I shut the power down and come back later to a locked up TNC.

I purchased a used EPROM programmer at a ham radio swapmeet. The
program file that came with it on disk is corrupted.

The programmer unit has the name "SUNSHINE" on it. It has a card that
fits inside an IBM PC slot and a separate unit that has ZIF sockets
for the EPROMS that connects to the card with a ribbon cable.
The program that I need is called UPP512.EXE.

If you have a copy of this program, or know where I could get a copy,
please let me know. I would greatly appreciate it.

$700 is a ridiculous price. I got a DCF77 receiver for less than
DM 60 (about $ 40), and it had DOS/Windows software with it. I'm
using it now under Linux.

> Sounds like a Navtex signal or something similar.

> Kirk

I am not familiar with the specific station, NMN, but it is undoubtedly a US Navy (because it's call sign starts with N) CW ship-to-shore station. There are hundreds of such stations around the world, both government and commercial (e.g., WLO). They typically listen on the marine CW frequencies for ships to call them and then pass traffic. While idling, they just send messages like you heard but frequently you will hear them sending messages like CQ CQ CQ de xxx QSX 4 6 8 12 22, meaning the station is listening on

the standard calling frequency in each of the 4, 6, 8, 12, and 22 MHz ship-shore bands. Or you might hear a station sending lists of call letters of ships for whom they have traffic.

I don't have a table of frequencies here at home so can't give you exact info. If you really want to know, I could look up some examples the next time I get to the SS Lane Victory (a WWII Victory ship that is maintained as a working museum). I am in the radio group on the ship (I sailed as a Radio Officer during WWII) and we have all of the lists there (4 2-inch books!)

Of course, now, most ships no longer use CW but communicate via satellites of digital modes like SITOR.

Hope this helps.

1350. Help! Anyone talk to Seronga, Botswana?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-24 06:20:21 UTC
From: O'Brien <intlvirus9dc@delphi.com>
Message-ID: <xQ4TzqF.intlvirus9dc@delphi.com>
Source record: 262946

Hi everybody.

Sorry, I don't know if this is the right place to post a message such as this; I don't spend much time in this part of the 'net.

I could really use some assistance if anyone could help. The situation is this: A friend fo mine is a Peace Corps volunteer in Seronga, Botswana. There aren't any phones there and mail takes a month or more to arrive. I got a call from her yesterday (Friday, july 23) and was supposed tocall her back in Maun at a number she'd provided, in order to give her some information she desperately needed. Problems prevented me from calling at the time, and when I finally got through she was gone.

Is there anyone out there who is in touch with anyone at or near Seronga who'd be willing to relay a message? It would help A LOT, and I would be tremendously grateful for any assistance or advice provided.

Thank you very much,

David B. Livingstone

: >made a mistake, as there was no such thing as a KA7 call. He thought that
: >was a DX prefix!

: And he was right! KA was the prefix for the Philippine Islands
: before their independence.

He still is right ..... sort of. Certain KA2xx stations are US military
license amateur stations operating in Japan. Post-WW2, there were lots
of KA stations operating from Japan and KR6/KR8 stations operating from
Okinawa (while still occupied up til '72 I think). In the early 70's
it became possible for American hams, in particular, to obtain Japanese
"operator" licenses which could then be used with a Japanese "club station"
callsign .... that's what Armin Meyer/W3ACE did to get on the air
from Japan (when he was US Ambassador to Japan).

```
: Supermorse is the way to go. This program uses the modern
: convention for learning the code by sending each character at
: about 20 WPM and varying speed by changing the space between
: characters. For example, if code is being sent at 5 WPM or
: at 20 WPM, the characters themselves always sound exactly the
: same, only the space between characters changes.

This "modern convention" has been around quite awhile and is called
the "Farnsworth" method. It is the superior way to learn code IMHO.
Of the three or four different DOS/Mac programs I've seen or used,
ALL of them have the capability to use either the convention (old)
method, or the Farnsworth method.

FYI

If WWVB is really similar to DCF77 (I don't know WWVB) that price is
ridiculous. Receivers for DCF77 can be bought for less than $100.

>does it cost?

The Heathkit output is true RS-232-C serial, 1200 BPS, 8 data bits,
no parity, 1 stop bit. It sends the time as a series of ascii digit
characters.

The kit is no longer being offered. Heath stopped offering kits some
years back. The last that I heard, the clock was still being offered
as a completed unit from Zenith.

(The completed clock, around the time time that the kit was being
offered for $130, was $400. The kit was a nice week project and it works
quite well still.)

Interesting - why is this called "British A"? I can't recall ever
hearing it in use here.

(I've been off this group (reading this on r.r.a.m) for a while, so
apologies if this has already been covered)

I spoke to my buddy who has had a deposit down on the 310 for 1-1/2
years...he agrees that Herb is a great guy...and is to be trusted.

It is true that the prototype exists...but the one you worked will
not be the one delivered.

>
>It is true that he advertised his radios a year ago and I have never
>seen one delivered. This may be due to his overextending himself or
>technical difficulties - neither is excusable. However, Herb is not
>a bad fellow to my knowledge.
>
>Clark
>WA3JPG

It is true that Herb *continues* to advertise the phantom 310...
apparently the *new* digital domain (as opposed to the analog
design of the 210) was improperly engineered and ended up with
lots of birdies....and had to be redesigned...hence the unbelievable
delays.

Perhaps advertising dollars are short and that is why the ad now only
appears in CQ magazine. :^) On the other hand, maybe QST quietly
told them to stop advertising until it ships? Wh knows? But I
do know that CQ will take ad money from anyone...like that ad in there
for a box that will match any antenna to 50 ohms without any tuning
adjustment (i.e. an encapsulated 50 ohm resistor according to ARRL's
xray technician). ;^)

When a U.S. citizen enters the U.S., with exceptions, they will have to pay duty on any items manufactured outside the U.S. One exception is an item that was already "dutied". To prove that the duty was paid, you need to show that the item was already in the U.S. This can be done by a receipt showing the manufacturer, model and serial number. You can also go to the local U.S. customs office (before leaving) and register items.

I've never done it, but you may be able to use a notarized declaration that you owned the item as long as its from before your departure.

SB DX @ ALLBBS $OPDX.168
Ohio/Penn DX Bulletin No. 168

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 168
BID: $OPDX.168
July 25, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL DX Bulletin, DF4RD, DL7VEE & DXNL, DL5IAR, K4CEF & Southeastern Cluster Group, AD1C, NA2M, W4VQ, N8AC and VE3OUL for the following DX information.

6W, SENEGAL. Jean-Louis, 6W6JX, has been very busy lately on 15/20/30/40 meters. Check these bands between 0630 and 0930z, and again between 1630 1900z. QSL is via CBA.

9M8, EAST MALYSIA. Dave, 9M8BT, has been on 20 meters. He was heard on 14220 and 14226 kHz (free style) between 1315 and 1500z. QSL via N5FTR.

D2, ANGOLA. There was a report that Rich, AA4HU, was heard active from here as D2/AA4HU. His length of stay and QSL information is unknown at this time. He was heard on the 14226 DX Net around 2245z.

DF0, RUGEN ISLAND (IOTA EU-057). NODXA members and dear friends, Holger/DL7VTM, Birgit/DL7VTZ, Falk/DL7UTA and Fritz/DL7VRO and his daughter Silke will possibly be active from July 29-30 and also participate in the RSGB IOTA Contest. The island is located in the Mecklenburg-Vorpommern State East Group. They may be using the callsign DF0FA. If the group does not make it to Rugen Island, they may go to Denmark to be active as OZ/DL7UTA, OZ/DL7VTM or OZ/DL7VTZ. Part of this group was active earlier this year from Zambia as 9I2A, 9I2M and 9I2Z.

DL8AAM/P. ISLAND OF FEHMARN (IOTA EU-128). Tom, DL8AAM, will be active from this Schleswig-Holstein State East Group during the IOTA Contest this coming weekend. QSL via the bureau is "OK".

FH, MAYOTTE. Elio, FH5CB, can be found almost daily on or around 14256 kHz between 0400 and 0500z. QSL via FH8CB (ed. YEP that is correct!).

IS1A/0S1A, PRINCIPALITY OF SEBORGA. This one continues to get interesting and intriguing every week. According to the ARRL DX Bulletin: Paul, I1RBJ (operator of IS1A/0S1A), has called the DXCC Desk and reported to them

that he had returned from the ITU, and that under an agreement with the ITU and the Italian government, he would now be using the callsign IS1A/0S1A. (ed. So what does this mean for all those 0S1A contacts that were made?) Also, there will be a one day operation by 3A2LF as 3A2LF/0S0C on July 25 which will be CW only. The ARRL DX Bulletin also reports that the principality of Seborga is located 20 km north of Monaco and is 517 meters above sea level. The principality was established on 20 August, 959 AD. It is about 5 square km in area, and currently has 300 inhabitants. Amateurs are reminded that there is currently no DXCC status for this one.

OY, FAROE ISLANDS. Two stations were heard this past week on 20 meters. OY1R was heard on CW around 14040-50 kHz between 1245 and 1545z. QSL via W2KF. OY1HJ was heard on SSB, 14258 kHz around 1515z. QSL via OY6FRA.

R1MVI, MALYJ VYSOTSKIJ ISLAND. Just a reminder that this operation will take place between July 30-31. Not much is known about this operation other than that Russian and Finnish operators will be active during the first Russian CW & SSB DX Contest.

S2, BANGLADESH. Erik, S21ZG, continues to be active from here. He was heard on July 24th, on 14006 kHz at 0108z calling CQ, with very few takers.

TN0CW, CONGO (UPDATE). Rudi, DK7PE, has gone QRT from Brazzaville around July 19th and is back home in Germany. It took Rudi 2 years to negotiate with the Office National de Postes et Telecommunication (ONPT) to receive a permit to operate. During his operation, which began July 8th, Rudi logged almost 6000 QSOs on 9 bands using a vertical antenna for 40-10 meters, a quarter wave slope on 160 meters and a TS-50 plus an FL2100Z. Rudi has prepared all the documentation to be sent to the League. He is also considering another trip to Brazzaville sometime later this year.

V85, BRUNEI. V85KX was very active on 14025 kHz between 1230 and 1430z. QSL via G3JKX.

AN EARLY CONTEST STATION REPORT. Mike, N0BSH, reports he will be in PJ7-land in October for the the CQ WW SSB Contest. (ed. If there are any other early contest station reports, send them to the OPDXB!)

DXAC NEWS (From the DXAC and DX-Reflector on InterNet): The DXAC has received a new petition from W9ARV to add the Balleny Islands to the DXCC Countries List. The Balleny Islands are located in the Antarctic at Latitude 66 55S, Longitude 163 20E. The applicant claims they qualify under Point 2A, greater than 225 miles from a Point 1 country. In this case the Point 1 country is New Zealand.
A new petition has been received from the Chinese Radio Sports Association (Wang Xun, BZ1WX) to add Huang Yan Dao (Yellow Stone Island) aka Scarborough Reef, to the DXCC Countries List. The applicant claims it qualifies under Point 2, Separation by Water. No supporting information was attached. The orginal petition was

filed by Hans, DK9KX but was withdrawn a few weeks before the BS7H
operation took place.
Also, a petition has been received from Nao Akiyama, NX1L, to add
Austral Islands and the Marquesas Islands to the DXCC Countries List.
The applicant claims it qualifies under Point 2, Separation by Water
and that French Polynesia is a Point 1 country.
All three petitions as of press time have not been added to the
DXAC's agenda by the DXAC Chairman Robert Beatty (W4VQ).
Jim Dionne, K1MEM, has been appointed DXAC representative for the
New England Division, replacing Bill Shipp, KC1AG.

THE OHIO/PENN DX BULLETIN NOW HAS A MAILING LIST ON INTERNET!

NMN is a communications station in Portsmouth, Virginia.

If you enjoy listening to and searching for utility and military stations,
you may want to pick up a copy of "Ferrell's Confidential Frequency List."
Should be available in most ham stores.

1365. Buckmaster CD unreadable ??

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-24 20:53:32 UTC
From: jaevans@clark.net
Message-ID: <30ukcc$sqp@explorer.clark.net>
Source record: 262966

Greetings - I emailed this to buckmaster and got no quick response, so I
am querying the world.

Subject: Problem reading CD

Greetings,

I just purchased a Buckmaster HamCall CD but am unable to get it to
work on my system. I can list the directory and MAYBE type one or two of
the readme files, but the menu.exe program locks up the system and any
attempt to read files results in a hung machine.

I commented just about everything out of both the config.sys and
autoexec.bat files, except the cd rom drivers and still can't read the cd.
Has anyone seen or heard of similar problems with other machines or know
of a fix??

486/33 machine
adaptec aha-1540b ctrlr
chinon cds-435 rev M62 drive
Corel SCSI CD drivers
DOS 5.0
Windows 3.1 (problem occurs under DOS and windows)

A change to Adaptec EZ-SCSI drivers doesn't help at all either. I will
next try to read it under Linux and see if I can at least dump out
the readme and text files.

thanks in advance for any help.

>>don't know if this is the beginning of a fad, or if I've simply missed
>>this bit of info in previous qsos, but I am now responding in kind.
>>
What is the "Q" signal for socks? "QSS"? Use the resistor color code
to state color: and 2nd number is size:
QSS 6 10 = my socks are blue, size 10
QSS 7 9 = my socks are violet, size 9
QSS 9 11 = my socks are white, size 11
QSS 1 8 = my socks are brown, size 9
QSS 0 10 = my socks are black, size 10
QSS 4 7 = my socks are yellow, size 7
etc.

:-)

>Help much appreciated,

>73 Mark KM6FM

Use plain old rubbing alcohol to clean the surface of your dashboard before applying the Velcro. It might discolor the vinyl, but the color will come back as the chemicals in the vinyl leach back to the surface. The vinyl in the dash sort of sweats and any kind of vinyl protector like Armor-All leaves an oily coating. The alcohol removes the oil, just like it does the oil on your skin. If you really need a strong bond, you can put superglue on the velcro glue side. This is a pretty permanent mount, though, and will damage the dashboard. If you use the "industrial" velcro at Radio Shack, like Tom Bodoh suggests, be aware that you will need a something like a screw driver or putty knife to pry the two items apart. That stuff sticks together!!!!!! I have bent the case of rigs and bent mounting brakets trying to get that stuff apart.

: Maybe someone here has some help for my problem. I have a mobile in my car,
: mounted in the trunk, with the control head stuck to the dash with sticky
: velcro tape. Well... not very sticky, since it keeps falling off.

Mark -

Most dashboard "protector" chemicals coat the dash with a film that
prevents adhesives from adhering well. My suggestion:
1. clean the area where the velcro will be attached with a
water/ammonia/soap solution.
2. Carefully wipe/dry the area, assuring it is not contaminated by
surrounding residue.
3 get a fresh piece of velcro (not one that has been stuck on the
dash previously), & affix to dash. Wait a day before you put a load on it.

If the velcro still peels, try using "Stixall" (c) or RTV sealant as an
adhesive. These -may- cause some degradation to the surface of the dash,
though.

Good luck!

Hi,
And thanks for reading my post, I recently just bought a Mountain bike and have been doing alot of back woods riding. I have not been carrying my HT, because I wanted to figure out a way to mount it to the bike. I was wondering if any of you out there have done this and if so if you could shoot some idea's this way.

I was thinking of something on the handle bars , I am using the Yaesu FT-470. Is there some kinda bracket that can be attached ??? maybe with some velcro ???
I think it would be a good idea to carry something into the woods just for emergency sake. Thanks for any help.

Phase-3D Spaceframe Arrives In Florida

Following its completion at the Center for Aerospace Technology at Weber State University in Ogdon, Utah, the Phase-3D spaceframe arrived Monday, July 18th at the AMSAT Phase-3D Integration Facility now established at the Orlando International Airport. It now resides in the clean room which has just been completed at the facility.

Dick Jansson (WD4FAB), AMSAT Vice President for Engineering, said that the spaceframe arrived in good shape after being trucked across the country. He indicated that the next job is a thorough inspection of all the various pieces and then applying special coating to them.

Future ANS bulletins will provide updates on the progress of the Phase-3D integration as events warrant.

[The AMSAT News Serive (ANS) wishes to thank Dick Jansson and Stan Wood (WA4NFY) for this information.]

Former Apollo-11 Astronaut Talks To STS-65 Astronauts With SAREX

On Saturday July 16, the 25th anniversary of the liftoff of Apollo-11 on its historic journey to the moon, General Thomas Stafford (Ret), a former NASA astronaut who flew on-board several Gemini and Apollo missions, exchanged greetings with STS-65 mission commander Robert Cabana, KC5HBV, using the Shuttle Amateur Radio Experiment (SAREX) radio. General Stafford was in Oklahoma City attending the Airshow America. Using the SAREX telebridge, General Stafford was able to communicate with Commander Cabana first through a ground station in Hawaii and then through a ground station in San Diego. A special phone patch also allowed the crowd of 150,000 spectators at the airshow to hear this historic SAREX contact. After Commander Cabana extended his greeting from space, Stafford asked about the Shuttle and living in space. General Stafford was quick to point out that "the Space Shuttle can be considered luxurious living as compared to that small capsule I flew in during my flight on Apollo-10 25 years ago". General Stafford thanked Commander Cabana for the contact and signed clear.

One observation made by the SAREX team was the virtual silence of the audience during this live exchange between the former astronaut and the Space Shuttle Commander as compared to the deafening roar of the crowd and the planes during the air show. It seemed that the audiance was truly transfixed by our (amateur radio's) ability to talk to an astronaut while they are in space.

[The AMSAT News Service would like to thank the SAREX Working Group and Frank Bauer (KA3HDO) for this bulletin item. Others who deserve mention and assisted in this SAREX contact are listed below.]

Mode-S : MA 120 to MA 122 |<- S beacon only
Mode-S : MA 122 to MA 145 |<- S transponder; B trsp. is OFF
Mode-S : MA 145 to MA 150 |<- S beacon only
Mode-BS : MA 150 to MA 180 | Blon/Blat 180/0
Mode-B : MA 180 to MA 256 | Move to attitude 230/0, Sep 12
[G3RUH/DB2OS/VK5AGR]

DO-17: DO-17 still continues to transmit its voice message on a downlink frequency of 145.825 MHz.

RS-10: N2WWD would like to pass on some observations regarding RS-10. The signal in the past week seems stronger than normal. More interesting than this is that it appears that the translation constant between the Mode-A passbands seems to have shifted by about 1 KHz. This translation constant appears to have moved from 5 KHz to 6 KHz (when the effects of Doppler shift are removed). Thus, in the past where 145.910/29.386 MHz would be a corresponding uplink/downlink frequency pair, however, presently N2WWD needs to use 145.910/29.385 MHz to achieve the same results. This holds consistently for 3 different sets of Keplerian elements used. N2WWD would like to know if others have similar reports? [N2WWD]

AO-21: The speech synthesizer will be reproducing Neil Armstrongs famous words that he spoke as he stepped upon the Moon's surface 25 years ago this past week. Listen for the downlink on 145.987 MHz FM. [DB2OS]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ N0QCU. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

Generally speaking, if you are not a licensed radio amateur, it is highly unlikely that any of the Sysops of the Internet/Packet gateways will allow e-mail going from you (unlicensed) to a (licensed) ham; on the other hand, a licensed ham - formally registered with the gateway, will probably have no trouble sending mail out thru the gateway to an unlicensed person. The bottom line is that only communications originating my licensed hams is permitted to go out over the radio waves.

FOX HUNT.....FOX HUNT.....FOX HUNT.....FOX HUNT.....FOX HUNT.....FOX HUNT

All southeastern Michigan and northwestern Ohio are invited to participate in the Radio Active Communications Club's August Fox hunt being held in Monroe County, Michigan. The fox hunt is being put on by Rich (n8yqw), with supporting hider Russ (n8tud), and direction given by Judy (Rich's wife).

The fox hunt is on Sunday the 21 of August. The starting point is Heck Park in the City of Monroe, just west of I-75 on M-50 (North Dixie Highway), exit 15 from the expressway. The starting time will be 2 pm, so be there early and have your DFing gear ready. There will be 2 foxes hidden, both on 2m simplex frequency. The first with a voice id that will be heard from the park and a 2nd cw id fox will be able to be heard from the voice id fox's location.

Talk in will be on the 224.58 n8iqx repeater with a 2m simplex remote base input of 147.495.

Following the Fox hunt, all are welcomed to join us at a potluck dinner, please bring a dish to pass. The main dish is being provided by Rich and Judy. Please RSVP to Rich or Judy direct at (313) 289-2638, on the n8iqx repeater to Rich (n8yqw), or myself Gene (n8pdk) via packet at the addresses at the end of this message if you plan to attend to pot luck afterwards.

Remember to bring your camera as you may be visiting much of historic Monroe..... Hi Hi Good Luck with the hunt....!

Greetings!

I LOVE the GC-1000 (Heath Atomic Clock monitor)! I got mine about 10 years ago, and it's still working perfectly! What others have said about the RS232 output is correct. I just wanted to throw in my vote FOR it!

I also got mine as a kit, for around $100, I believe. (Though, ten years later, I'm not positive any more.) Back then, it was available as a completed unit for a price in the range of 400-500 dollars.

I'm running mine on an OS9/68030 system. I have written software; that plus Cron updates the system's time to the clock twice a day.

I cant see a reason why it isnt used elsewhere...i think the keyword
is that it makes it easier to use repeaters anywhere, i mean, you
dont have to know which ctcss freq to use...just enter the right
frequency, push tone button, and there you go...and even if you
didnt know the right frequency it makes only eight tries (on 2m)
to go through all repeater frequencies (145.600-145.775)...well 16
channels on 70cm, but i find it anyway a bit easier when compared
with trying different ctcss freqs on all rpt freqs :)

BTW: i heard that there are also carrier-operated repeaters, at
least in Australia. I think it might cause problems, because of
all QRM on the air, the repeater would be "on" every now and then
even if nobody was trying to use it...thats why _some_ selective
calling is essential!

I've always found that a piece of PVC piping, 1" or so in diameter, angled
down at each end, ie:

```
Wall
||
Outside /------\ Shack
||
```

This helps prevent moisture from getting inside the house, and provides you
with sufficient feedthru for several pieces of coax. If you get a piece
of foam rubber you can stick it in the pvc piping to provide a level
of insulation if you live in a cold-climate area.

The jolting a bike frame gets from off road riding won't be good for
the radio. I suggest you get a chest pouch for the radio and keep it
on your body instead. Try to protect it when you fall. :-)

[Publishers Note]
Hello fellow Newsline readers. When I took over the hardcopy publishing of Newsline from Bill Pasternak, WA6ITF, I continued the number from where he left off, which was #24 as I recall. Starting with this issue we are realigning the numbering scheme on the Hardcopy version of Newsline to that of the Audio version. That being #884 for this week of July 22nd. This should help to eliminate the confusion that has happened from time to time. Thanks for your patience. If I can be of any assistance you can contact me at:

The following is a QST

The FCC orders more retests as its probe of possible fraud in the All Volunteer ham radio testing program continues. President Bill Clinton's motorcade is jammed in Naples, Italy and SAREX STS-65 is on orbit and on the air. These stories and more on Newsline report number 884 coming your way right now!

(*****
MORE RETESTS IN CAL VE FRAUD CASE

Some fifty nine people previously tested by a group of suspect volunteer examiners have been ordered to be retested or face administrative sanctions. This is the latest word coming from the FCC in the wake of its ongoing probe into alleged fraud and corruption in ham radio testing in California.
Word of the retests was announced by FCC Personal Radio Branch Chief John B. Johnston, W3BE. Speaking at the annual meeting with the nations Volunteer Examination Coordinators on June 24th, Johnston said that twenty examines have had their examination

credits totally invalidated in addition to the fifty nine ordered to retest. W3BE told the VEC's that there was definite evidence that at twenty five California test session the commission knows about so far, applicants were given answers to the Morse Code test message prior to testing. As a result the retesting was ordered. As we go to air only three people who have been re-examined have received passing grades.
Johnston has also made public a few other pieces of evidence collected in the probe. According to John, one Volunteer Examiner allegedly administered examinations at two different locations on the same day, and traveling as much as seventy miles one-way between test sessions. W3BE says that the FCC has determined beyond any doubt that one of the sessions never actually took place. Even more incriminating, the FCC appears to have solid evidence that only seven people were actually examined at the second session even though the VE's proctoring the test claimed the number tested on site was twenty-two. This lends a lot of credibility to our report two weeks ago that much of the alleged fraud was accomplished by manipulating the paperwork going to the various VEC's.
About the only thing not yet made public are the names and call signs of the suspect VE's, but this too may soon change. At least one major ham radio publication is known to have a copy of the list of VE's that are under government scrutiny. We hear that entire list plus the names of some suspect applicants may be appearing in print worldwide within the next few weeks.

(*****
MORE TESTING FRAUD ANNOUNCED

California is not the only place where ham radio testing fraud is taking place. In a related matter, Johnston also told the VEC Conference that government investigators have cracked two other licensing cheating cases. In a Texas incident a non ham actually assumed the identity of a deceased radio amateur to certify test results for applicants who never even attended a test session. In that case the Contact VE -- that's the person who sets up test sessions in a given region -- the Contact VE has already surrendered his license to the FCC. Twenty four applicants at the test session have had their fraudulently obtained licenses canceled as well.
Also, an Technician Class ham in Kansas has had his license suspended for a year. This, after the FCC found that he had tried to bribe a Volunteer Examination Coordinator in order to obtain an upgrade. At airtime, the FCC has not yet released this hams call sign or name.

(*****
PRESIDENT CLINTON JAMMED IN ITALY

Radio communications for a Naples Italy motorcade for President Bill Clinton have been maliciously jammed. According to news reports, the incident occurred when President Clinton arrived for the Group of Seven summit in the port city of Naples on Thursday night July 7th.
The Italian news agency ANSA quoted police sources as saying that while Clinton's motorcade was traveling from the airport to his waterfront hotel, an unknown voice repeatedly broke into police radio communications with what it authorities called "vulgar expressions."
The sources said the jammer interrupted communications between Italian and U.S. security agents to express his views on the Americans and the police. No details of the insults was given but the news agency noted that Clinton did not hear them. Naples authorities also admit that they have little or no hope of finding out who the foul mouthed jammer is.

(*****
CHECK YOUR LICENSE DATE

The American Radio Relay League advises that amateurs receiving new or modified FCC licenses dated June 8th or later should carefully note their expiration date. This is because only new, first licenses or specific renewals now carry a full 10-year term. With new computer software recently installed, the FCC is now processing amateur permits to conform with to the way in which it processes all other Private Radio Service licenses. As a result, Amateur license upgrades, changes of address, call sign, or name changes are processed with the original expiration date intact. That is, they are not automatically extended for another 10 years as has been the case in years past.
The FCC currently recommends that amateurs submit license renewal applications 60 to 90 days before their expiration date. The Commission says that it intends eventually to mail license expiration notices to amateurs but that program is not yet in place. In the meantime, the ARRL is sending license expiration notices to its members, along with an FCC Form 610 and a return envelope to the FCC's licensing division in Gettysburg, Pennsylvania. The W5YI VEC is doing the same for the general ham public but does charge a nominal fee for filing paperwork back to the FCC.

(*****
INTERFERENCE FROM CORPS OF ENGINEERS

The FCC reports that its San Francisco Office recently received a call from the Veteran's Administration Hospital in nearby Martinez complaining of interference to hospital security communications. At the same time, they received a complaint that a similar pulse noise was interrupting communications at the U.S. Customs Service Office on Mt. Taltamalpais, CA. So FCC engineers using their mobile direction finding equipment went out and

tracked the source of interference. And guess what they found. The culprit was a geographic positioning transmitter used by the Corps of Engineers in a dredging operation that no government authorization to operate. It was ordered to cease its operation immediately. It did. Case closed.

(*****
US-RUSSIA SHUTTLE PACT

Word that Russian and American amateurs who flew aboard the space shuttle Discovery on last winters STS-60 mission benefited from temporary third party and reciprocal operating agreements finalized just before lift-off.
On February 3 the US Department of State and the Russian Ministry of Post and Telecommunications each approved the temporary arrangements, which allowed cosmonaut Sergei Krikalev, U5MIR, to contact, on February 6, the House of Science and Technology for Youth, in Moscow.
The contact was retransmitted in Russia on HF and VHF, according to the ARRL SAREX Working Group.
After the Russian Ministry of Post and Telecommunications and the US State Department approved the arrangements, it still was necessary to obtain a Special Temporary Authorization from the FCC. The ARRL contacted the FCC's Personal Radio Branch, and the STA was granted on February 4th.
Permanent reciprocal operating and third party agreements between the US and Russia have been in negotiations for several years.

(*****
HAITI

As reported in many D-X newsletters, two hams were recently in Haiti on assignment for various news agencies. One of them was Alan Kaul, W6RCL of NBC Network News. This is the same W6RCL who for many years anchored Newsline. Alan operated with an Icom high frequency transceiver, antenna tuner and all-band long wire antenna. The other ham in Haiti was Bill Howard, N4MU of CNN, who was also running 100 watts on SSB.

(*****
UK HAMS SAY NO TO NO CODE

British Amateurs are opposed to a code-free amateur license with High Frequency operating privileges. This according to a recent informal survey of United Kingdom hams.
By way of background, the current UK Class B license, with privileges only on 50 MHz and above, is code-free while the Class A license requires a 12 wpm Morse Code exam. In 1992 the British Radiocommunications Agency asked the Radio Society of Great Britain to conduct a "consultation exercise," a survey. Through articles in its journal, Radio Communications, and other British

Amateur Radio publications, readers were asked to express their opinion on the subject.
Out of 60,000 U.K. licensed amateurs, 1,413 responded, including 86 from "overseas". By a 2 to 1 margin the respondents opposed a code-free HF license. The RSGB said that with the world-wide amateur community expanding at some 7 percent per year, some method is needed to restrict access to the HF bands, which they say are already are very crowded and unlikely to expand. British hams also say if the current method of restriction, the Morse Code, is eliminated for High Frequency operation then some other "filter" to limit numbers of operators should be found.

(*****
AMSAT CALLS FOR PAPERS

The 1994 AMSAT-NA Annual Meeting and Space Symposium will be held October 7 to 9, in Orlando, Florida. AMSAT is seeking papers for the symposium and can provide authors with help in editing and graphics if needed. Papers are welcome even if the author is unable to attend the symposium.
Topics for all amateur satellite disciplines are sought, including introductory tutorials, satellite operations, Phase IIID design and development, and new applications and techniques.
Final drafts are requested on or about August 26.
Direct inquiries to Steve Park, WB9OEP, 12122 99th Ave North, Seminole, Florida 34642.

(*****
SW CONVENTION

On the convention scene, word that the 1994 ARRL Southwestern Division Convention will be held in San Diego, California on August 26th to the 28th at Town & Country Convention Center. For a registration form, please send a self addressed stamped envelope to Bob Boehme, W6RHV, Registration Chairman, 10340 Everell Place, Santee, California 92071. The event is sponsored by SANDARC, INC. in association with the San Diego County Amateur Radio Council.

(*****
DX-SCARBOROUGH REEF

In DX, after being delayed a day due to bad weather, the Scarborough Reef BS7H DXpedition hit the air waves on June 25th. Several sources in Japan say the DXpedition was only active from 09:00 to 23:00 UTC and then went QRT. They made around 2000 QSO's in which none of the contacts were made on CW because they did not bring a keyer.
In a related matter, New England Division DXAC Representative Bill Shipp, KC1AG, reports that DK9KX has withdrawn his petition for new country status for Scarborough Reef. No reason was given.

(*****
PETER I VIDEO

Also, another new ham radio video on DXing has been announced. "Journey to Peter I Island: Close to the Edge" is a 30 minute documentary on this dangerous and exciting DXpedition through the Falkland Islands, the Drake Passage and onto Peter I Island. The video shows enormous icebergs, animal and marine life, massive Antarctic storms and how the DXpedition team was able to make almost 60,000 QSOs. The documentary was produced professionally from 12 hours of videotape shot by Terry Dubson, W6MHB. A donation to obtain the show is required. Those that are interested in this documentary can contact Jerry Branson, AA6BB, 93787 Dorsey Lane, Junction City, Oregon, 97448.

(*****
NEW FCC COMMISSIONER SEES LITTLE BUT C-SPAN

The new FCC commissioner Susan Ness has described herself as a "C-SPAN junkie" who does not regularly watch commercial TV. Ness, speaking to reporters at an informal briefing in her office, said there is "nothing that I watch specifically every week" on commercial TV. Nevertheless, she said the Federal Communications Commission needs to insist that broadcasters "strive for better programming" so long as the First Amendment rights of station owners are protected.
Ness' disinterest in commercial TV fare stands in stark contrast to Rachel Chong, the other new FCC member who is a confessed "Star Trek" addict.

A.N.A.R.T.S. News Bulletin 819 24th July 1994

ANARTS meeting

There will be an ANARTS general meeting on Friday 5th August at 7.30 pm. For details please contact Col VK2CTD President on 624-3989, or Jim VK2BQS Vice-President on 6313560, or Pat VK2JPA Secretary on 230 3722 (wk).

Come along to our very friendly and informal meetings, they usually develop into interesting discussions, with tea or coffee and biscuits or better. Perhaps this quieter side of digital activities is for you, with the emphasis on HF digital modes, without the hurry scurry of 2 metre packet. We cover the range, right up to the latest which at time of writing is G-TOR. Who knows what the flavour will be next month?

Hope to see you there.

Contest report

Logs are coming in slowly, latest are from Albania, Italy and Slovakia, but we must remind you that the deadline is only about 5 weeks away.

One curious fact we have uncovered is that from 17 VKs in the contest, only 3 so far have sent in logs. Come on gentlemen, send in those logs and make a contest of it in VKland. If you are not interested in competing we would still like to have your log for a check log. You can send check logs to:

ANARTS Contest Manager
P.O. Box 93
Toongabbie
NSW 2146

VK6 Amtor mailbox

IPS weekly report
---

15 July - 21 July 1994

Issue No 29
Date of issue: 22 July 1994

INDICES:
Date 15 16 17 18 19 20 21
10cm 83 82 80 80 78 77 77
A 22 31 14 11 11 05 (10 estimated)
T 41 32 29 25 24 31 28

SUMMARY OF ACTIVITY

Solar activity was very low 17th, and 19th-21st July, and low
on 15th-16th, and 18th.

The geomagnetic field at Learmonth (WA) was quiet to unsettled
throughout the period. There was a brief active period early
on 15th July.

Ionospheric F2 critical frequencies at Sydney were near pre-
dicted monthly values throughout. Spread F was observed during
local night on 16th, and 20th-21st, and Sporadic E was ob-
served 0500-0700 UT on 21st July.

FORECAST FOR THE NEXT WEEK (22 - 28 July)

SOLAR: Very low to low.

GEOMAGNETIC: Quiet to unsettled until the 24th, then
increasing to unsettled to active levels until
the 29th.

IONOSPHERIC: Near predicted monthly values. Spread F may
degrade night communications.

NOTES OF INTEREST:

TROMELIN, FR5ZU/T. JACQUES DID SHOW UP ON FRIDAY 8 ON SSB AND ON SATURDAY 9 STARTED ALSO RTTY WHICH HAS BEEN THE FIRST TIME FROM THIS RARE PLACE. HE WILL LEAVE THE ISLAND ON 1ST AUGUST.

KERGUELEN, FT5XJ. ANOTHER RARE ONE ON RTTY DID SHOW UP ON THE AIR. PIERRE WILL BE GOING QRT SHORTLY FOR A REST PERIOD OF 3 MONTHS AND THEN RETURN.

AVES ISLAND, YV0. THE GROUP OF YV GUYS WILL VISIT THIS RARE ISLAND IN OCCASION OF 60 YEARS OF VENEZUELAN RADIOCLUB. THE OPERATION WILL START ON JULY 21 UNTIL 25. THEY WILL BE ACTIVE ON ALL BANDS SSB/CW/DIGI EXCEPT WARC BANDS AS YW0RCV. QSL VIA PASQUALE YV5AJ. LOOK FOR THEM AS COULD BE DIFFICULT FOR SOME TIME TO HAVE AVES IS. ON THE AIR.

ALBANIA, ZA. MIKE ZA1MH IS VERY ACTIVE ON ALL BANDS ICLUDING 160. MIKE IS AS AMERICAN MISSIONARY ON BALKAN PENNISULLA. HIS HOME CALL IS K5KWG BUT HE WANTS QSL DIRECT TO ZA. HIS WIFE IS ALSO ACTIVE LIKE ZA1EH.

BARBADOS, 8P. LOOK FOR MARK, FORMER CALL J5UAI ACTIVE NOW AS 8P9HB ON ALL MODE INCLUDING RTTY.

SEND YOUR BANDPASS AND NOTES FOR NEXT WEEK'S BULLETIN TO BOB, WB2CJL AT W5KSI.#NOLA.LA.USA.NA OR TO I5FLN.ITA.EU.

GL DE (DX2) LUCIANO, I5FLN AT ZS5S.ZAF.AF

TO ALL RADIO AMATEURS
ARLD040 DX NEWS

THE ITEMS IN THIS WEEK'S BULLETIN ARE COURTESY OF CHOD, VP2ML, THE DX BULLETIN, THE OPDX BULLETIN AND THE YANKEE CLIPPER CONTEST CLUB PACKETCLUSTER NETWORK. THANKS.

CONGO. RUDI, DK7PE, IS ON THE AIR AS TN0CW AND SHOULD REMAIN SO UNTIL JULY 21. HE HAS BEEN WORKED FROM NEW ENGLAND ON 1827 KHZ AT 0210, 0345 AND 0500Z. ALSO ON 3505 KHZ AT 0230 AND 0330Z.

MALAWI. PETER, ON6TT, MAY BE ACTIVE SOON AS 7Q7XT, PERHAPS FROM JULY 17 TO AUGUST 5. QSL VIA ON5NT.

BARBADOS. MARK, FORMERLY J5UAI, IS NOW 8P9HB. HE OPERATES CW, SSB AND RTTY. SL VIA NW8F.

TONGA. MASA, JE1DXC, SHOULD BE ON FROM TONGATAPU ISLAND, IOTA OC049, UNTIL JULY 27. AS OF PRESS TIME, NO LOCAL PACKET-CLUSTER SPOTS HAVE APPEARED FOR THIS ONE. QSL VIA CBA OR THE JARL BUREAU.

SABLE ISLAND. WAYNE, VE1CBK, SAYS THERE IS A CHANCE HE WILL BE SIGNING CY0SAB FROM JULY 18 TO 22. QSL TO VE1CBK, WAYNE KING, 63 BROOK STREET, LAKE FLETCHER, NS, CANADA B2T 1A5.

KERGUELEN ISLAND. PIERRE, FT5XJ, OPERATES RTTY AROUND 14085 KHZ BETWEEN 1215 AND 1245Z. QSL VIA F5NLL OR F1NLL IN THE CALLBOOK.

NORTHERN MARIANA ISLAND. TOSY, JA6VZB, PLANS TO BE ACTIVE AS AH0T FROM JULY 14 TO 17. LISTEN FOR HIM ON ALL BANDS WITH CW AND SSB. THERE IS A POSSIBILITY OF SOME RTTY. QSL VIA JA6BSM.

SAO TOME. CHARLIE, S92SS, HAS BEEN HEARD ON THE WARC BANDS. CHECK 18087 OR 10109 KHZ AROUND 2245Z. IF NOT THERE, CHECK 20 METER SSB BETWEEN 2100 AND 2300Z. S92YL HAS ALSO BEEN ACTIVE ON 15 AND 20 METERS BETWEEN 2030 AND 2130Z.

SUDAN. LOU, ST0K, HAS BEEN ON 20 METER CW AROUND 14019 KHZ BETWEEN 2230 AND 0030Z.

TOKELAU. STEVE, AA6LF, SHOULD BE ON FROM ZK3 LAND UNTIL AROUND JULY 18. MOST OF HIS RECENT ZK1 ACTIVITY WAS ON 20 METERS BETWEEN 0300 AND 0700Z. QSL VIA AA6LF.

SAINT PIERRE AND MIQUELON. DAVE, KA1NCN, WILL BE SIGNING FP/KA1NCN JULY 19 TO 25 WITH CW, SSB AND RTTY. QSL VIA AA1AS, EX KD1FE.

SUBSCRIPTIONS.

Members are reminded that ANARTS Financial Year commenced on 1st July 1994 and that subscriptions are now due. We have had a freebie for 12 months as a gesture to our members but it could not continue that way for ever.

So please send $10 (you know, the pretty blue note) to our Secretary who will process it under our new system which should prevent delays and transit problems.

Send to the official ANARTS address at Box 860, CROWS NEST. NSW. please.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at VK2RWI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI. Email addresses for the Broadcast Officer are :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We know we reach New

Zealand and many South Pacific islands, and we were reaching as far north as Japan when conditions were right. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

[Snitched from packet radio]

South Coast Packet Committee

In a recent broadcast, we gave news of a "planning" meeting of the South Coast Packet Committee. That meeting was held on Sunday 10th July at Nowra. John, VK2XY, of the Divisional Council, attended and there were representatives from the following clubs:

Illawarra Amateur Radio Society Inc.
Shoalhaven Amateur Radio Club
Mid South Coast Amateur Radio Club Inc.
Far South Coast Amateur Radio Club
WICEN South Coast

Equipment is being ordered and the committee hopes to make an early start on the packet radio "backbone" between Nowra and Wolumla. WICEN South Coast is working on details on the proposed upgrade of the equipment and antennas at VK2RUW (Knights Hill).

We hope you will see some visible results of the committee's work in the near future!

From: Stan, VK2EL, Secretary South Coast Packet Committee

WIA Examinations

The next exams to be held at N.S.W. W.I.A. will be held on 7th August at 109 Wigram Street Parramatta commencing at 12 midday.

Applications will close at 1400 hours on Thursday 28th July.

All enquiries should be to the office by phone (02) 689 2417 Monday to Friday between 1200 and 1300 hours, or leave a message on our answering machine outside these hours.

From Jim Walker VK2XJW Exam. Coordinator

Federal News
Tower standards

Standards Australia has released a new standard on the design of steel lattice towers and masts for communications purposes, which would be of wide interest to amateurs.

Standard AS 3995 sets out procedures for determining design wind speeds and wind loads to be used in the structural design of such steel lattice towers and masts.

The basis for the strength assessment of members and lattice connections is set out in the standard, which also incorporates design and analysis of guyed masts of this type, the design of cable tension members, footing design and criteria for assessment of existing structures.

In fact, as if the foregoing weren't comprehensive enough, the standard provides additional guidance on maintenance, imspection and access in appendices.

Standards Australia notes that AS 3995 is not intended to apply to the design of transmission line structures. In addition, the design of aluminium and cold-formed steel structures, other than those complying with AS 1163, is not covered by AS 3995, except in relation to access to the lattice towers and masts, says Standards Australia.

Intruder cleared from 20m

Maintaining a watch on amateur band intruders does work.

The Radio Society of Great Britain's (RSGB) intruder watch has scored a success in having a French military station cleared from an exclusive part of the 20 metre amateur band.

The French station was monitored using a 96 baud radioteletype transmitter on 14322 KHz.

Information passed to the British Radiocommunications Agency (RA) bore fruit when the RA brought the intrusion to the attention of the French authorities.

The transmitter was located on Reunion Island in the Indian Ocean and has not been reported on 20 metres since the end of January, according to the RSGB's press bulletin for July.

From the Federal Media Liaison Officer

Inventor of CP/M dies

CP/M enthusiasts all around the world (and there are still many of us) were saddened to learn of the death of Gary Kildall, the founder of Digital Research and creator of the popular 8-bit operating system CP/M. Gary died on 11th July, apparently as the result of a blow he suffered in a bar and subsequent heart attack.

Gary Kildall can be said to have started the "Personal Computer" revolution when he wrote the CP/M operating system in 1973. He subsequently founded the company Digital Research, and by 1981 his $10 million dollar company had sold 250,000 copies of CP/M (and who knows how many more were pirated?).

We'd like to take this opportunity to dispel a myth about Gary. Rumour has it that he was out flying, or playing golf or whatever, when IBM came knocking on his door and so went to Microsoft instead. The truth is that negotiations between Digital Research and IBM were breaking down, and IBM was already hedging its bets and was approaching Microsoft at the same time, for a system for the new 8086 microprocessor. When both products hit the market, DOS cost $40 and CP/M-86 cost $200 more.

Listeners sitting in front of their latest "whiz-bang" computers should pause a moment and pay tribute to the man and the operating system that started it all, Gary Kildall and CP/M.

-- Dave VK2KFU, a CP/M fanatic

WICEN News

About forty or so people attended a special presentation last Wednesday evening for those who provided assistance after the Newcastle Earthquake. The Lord Mayor of Newcastle presented Certificates of Thanks to those who took part; along with the certificates handed out at the WICEN AGM for those who assisted after the bushfires WICEN members are starting to gain some public recognition for their efforts. Thanks go to Pauline VK2GTB for arranging this presentation.

Next Saturday is the SES Sydney North Division GRN (Government Radio Network) communications exercise. It runs from 0830 to 1630, and will be followed by a debrief and barbecue at 1730. The formal briefing for this exercise will be on Tuesday, at Ku-Ring-Gai SES in Wahroonga. Please contact your local Co-ordinator, or David Ramsay VK2KLX, if you can help in what promises to be an interesting exercise.

Finally, the annual Yengo Horse Ride is next Sunday, and those who do not mind an early morning start are requested to contact John VK2GJB. A minimum of seven operators are required for this exercise, and they are requested to turn up on Saturday so that they can be shown their positions.

Next month is the regular City to Surf Fun Run, on Sunday 14th August, and Eric VK2KUR is looking for volunteers for this fun event; with luck there will be the usual barbecue afterwards.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channel 7150. If there are any other regular nets then we'd like to hear about them.

If members are interested in re-activating the State-wide HF net then the Executive Committee would be pleased to hear about it.

WICEN (NSW) Inc. operates a telephone BBS, and it is accessible at speeds from 300 to 14,400 bps on (02) 888-2763. Brett VK2XMU is the "Sysop", and all listeners are invited to use it.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Australian Amateur Television Club Inc.

The next meeting of the A.A.T.C. Inc is on the 2nd Sunday of August at 1.00 pm at Amateur Radio House, Parramatta.

The technical lecture on the day will be a demonstration of the IBM VGA to PAL composite video converter for ATV use, plus special information on our new 1250 MHz ATV receiver and finally, do not forget to bring that 1.4 meg blank floppy for special software release.

Lectures at meetings to come will be on the correct use of oscilloscopes, plus how to make coaxial cable aerials together with hints on assembly of the 1250 MHz receiver and hi gain pre-amp.

The A.A.T.C. welcomes any one with a technical interest to attend and enjoy the club's technical presentations.

For more information about the A.A.T.C. listen to the net on Tuesday nights from the Liverpool area on 146.625 MHz - approx. 19.30 hrs - or watch us on 1250 MHz from our Oakdale repeater anytime.

AATC Inc. Publicity Officer Bob Barnes VJ2R

Mid South Coast Amateur Radio Club Inc.

The next quarterly meeting of the Mid South Coast Amateur Radio Club, Inc. will be held at the "H Ranch" Little Forest Road, Milton on Saturday 6th August (the Saturday of the Bank Holiday weekend).

An interesting speaker has been engaged. Families and visitors are made very welcome and the meetings have a very minimum of dry old business!

Arrivals are from 10.30 onwards. The club provides tea, coffee, milk and sugar and there are barbecue facilities for those who like their meat either raw or overdone!

The location is a spectacular one offering extensive ocean and mountain views and you are assured of a friendly welcome.

Why not bring your family and your lunch to Little Forest, on the beautiful South Coast?

From Stan, VK2EL, for the Mid South Coast Amateur Radio Club, Inc.

VHF-UHF DX Group

At last Tuesday's VHF-UHF DX Group meeting at Amateur Radio House, John, VK2AUI showed a one hour videotape lecture on antennas by John Kraus, W8JK. The lecture consisted of a very well presented discussion and demonstration of antenna principles, and finished with a demonstration of the original 1886 experiments of Heinrich Hertz on a replica of his original apparatus.

Afterwards John, VK2AUI, gave a short presentation on a home-brew experimental 10 element quad for 70 centimetres. The Group would like to thank John for the tape and presentation, and also Alan, VK2DXE, for the loan of a video recorder and television monitor.

The Group also decided to hold a weekly activity night on 70 centimetres as well as the existing activity night on 2 metres. Thursday nights were nominated for 70 centimetre activity, commencing this week.

The next VHF-UHF DX Group meeting will be held in September and will include an equipment workshop on the construction of high power linear amplifiers and low noise preamplifiers.

Don't forget the Group's Tuesday activity night on 144 MHz and the new Thursday activity night on 70 centimetres. Things usually get underway after 8 pm.

Why not check into the Group's Sunday evening net on 146.5 MHz FM for further details. The Sunday evening net starts at 8:15 pm.

Submitted on behalf of Richard Sourlie, VK2ARS

Summerland Amateur Radio Club news

Fox-hunt

Have you ever been on a Fox-hunt, a radio Fox-hunt, that is?

Have you ever used an electronic "sniffer" in an attempt to locate a hidden transmitter?

Well, to find out what this is all about, come along to the club-rooms, 412 Richmond Hill Road, Goonellabah, for the Summerland Amateur Club's annual SARC-FEST, Sunday 31st July, commencing at 9 am.

There will be commercial displays of electronic and computer equipment, plus Bring & Buy Tables for your pre-loved gear.

Also a disposals stand for club sales.

NO deposit, NO interest, and NO time to pay.

Amateur stations will be operating on H.F., V.H.F. and Packet.

This annual event is usually a good trading and social day out for members, family and friends. Visitors very welcome.

Lunch and refreshments will be available during the day.

Roll up, bring along a friend, your surplus gear and plenty of cash.

For more info please contact Steve, VK2JSM, 066-626693; Ric, VK2EJV, on 066-895137; or Graeme, VK2GJ, 066-851336.

Maybe also on a local BBS via VK2RPL-2 668900.

Graeme, VK2GJ, Publicity Officer

omebody told me that radio amateurs use some kind of "Locator Code"
which gives the geographical location of the sender. I know that this
code is easily computable from the location given in a map, but I can't
remember the algorithm. Who can tell me (email please) how to calculate this
code ?

Thanks.

I agree. Specially when you are learning code. I might be
one of those lucky (?!) despicable No code techs, ex-CBers, that are
putting their act together and learning the acient art of learning Sam's Code.
I already went through 3 out of 4 sides of the tapes and I have a computer
random code generator for my Amiga. After spending all this time
learning those dit's and dahts and spending enough time
receiving non intelligent QSO's from my computer I decided
to venture the airwaves with my trusty SW radio. (I already knew the
whole alphabet, numbers and most of the punctuation marks so I said,
"What can I loose.. ") Went to 10 Meters.. nothing.. scanned up and down..
nothing.. Hmm. went up to 15 meter.. aha! some poor soul sending code. So I
sat down.. and copy.. and copy more letters.. and well.. I read it back
and it did not make sense to me. Show it to my girlfriend and
it did not make sense to her either. So I sat down and tried
to figure out by context. Some I could make it but between my
lack of code experience (well, maybe .. because of my lack of code
experience) and what Greg states. Anyway.. I went through 20 meter. Well
needless to say that I was able to pick a letter here and there but between
the time I figured out the letter and the time to write it down, about 5
more letters passed.

But I will not give up. I have 'till the 25th of August to take the
morse test. I do not think I'll be able to crank up to 13 WPM but you
never know. I'll continue scanning the dial every night and copy what
I can.

I'll be listening.. (I just got my callsign last friday, I have not bought a rig
yet.)

>so, how did you do it?

There's only one way. First you gut out that nice narrow *amateur
band only* circuit board, and then gut a handheld scanner and put
those guts in the HTX-202 case.

The HTX-202 is designed with a very narrow front end so that it
performs properly on the ham bands, unlike most other amateur
HTs that favor being scanners over being good communications
radios. The HTX-202 is not intended as a wide band scanner, and
attempts to make it one will only ruin it.

1397. Did CB's used to require licenses?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-25 14:58:54 UTC
From: fkilpatr@afit.af.mil
Message-ID: <fkilpatr.775148334@afit.af.mil>
Source record: 262845

I'm almost ashamed to admit it, but when I was about 10 (1975), I had a CB license and a little CB base station. I remember at that time that I had a CB license, but I don't remember if they were actually *required* or not. It seems like the CB bands were fairly well-behaved (politeness-wise) at that time, but it sounds like they are pretty chaotic now (I haven't listened since 75). This brings up the following question:

Why are the Ham bands more polite and well-behaved than the CB bands? Is it
A) The Ham license requirements force people to learn rules and require a greater commitment
B) The type of people who tend to use CB's are just "different" :)
C) The Ham's set a better example than the CB'ers.
D) The Ham's know they are accountable for their actions via their registered licenses, so they behave.
E) ?

I would be interested in hearing anyone's thoughts on this. I'm not trying to start a CB vs Ham flame war, I'm just trying to learn the real effect of requiring licenses vs not requiring them.

SB SPCL @ ARL $ARLX022
ARLX022 More power to British hams

ZCZC AX54
QST de W1AW
Special Bulletin 22 ARLX022
From ARRL Headquarters
Newington CT July 25, 1994
To all radio amateurs

SB SPCL ARL ARLX022
ARLX022 More power to British hams

Power restrictions in Great Britain have been lifted on parts of the 1.8 and 50 MHz bands, according to the Radio Society of Great Britain, and antenna and effective radiated power (ERP) restrictions no longer apply on 50 MHz.

Holders of the amateur Class A license may use 400 watts from 1.81 to 1.85 MHz, removing the power restriction on 1.81 to 1.83 MHz. The power limit for 1.85 to 2.0 MHz remains at 10 watts.

Holders of the full amateur Class A and B licenses may now run up to 400 watts between 50 and 51 MHz. The maximum permitted power between 51 and 52 MHz is still 100 watts. The ERP and antenna height restrictions have been removed from the whole of the 50 to 52 MHz band, allowing the use of any antenna, and maritime mobile operation is now permitted on 50 MHz.

In addition, all UK amateurs are now required to notify their local Radio Investigation Service office of unattended digital operation. The RSGB said this additional restriction was necessary following ''a number of problems'' with unattended operation. ''The procedure is far less onerous than that required for a repeater or beacon on a hilltop site, and requires only the agreeing of suitable emergency close-down procedures,'' the RSGB said.

Luis,

In case nobody else tells you, check QST magazine for the times and frequencies for the W1AW code practice. The schedule will tell you what speeds are being sent.

Good luck, you can do it.

1408. Re: Mounting HT to Mountain Bike ???

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-25 17:59:52 UTC
From: ad52@merhaba.cc.columbia.edu
Message-ID: <310uio$g8o@apakabar.cc.columbia.edu>
Source record: 262858

Keith (and anyone else bicycle mobile):

I ride a road bike, but find there's a considerable amount of vibration, even on smooth roads. I imagine there would be a lot more on a mountain bike. Also, I've fallen on my HT once while biking, so I decided to protect it more thoroughly. Basically, the way to get around the vibration problem is to put the HT on your body. I now use a leather tool holster (available from Sears for about $5) and clip the HT to my belt, inside the holster. There are also chest harnesses available, like the ones used by the Ski Patrol. Hook up your speaker/mic and an earphone (always leave one ear open when cycling!) and you should be set. Another alternative, which I use sometimes when touring, is to simply pack the radio away inside a pannier, away from the elements, and use it only when stopped.

If you do decide to mount it on the bike, make sure your mounting system includes some serious shock absorption, like maybe a thick foam pad, under the HT. Otherwise you might shorten its life considerably. Enjoy.

Harry: I don't recall Canadian authorities asking for proof of
purchase the three times I took gear into Canada, but be advised that
upon returning to the U.S. customs might. If you are audited
by Customs when returning to the U.S. they might ask you to
prove that your foreign-manufactured equipment was indeed
purchased in the U.S. You can use receipts or get a Custom's
form before leaving the U.S.

You can take amateur radio equipment into Canada with no
trouble, usually. The gotcha is when the Customs person
is unaware of the law. The ARRL can provide you with the
law paragraph. I had to use it once when the Customs official
saw my Yaesu box.

Worry about cameras too.

1411. Ramsey SlyFox

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-25 18:23:04 UTC
From: Cecil_A_Moore@ccm.CH.INTel.COM
Message-ID: <940725102304_2@ccm.hf.intel.com>
Source record: 262855

Text item: Text_1

Sometime ago someone posted a half-truth about the Ramsey SlyFox hidden transmitter. He said that the SlyFox didn't meet FCC specs according to a review in 73 magazine. In the interest of truth and fairness here are the facts from the 73 magazine article.

The poster's information was mostly incorrect. Quoting from the article, "... the level of the second harmonic was only 16 dB below that of the fundamental, much higher than allowed by the FCC". But this was _BEFORE THE UNIT WAS TUNED PROPERLY_ and the article itself says, "Any home-built transmitter... must be tuned up properly."

A clue that the unit was not tuned properly was its low power output. Quoting again, "But when I spread the turns on the kit unit... and retuned the final capacitor, power increased dramatically... The second, third, and fourth harmonics of the kit now measure -70, -50, and -70 dB respectively, _EASILY_ satisfying FCC requirements. All spurious emissions are better than 54 dB below the carrier..." (emphasis mine) Every kit builder should have a wattmeter and a dummy load,(available from Radio Shack).

In the 50's, it was a rare ham who didn't wind his own coils and everyone knew the coils might have to be adjusted for proper operation. It is a sad day in ham radio when kit-builders complain that they shouldn't have to pinch or spread coils that they had to wind for a kit. If you can't achieve resonance in a final by adjusting the capacitor, then you must adjust the coil... an extremely simple concept. Should a kit manual also be required to teach the physics that hams are supposed to know in order to pass their ham tests?

A, B, and D are probably the most accurate. It's an earned priviledge,
not payed for by $$ but earned through technical merit, albeit the modern
tests are easy compared to those 20 years ago. When you put effort into
earning a priviledge (ie; sweat), you tend to respect the effort of
others also. Besides, laying out >$1000 for a new station/antennas, etc,
is incentive to keeping the airwaves clean. (IMHO).

1750 Hz is an easy frequency to hit by giving a short whistle into
the mic (if you're talking about tone-burst). Some US repeaters used
to require a brief whistle (or tone) to bring up the machine.

1416. RS Freq Counter?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-25 20:22:35 UTC
From: Hugh_E._Wells.El_Segundo@xerox.COM
Message-ID: <"25-Jul-94.13:22:35.PDT".*.Hugh_E._Wells.El_Segundo@Xerox.com>
Source record: 262866

I never did laugh at the RS counter and I did own one for a short time. It had some good points, but I let mine go because of a couple of less desirable points.

The frequency accuracy appeared to be within the published spec. But, what I didn't care for was the constantly rolling digits at low or no signal and the rather poor sensitivity. The size, although larger than the competitors, was reasonable and the fact that it operated OK off of nicad cells.

Bottom line, I bought Star Tek and am now much happier!

Why 1750Hz or why a tone at all?

The answer to the latter is that our licensing authorities insist on it. They will not permit a unit which will retransmit a signal which just happens to come up on the air: you must take some positive action to make it come up. Currently that is mostly by tone access at the start of the QSO. We are slowly moving towards CTSS.

Why 1750Hz? Dunno! It has to be somehting, and I guess 1750 is right in the middle of the audio passband!

1420. Did CB's used to require

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-25 21:12:00 UTC
From: alan.wilensky@channel1.com
Message-ID: <40.8763.2426@channel1.com>
Source record: 262867

FA>time that I had a CB license, but I don't remember if they were
FA>actually *required* or not. It seems like the CB bands were fairly
FA>well-behaved (politeness-wise) at that time, but it sounds like
FA>they are pretty chaotic now (I haven't listened since 75). This
FA>brings up the following question:

When I was about 13 yo., I had a nice Hallicrafters tube CB base. This must have been around '74. At that time the band sounded very much like 2 meters.

On channels one through eight, you used a handle. On 10 through 19, I think, we used licensed call signs. No one I knew at that time did not have a real call sign. Many of these folks were older (to me) hams.

I became friends with many of these people, back then, and despite the fact that I was only 13, they invited me to get togethers, antenna parties, etc.

I miss that radio, It used to really 'clack', when I put the key down.

FA>Why are the Ham bands more polite and well-behaved than the CB bands?
FA>Is it
FA>A) The Ham license requirements force people to learn rules and
FA>require a greater commitment
FA>B) The type of people who tend to use CB's are just "different" :)
FA>C) The Ham's set a better example than the CB'ers.
FA>D) The Ham's know they are accountable for their actions via their
FA>registered licenses, so they behave.

AS far as the ham bands being more polite....have you been up on 2m in Boston? Maybe more orderly, but certainly not polite! 440 seems much more civil.

In my opinion, the amateur VHF bands could go the way of CB in the blink of an eye. But interestingly enough, there is a group of 11 meter SSB folks that self license, and seem to have a level of decorum not found on CB.

Also, the bar to operation on VHF is a little higher than CB, due to cost. But a renegade using used gear could go unlicensed and cause trouble. Its very hard to find sporadic portable activity.

FA>I would be interested in hearing anyone's thoughts on this. I'm not
FA>trying to start a CB vs Ham flame war, I'm just trying to learn the
FA>real effect of requiring licenses vs not requiring them.

The VHF ham bands are very usable, and entertaining, and you get a chance to join various repeater clubs etc. It seems there is more glue in ham radio than CB.

Ah, but that old Hallicrafters.....

Only known valid method for recieving out of band signals:

Determine frequencies of interest.
Select scanner that will hear those frequencies.
Buy that scanner.
Keep the HTX202 for its good intermod performance in band.

(i.e., there are NO valid mods to the HTX202!)

Try looking in ucsd again for APRS503.ZIP and APRS505u.ZIP

or try oak.oakland.edu in the packet directories.

Amateur Position Reporting System is normally found on 145.79 MHz

We use 145.01 MHz in northern and central California.

This software makes Two Meter Packet into a video game !

Have Fun

I use a W2A on my Beemer. The radio is clipped with the standard belt clip to the pocket of my leather tank cover. I use the "mini" speaker mic in the helmet with an earphone plugged into the socket provided on the mic. I use a Diamond SG7500 antenna mounted on a bracket I made from 1" square tubing. This antenna works OK, but if I did it again I would opt for a Larson 2/70. I use the diamond as it has a nice fold-over feature for putting the cover on the bike.

I use the standard HT battery. I made a mic harness with a switch in line so that the PTT is now on the left handlebar just inboard of' the horn button.

I tried using the standard rubber antenna, but it only worked in areas with excellent repeater coverage.

I've used this setup for 3 years with no problems. Radio seems to take the vibration and the twice daily plugging/unplugging without complaint. I ride 33 miles each way to work daily.

1431. Sister-in-law gets licens

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-25 23:38:00 UTC
From: mario.campos@nitelog.com
Message-ID: <cb.20513.2099@nitelog.com>
Source record: 262784

DD> My sister-in-law just received her license. Callsign: N3SYE. She
DD>passed her exam on 27 May, and the license arrived in the mail on 20 July.
DD>That's a 54 day delay (about eight weeks).
DD> Given the recent posts claiming 17 week delays, this was very quick.
DD>Anybody know why?

New computer set-up at FCC must be improving its output. Seems to me that
I've seen a few messages that are saying the same thing. Some messages state
that the new 610 form that went into effect in March is the reason why! The
new 610 and the software being used is compatible!

Message written at 9:41am, on Monday, July 25, 1994.

|> trying to start a CB vs Ham flame war, I'm just trying to learn the
|> real effect of requiring licenses vs not requiring them.

Yes, CB required licenses until the late 70's or early 80's. Calls took the form or "KAB1234" or "KABC1234". In the late 70's the CB fad took off, as did the number of obnoxious operators (prior to that the CB band sounded more or less like 2m does today!) The FCC finally threw up their hands and stopped regulating CB completely, except where CBers interfered with other services.

The ham bands are more polite (in most cases) because hams tend to be self-policing. If someone steps outside the rules, they find out about it fast. On the CB band, the rule-breakers outnumber those who would police them. Unlicensed operators stand out like a sore thumb on ham bands are are rebuked quickly.

It also might have something to do with the fact that new entry-level ham gear costs 4 times as much as entry level CB gear.

: I'm looking for some user info on 2M allmode rigs:

: Yaesu FT290
: Tempo VHF 1+

I had a VHF 1+ for a while. Pretty basic FM rig with a connector
covered by a cover. The manual and schematic described a SSB
adapter which I was unable to acquire. It put out ~20 Watts at
12.0 Volts (not 13.8) and was rather deaf by today's standards.
It made a reasonable first VHF rig.

>
>(i.e., there are NO valid mods to the HTX202!)

While this is quite correct from a practical point of view, a quick scan of the HTX-202 schematic leads me to believe the RF portion is capable of tuning across a wider range than 144-148MHz, but (a) you'd need to re-peak the front-end tuning circuit for the band segment of interest (which implies that you could only tune approximately 4Mhz) and (b) the controller CPU won't program the PLL chip out of band.

For example, if you had a dead HTX-202 which had a good RF portion but the CPU was bad, and you wanted to experiment, you could indeed feed a TTL level serial stream to the PLL chip (an MC145170) to play around. The serial TTL stream format is determined by looking at the '170 data sheet and HTX-202 (which phase detector and oscillator is used?). It is quite easy to write a little program on a PC to use the parallel port calculate and send the serial data to the '170.

Bottom line: stock radio can't be modified for out of band use without losing the stock functionality.

>Jeff NH6IL (oh how I wish I would have kept my old call: WA6QIJ)

Jeff, your remark intrigues me. I have yet to get my license, since I'm still a few weeks away from the test, but I can see that call signs are a very personal part of amateur radio. Why do you like your old 2x3 call sign better than the higher ranked 2x2?

I've heard that there once was a time when "preferred" call signs could be obtained, like personalized license plates I suppose. Too bad we can't have that any more, though I do hope there's a small chance of me getting the call sign K7LID.

From: mconner@rain.atms.purdue.edu
Message-ID: <CtIx0M.9qF@mozo.cc.purdue.edu>
Source record: 262797

I picked up a 12V 7Ah lead-calcium battery the other day for a pretty good price and was wondering if there are any special considerations on charging/discharging them. The original use was apparently for hobby applications (R/C or model rocket), but I don't see why it shouldn't work OK for powering my HT (max. draw 1.5A).

According to the guy I bought it from, it can be charged by a car battery charger if put on trickle charge. Is this true? If not, what sort of charger do I need?

Usually if you just *telnet* to the station and then type *conv* after logging on, you will be connected to the *converse bridge*. I have no idea if he might have it set up differently, but that's the way the guys do it out here in So. CA.

Good luck & TTYL,

Sandy's reply speaks the truth. Also, just because a ham has a TNC or
operates packet does not necessarily mean he uses one of the few
internet-to -packet gateways in the U.S. Many of the gateways may or may
not support "normal" AX.25 packet users, or just amateur TCP/IP nodes.
Check local listings for time and station, find out what your intended
addressee is doing with packet radio. Better yet, get a ham license and
join the fun on the air.

I would also like to see this info very much. In fact, I was going to post this and then saw Steve's post and decided to do a follow up post. I am interested in 2m and 440 repeaters, particularly on the lower Cape.

>Steve, a nice little book to have with you is the ARRL repeater directory. It
>is fairly cheap and is usually good for a couple of years at least. :-)

Last year, when I was on Cape Cod I tried this method. The directory listed a number of repeaters. I was only able to bring one of them up, and got no replies when giving my call and asking for a reply. Perhaps I was not copyable. I think this repeater was in or near Dennis, MA. The directory also listed a repeater nearby, but there was no activity on its frequency and I was not able to bring it (if it indeed existed) up. So the ARRL directory may not be the best source of information for this area. Or the repeater may have been down temporarily.

Actually, on this frequency I was able to make contacts via a repeater in Maine, near the Canadian border. It was quite a treat to talk on 2m to hams hundreds of miles away. So, the effort was a success - just not in the way I expected :-).

To be fair, this is the only significant problem I have had with the ARRL repeater directory. As I said, it may not be the directory's fault. It seems to be accurate in my region.

I also checked with Conway Yee's online directory, only one entry in Falmouth which is pretty far from where I'll be. Perhaps hams in the area would like to help him out with more submissions. His address is yee@mipg.upenn.edu.

Hopefully, I'll hear from some Cape Codders soon.

>I have tried to e-mail you a few different times before but it always seems to
>get returned.
Yes, Steve. I sent you email also. It was returned 'user unknown'. It appeared to go to the correct host.

Freeman A. Kilpatrick <fkilpatr@afit.af.mil> wrote:

>I'm almost ashamed to admit it, but when I was about 10 (1975), I
>had a CB license and a little CB base station.

CB used to be licensed, but there was no test. As a pre-teen in the early 1960's, I remember walking home from school every day and carefully noticing all the different types of antennas people put up (how's that for being a nerd?). Through this, the closest I got to amateur radio was the use of a CB station run by a local church, KOX-0528, and building a tube AM transmitter in electronics class (I've still got it, and some spare 50C5's to boot).

I believe the licensing requirement was dropped during the CB craze of the 1970's.

By that time, I'd completely forgot about radio. Only in the last few months did I buy two CB HT's for the purpose of car-convoy communications in our sports car club. To say that I was dismayed to hear what CB has turned into is putting it mildly (is whistling into the mike *really* the way to call people, or is this a local phenomenon?). In fact, in the two months I've had these units, I've never talked to anyone, except for doing a simple distance-test with my father!

But I should point out that the only reason I've been lurking in this group for the past two weeks (and now going for a tech+ license) is because of the presence of hams in rec.radio.cb and my slow realization that there are people who take radio more seriously and can still have fun (incidentally, I thought Rob Bellville's idea of Ham Radio Bootcamp was great).

No such modification exists -- sorry! The RS unit gets it reputation
for being virtually intermod-proof by having a tight receiver that
can't be modified for out-of-band reception.

The only modification that works is to go back to Radio Shack, buy a
handheld scanner the same size, and tape it to the HTX-202. Voila --
extended receive. <g>

I believe that many of us are proud of the length of time we've
been licensed, and one's callsign is a fairly good indicator of
the time you've put in the service. My WA6QIJ call was issued
back in 1976. When I moved to Hawaii I was hoping to receive
a KH6xx call but instead got the N callsign. I guess
having been in the military I feel that the N calls somehow
belong to the Navy/Coast Guard, and hams should only have W
and K calls.

If we eventually get to `buy' our calls I'll ask for my WA6 call
back. According to the callbook it hasn't been re-issued.

All repeaters in Australia are carrier-operated, but the encroaching pager interference (148-150) will probably see some of them adopt CTCSS. All repeaters are "open" by the way.

There simply aren't as many repeaters here, because private ownership of a repeater is not permitted, although I have no doubt that there are a few boot-leg ones around, protected by CTCSS....

1454. Connecticut QSO Party this weekend!

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-26 07:56:33 UTC
From: Tommy the Tourist <nobody@soda.berkeley.edu>
Message-ID: <312fjh$273@agate.berkeley.edu>
Source record: 262806

The Candlewood Amateur Radio Association (CARA) will sponsor the
1994 Connecticut QSO party, to be held 30 JUL 2000 to 31 JUL 0400
UTC and 31 JUL 1200-2000 UTC. Bands will be 160, 80, 40, 20, 15,
10, 6 & 2m. Stations may be worked once per mode on each band.
CARA will operate W1AW (the ARRL station Hiram Maxim memorial
station) on Sunday, 31 JUL. As well the club station, W1QI, will
operate throughout the contest.

Plaques will be awarded to first place CT stations for several
categories. Certificates will be awarded first place stations in
other states, as well as second and third place in all states.

To all those who participate, good luck. To those that don't, if
you hear a station calling CQ Connecticut QSO Party, by all
means, pick up the mike and reply!

For an operating package, contact Frank, N8WXQ, (address
in Callbook).

That's correct. In the 'old days' a repeater had to be activated
by a special signal, a tone. This was regulatory. Nowadays
the repeaters trigger on their squelch, just like the 'professional'
repeaters use(d) to do.
The fact that a tone was/is used, is to prevent the repeater being
opened unnecessary for whatever reason.

Ciao, Remco PA3FYM

1456. Digest of Articles - QST May 94 (Long - 38k)

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-26 09:34:01 UTC
From: wvanho@infinet.com
Message-ID: <312la9$989@rigel.infinet.com>
Source record: 262810
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

DIGEST OF ARTICLES - QST May, 1994

Following are digests of articles printed in the May, 1994 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. Subsequent issues will be posted one per week until they "catch up" to the current date in mid-1994, thereafter monthly.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:Key Components of Modern Receiver Design - Part 1
Author>Rohde, Dr. Ulrich - KA2WEU

Source>QST May 94, pp. 29-32
Abstract>First of a series on receiver design. Criticises current design in dynamic range, IMD, i.f. filtering, etc. Suggests changes.

Digest>This is the first installment of a series of articles discussing modern communications receiver design and ways that performance may be further improved in the future. In this installment, Dr. Rohde criticizes a number of aspects of current receiver design and suggests circuit changes that promise to improve performance substantially.

Dynamic range is one of the prime criteria for performance evaluation. The author points out that there are several kinds of dynamic range that must be considered. The first is simple "AGC range"; i.e. the ability to maintain a constant audio output with varying input signal level. A more important criterion can be termed "intermodulation distortion (IMD) dynamic range". Second- and third-order IMD increase by 2-dB and 3-dB respectively as the input signal level increases by 1-dB. Assuming linearity at all points on the dynamic scale, at some point each kind of IMD reaches a level equal to the signal itself; this is the so-called "intercept point". This is, by definition, a kind of dynamic range.

The author points out that most receiver testing today measures only third-order IMD on the assumption that front-end filtering reduces the second-order distortion to negligible amounts, but he shows that the diode switching schemes used to select the front end filters as bands are switched often cause the very kind of IMD that the filters are meant to eliminate. Using relays, rather than diodes, to do the switching would greatly improve results.

Another problem of dynamic range performance measurement is the tone spacing specified in testing. Typically, it is 20- or 25-KHz. separation, but the interference that amateurs must live with often comes from signals much closer than that! Filters in the first i.f. (so-called "roofing" filters) are typically very broad - 15-KHz. bandwidth is common. If the IMD test is made with an interfering signal 20-KHz. away, the measurement may show a good result, but if, in real life, the user is struggling to receive a weak DX signal with strong QRM 5-KHz. away, the result will be very different, indeed. Clearly, a first i.f. filter more like the 2- to 4-KHz. SSB filters would be more appropriate.

Compounding the problem, AGC voltage in most amateur receivers is derived solely from the second i.f., which usually contains a much narrower filter. Often, a strong interfering signal may be outside the bandwidth of the narrow filter and thus inaudible but well within the bandwidth of the roofing filter. In that case, the AGC is of no value, at all, since the strong signal will tend to block the first i.f., greatly reducing the signal-to-noise ratio of the desired signal. The author makes a persuasive case that there should be two independent AGC loops, one around the first i.f. and the second around the second.

Another problem related to the derivation of AGC voltage is the performance of S-meters in making meaningful measurements of signal level. Traditionally, S-9 has been defined as 50-microvolts at an impedance of 50-ohms. Scaling that down in 6-dB. steps to S-1 leaves a signal level of 0.15-microvolts which often is completely readable. But if the S-meter scale is to have any realistic meaning, it must have a number low enough to mean a signal that is barely detectable but not readable. Furthermore, in most receivers when a front-end attenuator is used to reduce overload, the S-meter reading is similarly attenuated. A completely independent front-end AGC loop that also is the source of the S-meter readings is, again, the solution.

The last problem that Dr. Rohde addresses in this article is the desensitization caused by spurious signals and phase noise emanating from the synthesizer and local oscillator.

Title>TA2:You Can Build: A Compact Loop Antenna for 30 Through 12 Meters
Author>Capon, Robert - WA3ULH
Source>QST May 94, pp. 33-36
Abstract>Construction details of a 30-inch (80-cm) diameter transmitting loop antenna.

Digest>This article gives all construction details for building a transmitting loop antenna tunable from 10- to 25-MHz. The author reports that the total cost of materials was about $35.00.

It is a single-turn loop formed from a length of 5/8-inch (16-mm.) diameter soft copper tubing 8-feet, 3-inches (2.515-meters) in length formed into a near-perfect circle slightly over 2-1/2 feet (80-cm.) in diameter. The two ends are bent to within 1-inch (25-mm.) of each other, in line, and are fastened together with a PVC pipe coupling, which acts as an insulator.

A variable tuning capacitor with a range of 2- to 100-pf. is connected between the two ends to complete the loop. Care must be taken to make the electrical connections with an absolute minimum of electrical resistance. This dictates that straps made of strip copper must be wrapped around the tubing near the ends and soldered over the full area of contact. The other ends of those straps lead to the capacitor.

The author used a small capacitor purchased from Ten-Tec, their part number 23227. However, its air gap spacing is so small that transmitting power is limited to 7-watts. More than that causes the capacitor to arc over. For higher power, a capacitor with larger air gaps must be substituted.

The antenna is mounted in a vertical plane, attached at the top and bottom of the circle to a mast made of 1-inch (25-mm.) diameter PVC pipe some 8-feet (2.44-meters) tall. The ends of the loop and the capacitor are at the top end of the pipe; the other side of the circle is attached partway down the mast. The mast, itself, is supported on a base made of similar size PVC pipe, cut in pieces and assembled into the shape of a

capital "H" using couplings, elbows, and tees to hold it together. A tee at the center of the cross-bar of the "H" acts as a socket into which the mast is inserted.

At 20-meters, the operating bandwidth is only about 10- to 20-KHz., so it is necessary to retune the antenna almost every time the frequency is changed. The author uses a remote-controlled reversible d.c. motor with integral 1-rpm gear-reducer to adjust the capacitor.

The antenna is fed by inductive coupling from a small, untuned loop mounted on the same supporting mast inside the bottom of the main loop. It is formed from a 20-inch (50.8-cm.) length of RG-8 coax with the outer covering and braid shield removed. 50-ohm coax feedline is soldered directly to the two ends of the small loop; in addition, a small piece of copper braid attaches the braid-side of the feedline to the main loop at a point directly opposite the variable capacitor. The author reports that this feed arrangement provides low SWR feed. He does not so state, but presumably he adjusted the size of the small feed-loop to that which gives the lowest SWR.

Mr. Capon states that the size of this loop can be scaled up to a size suitable for operating 20- to 40-meters. This would require a loop diameter of 1.7-meters (5-feet, 6-15/16 inches), tubing length 5.341 meters (17-feet, 6 inches), and a small loop diameter of 0.34-meters (1-foot, 1-3/8 inches).

Title>TA3:A Calibrated Noise Source for Amateur Radio
Author>Sabin, William E. - W0IYH
Source>QST May 94, pp. 37-40
Abstract>Construction details for a laboratory noise source. Includes recommended way for getting it calibrated.

Digest>Mr. Sabin, author of this article, previously wrote an article: "Measuring SSB/CW Receiver Sensitivity", published in QST, October, 1992, pp. 30-34. In a sidebar to the preceeding article, he gave full construction information for a True-RMS-to-DC Converter, an instrument necessary to perform the sensitivity measurements that he described. The calibrated noise source, which is the subject of the present article, is an instrument that broadens considerably the range of receiver performance measurements that can be made.

Uncalibrated noise sources are well known, being used with bridge circuits in antenna measurements, and for other purposes. But with the use of a precisely calibrated source, the noise figure, the excess noise ratio, and frequency response of receivers can also be accurately measured.

The article describes construction of two models; one is for use over the frequency range of 0.5- to 500-MHz., the other covers 1-Mhz. to 2.5-GHz. Both models use a diode specifically designed and manufactured for noise generation. It is manufactured by NOISE/COM, their Model

NC302L. The circuits of both models are similar and are comprised of a number of resistors with 1-percent precision, plus a few other common electronic parts. The models differ only in that board layout, components, and coax connectors of the higher-frequency one must be suitable for microwave use.

The key to success in making accurate measurements is the calibration. Since not many hams will have access to laboratory instrumentation capable of calibrating the noise source, NOISE/COM has offered to calibrate home-built units for $25 plus shipping charges. The address is: NOISE/COM Company, East 49, Midland Ave., Paramus, NJ 07652. Contact Gary Simonyan. PC boards are available from FAR Circuits, 18N640 Field Ct., Dundee, IL 60118-9269, for $5.00 each, including domestic USA shipping. A board template package can be obtained from the ARRL for an SASE. Address the request to Sabin Noise Source Template, Technical Dept. Secretary, ARRL, 225 Main St., Newington, CT 06111.

Title>TA4:Amateur Use of Telescoping Masts
Author>Haviland, R. P. - W4MB
Source>QST May 94, pp. 41-45
Abstract>Describes uses for telescoping masts and safety precautions required to avoid injury in using them.

Digest>Telescoping masts are commonly used to support TV antennas in fringe areas. They are inexpensive, and are available from a number of suppliers, including Radio Shack.

They are made of relatively light-gauge steel strip, formed into tubing with a welded seam. Typically, each piece of tubing is 10-feet (3-meters) long and the diameter is stepped so that each piece fits inside the one that precedes it. When extended, one foot (30-cm.) of each piece overlaps the next smaller one. Consequently, a mast made of five 10-foot lengths (the largest size offered), stands 46-feet in height.

Telescoping masts are suitable for semi-portable use as well as for light-duty fixed station uses. Using them requires secure guying and careful attention to safety during erection. The author recommends that the nested mast be erected on a firm base, guyed at the top of the first section with four guys and plumbed vertical. After that has been accomplished, one or two ladders can be tied to it and the remaining sections pushed up by one or more people standing on the ladders. The mast must be guyed at each joint and at the top. The article contains the information necessary to calculate the wind loading, tension on guys, the maximum size and weight of antennas that can be mounted on them. Also the article clearly points out the hazards inherent in erecting and using such a mast, and strongly advises that safety of all concerned must be the primary guiding principle in erecting and using these masts.

Title>TA5:Under the Hood V: Solid State Devices
Author>Bergeron, Bryan - NU1N
Source>QST May 94, pp. 46-48
Abstract>Elementary description of diodes, transistors, and ICs.

Digest>This is the fifth installment in a series of articles that describe the practical aspects of using various types of electronic components in circuits. It discusses diodes, transistors, and integrated circuits (ICs).

Semiconductor diodes are discussed as to their usage, i.e. for signal switching, power rectification, frequency conversion, and other uses. They are also classified by their active material: germanium or silicon. Finally, specialized diodes such as Schottkeys, Zeners, LEDs, and photodiodes are described.

Transistors are classified as NPN and PNP types, field-effect types (FETs), JFETs and MOSFETS, and power FETs. They are also classified by their packaging and heat-sinking provisions.

Integrated circuits (ICs) are briefly discussed and the difference between TTL and CMOS designs are mentioned. Only a hint of the proliferation of types that are offered can be expressed in an article so general as this one.

Photographs are included showing a few sample types of the devices mentioned.

PRODUCT REVIEW (PR)

Title>PR1:Yaesu FT-840 MF/HF Transceiver
Author>Ford, Steve - WB8IMY
Source>QST May 94, pp. 80-83
Abstract>Performance review of Yaesu's latest "entry level" HF/MF transceiver.

Digest>The FT-840 is a so-called "entry level" radio, which means that compromises have been made in the design to hold cost down. Yet it contains many, if not most, of the most important features that the most expensive, state-of-the-art rig contains.

Receiver

The receiver portion has general coverage, 100-KHz. to 30-MHz. The large tuning dial has a comfortable feel and can be switched from a tuning rate of 5-KHz. per knob revolution to 10-KHz. The LCD frequency indicator reads the operating frequency to the nearest 10-Hertz. It has an RIT control (but not XIT) and two independent VFOs selected by an A/B switch. One-hundred tunable memory channels store frequency, mode, filter, RIT setting, and split-frequency status. I.F. Shift control is provided and the switchable AGC provides "Normal" and "Fast" (but no "Off"). An effective noise blanker is included and a single-step attenuator provides 10-dB. attenuation. Squelch is available in all

modes.

Sensitivity and dynamic range are creditable. With a 500-Hertz i.f. filter, the noise floor measures -133 to -138 dBm., depending upon frequency. A 10-dB. signal plus noise to noise ratio occurs at between 0.6 and 1.0 microvolt, again dependent upon frequency. The blocking dynamic range is between 106 and 113 dB. and the third-order IMD dynamic range is between 88- and 90-dB. The third-order input intercept varies from -0.9 to -1.7 dBm.

TRANSMITTER

The reviewer found that he received good reports on the audio when operating SSB. He also found that the speech processing is quite effective. His one criticism of the phone operation is the lack of a VOX function.

CW operation is very satisfactory compared with other current transceivers in the same price class. First, the CW pitch is easily changed; more importantly, it is possible to switch the beat oscillator from one sideband to the other - a delight to CW operators, and a feature that is missing in many of the most expensive, top-of-the-line transceivers on the market today.

Operating the digital modes is possible, but not very convenient, for several reasons. There is no FSK function, there is no straightforward way to utilize the narrow-band CW filter in the digital modes, and there is not even an audio input connector for digital operating. Audio input from the TNC must be fed into the mike input jack. Although it is not easy, there is a complicated "work-around" scheme to operate RTTY, PacTOR, etc., which involves operating in split mode, receiving in CW and transmitting in SSB, then delicately setting the split offset, CW sideband, and i.f. shift. The manual recommends RTTY output to be limited to no more than 50-watts, but the reviewer was able to operate at full power output for short periods of time with no difficulty.

The reviewer's final conclusion was: "Yaesu's FT-840 offers features and performance beyond what I would have expected in a "starter" rig just a few short years ago. Although it's missing a few things..., it's the type of radio you will enjoy for years before you feel the need to upgrade".

Title>PR2:S and S Engineering ARK 40 CW QRP Transceiver Kit
Author>Gold, Jeff - AC4HF
Source>QST May 94, pp. 833-85
Abstract>Construction of a QRP transceiver from a kit.

Digest>The ARK 40 is a small package that packs a surprising number of features that provide good performance and pleasurable operating. It is a 40-meter CW transceiver that covers a frequency range of 7.0- to 7.15-MHz. (20- and 30-meter versions are also available). It contains a superheterodyne receiver and a 5-watt transmitter.

The receiver contains a 600-Hertz crystal filter and a 200-Hertz audio filter, RIT, AGC, and QSK keying.

Receiver performance is quite creditable. Its noise floor is -127 dBm., blocking dynamic range is 95-dB., third-order IMD dynamic range 94-dB., and third-order input intercept is 14.2-dBm.

In transmitting, the reviewer found the keying to be excellent.

Mr. Gold found no difficulty in building the kit, although it is not recommended as a project for beginners. The manufacturer guarantees that the completed rig will operate as specified. The terms of their guarantee promise that they will fix any problems in the completed unit if it is returned to them. If the problem was caused by the manufacturer, there will be no charge; if by the builder, they will repair it for a charge not to exceed $25.00.

The manufacturer's list price is $270. An optional keyer kit adds another $40. The manufacturer's address is: S and S Engineering, 1410 Brown Rd., Smithburg, MD 21783.

HINTS AND KINKS (HK)
Conductor: David Newkirk - WJ1Z

Title>HK1:Beeper Madness
Author>Hoyt, Emerson - WX7E; Moller, Jan - K6FM; and Reinke, John - AB6I
Source>QST May 94, pp. 86-87
Abstract>Construction information for three different beepers to be used to signal end-of-transmission.

Digest>Many ham repeaters, as well as communicators on commercial and military circuits, use beepers to signify end-of-transmission. Three separate circuits to perform the electronic function are described by the three authors.

The first, described as a "power-miser" beeper, was built by WX7E. It utilizes a CD4098BE dual-multivibrator IC plus two multiple-logic chips and a handful of passive components. All the semiconductors used are CMOS types and the current consumption is very low. The unit is powered by a built-in 9-volt battery without an On-Off switch; the builder states that it should last for the duration of its shelf-life.

The one by K6FM, in contrast, uses an analog twin-T audio oscillator and performs the logic with reed relays. He finds that it works properly with supply voltages from 6.3- to 9-volts.

The third author, AB6I, described his unit in QST April, 1991, p. 47; in this issue he is offering an improvement to the circuit. The improvement actually eliminates four components from the circuit.

Title>HK2:More "Don't Lose the Little Bits"
Author>Roux, Jim - W4YA
Source>QST May 94, p. 87
Abstract>How to use a vacuum cleaner to retrieve small parts out of a thick carpet.

Digest>To retrieve small electronic parts that may fall on a thick carpet and disappear, the author holds a single thickness of a nylon stocking over the end of a vacuum cleaner hose with a rubber band. The vacuum will lift the part up against the nylon and hold it for retrieval.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Assoc. Technical Editor

Title>TC1:HF Mobiling: Mag Mounts and Grounding
Author>Brogdon, Al - K3KMO
Source>QST May 94, p. 88
Abstract>A method of mounting five separate antennas on a van roof.

Digest>Mr. Brogdon, Managing Editor of QST, is also noted for his exploits in operating CW mobile in both automobiles and motorcycles. In this letter, he describes a method of mounting five separate whip antennas on the roof of his Toyota van.

First, he bought four Lakeview Tri-Magnet Mounts and partially disassembled them. He ended with four subassemblies, each of which is comprised of a pair of magnets on a short aluminum bar. Next he cut a 4-1/2 foot piece of aluminum channel similar to that on which the magnets are mounted and installed five equally-spaced whip receptacles along the channel. Then he attached one of the pairs of magnets crosswise at each end of the bar, and the other two equally spaced along the length of the bar so that they would attach themselves to the steel roof. The result was a very effective mount for five separate antennas.

He installed an antenna switch on the dashboard and ran separate coax feedlines through the rear hatch to the individual antennas, so that he could switch bands from the driver's seat. To eliminate a severe ignition noise problem, he ran a length of 1-inch wide copper braid from the mounting bar to the chassis of the vehicle. This effectively eliminated the noise.

Title>TC2:Terminated Folded Dipole
Author>Belrose, John S. (Jack) - VE2CV
Source>QST May 94, pp. 88-89
Abstract>A terminated folded dipole transmits usable signals over a very wide bandwidth, but it under-performs a multiband dipole with tuned feeders by 3- to 5-dB.

Digest>A terminated folded dipole (TFD) is a non-resonant length of parallel wires, connected at both ends, fed in the middle of one conductor. In the center of the other conductor is a 600-ohm non-inductive resistor. They are widely used in military applications because of their wide-band, non-resonant operation. Barker and Williamson (B&W) has supplied the amateur and commercial markets their Model 370-15 for a number of years.

The author, using Elnec software, made a computer study of a 90-foot TFD, and also reports the results of a field test of the B&W 370-15. With the article are two graphic plots that show the results.

The graph showing the results of the computer analysis indicates that the radiation from the antenna is approximately flat over the range of 6- to 30-MHz. with a slight upward bias. In dBi, the antenna gain ranges from about -2 at the low-frequency end to +2 at the high end of the range. Below 6-MHz., the gain drops rapidly, falling below -20 dBi at 2.0 MHz.

The graph of field measurements indicates exactly the same pattern. In addition, a dipole mounted at the same height is plotted on the same graph with the B&W antenna. Since a dipole should, theoretically, indicate a gain of slightly more than 2-dBi, as expected the dipole shows a gain of 3- to 5-dBi over the B&W 370-15.

Mr. Belrose concludes that he sees no reason for a radio amateur to use a TFD, since a dipole, or a multi-band dipole with tuned feeders, outperforms the TFD over the entire frequency range.

NEW HAM COMPANION (NHC)

The New Ham Companion is a regular section of QST. It features articles of primary interest to newcomers to the hobby.

Title>NHC1:Making Your Mobile More Portable
Author>Mendelsohn, Steve - WA2DHF
Source>QST May 94, pp. 62-63
Abstract>Wire all connections to a mobile rig through one plug so that it is easy to remove the rig when the car is parked.

Digest>The author makes the point that in many, if not most, urban areas, it is only prudent to remove mobile transceivers and other valuable gear from an automobile when it is parked. He makes it easy to remove his own transceiver by passing all electrical connections through one multi-pin connector. Hence, he needs to remove only one plug when disconnecting the rig.

The connector that he likes is the Amphenol XLR in-line plug/socket connector. It is available with from 3 to 8 pins.

The remainder of the article gives step-by-step instructions of how to cut each lead and pass it through the XLR plug connector.

Title>NHC2:Conquering the Code
Author>Bellamy, Gail - AA8MY
Source>QST May 94, p. 64
Abstract>Mnemonic and other hints for learning Morse code.

Digest>This article contains some hints from the author concerning methods she used to learn Morse code. For transcribing, her stenographic experience taught her that it is easier to write rapidly in narrow columns on a stenographic notebook.

Her experience in playing music helped in two ways: first, when playing in an ensemble at a rapid tempo, she knows that if she misses reading one note, she must skip it and go to the next. The same is true in reading letters of Morse code. Second, the rhythm of Morse code has similarities to the rhythm of music, and one should think of it rhythmically.

Finally, she used mnemonics to memorize the individual letters. For example, she used the word "around" to represent the letter "A"; "around" is pronounced with an unaccented, followed by an accented, syllable - the same as the "dit - dah" of the letter "A".

Title>NHC3:Interference in Reverse
Author>Freedom, Tom - W3HVE
Source>QST May 94, p. 65
Abstract>Persuading a neighbor to eliminate a source of noise.

Digest>Mr. Freedom tells the story of radio interference that he received from a neighbor's house that affected all bands from 160- to 15-meters. He was unsuccessful in getting the neighbor's cooperation, so appealed to the FCC, who were less than completely helpful. Finally, he got results after appealing to his Congressman.

Title>NHC4:But How Do I USE It?
Author>Danzer, Paul M. - N1II
Source>QST May 94, pp. 66-68
Abstract>Elementary instructions in operating a communications receiver.

Digest>This article is comprised of elementary instructions concerning receiver tuning, the use of narrow and wide bandpass filters, and the signal width of SSB and CW signals. The instructions use diagrams illustrating the spectrum width of the signals plotted on a frequency scale that represents a radio dial.

Title>NHC5:A PC Shopper's Guide
Author>Ford, Steve - WB8IMY and Kleinschmidt, Kirk - NT0Z
Source>QST May 94, pp. 69-71
Abstract>How amateurs use computers.

Digest>The authors list the various major uses that ham radio makes of computers, and also discusses the various features that current personal computers should have to be most useful in the hamshack. The major uses are: satellite operations, packet radio, contesting, record-keeping, digital modes of communications, and image transmission.

Title>The Doctor is IN
Author>Various
Source>QST May 94, p. 69
Abstract>Questions and Answers of interest to newcomers.

Digest>The questions discussed this month include the effects of rain on antenna installations; the effect of ice on antennas; the FM "Capture" effect; the difference between the ARES and the RACES; possible causes of an indicated drop in the voltage output of a high-voltage power supply; and the possible need for separate antennas to operate at both ends of the 6-meter band.

RADIO TIPS (RT)

These are short items, scattered among the articles in the NEW HAM COMPANION section.

Title>RT1:Traffic Handling Is For Everyone
Author>Kleinschmidt, Kirk - NT0Z
Source>QST May 94, p. 63
Abstract>Explanation of traffic nets.

Digest>In this short item, Mr. Kleinschmidt encourages all hams to participate in traffic nets. He lists some typical calls and responses between the Net Control Station (NCS) and new participants, and makes other suggestions for a newcomer's first entry into an operating net.

Title>RT2:Join the QRP Craze
Author>Kleinschmidt, Kirk - NT0Z
Source>QST May 94, p. 68
Abstract>The fun of QRP operations.

Digest>The author describes QRP operating and lists the activities specific to low-power operation. He also suggests that interested hams might want to join the QRP Amateur Radio Club International (QRP ARCI) and gives the address: Mike Kilgore - KG5F, 2046 Ash Hill Rd., Carrollton, TX 75007. Please enclose a SASE with two units of postage.

Title>RT3:What's DSP?
Author>Ford, Steve - WB8IMY
Source>QST May 94, p. 71
Abstract>Digital signal processing in amateur radio.

Digest>Mr. Ford defines digital signal processing (DSP) and describes the DSP filters that are currently available for amateur use. He also describes the probability that within the forseeable future, DSP hardware will be developed capable of operating at high r.f. frequencies. When that time comes, it will be possible to process signals in the r.f. stages of receivers and transmitters, and HF superheterodyne receivers, with their fixed i.f. frequencies, may become totally obsolete!

GENERAL INTEREST ARTICLES

Title>GI1:An Enchanted Sweepstakes Expedition
Author>Margelli, Chip - K7JA
Source>QST May 94, pp. 21-23
Abstract>Good contest results using miniature loop antenna.

Digest>Mr. Margelli relates the succes that he had in the 1993 CW sweepstakes using 150-watts of output, dipoles for 80- and 40-meters, plus an AEA Isoloop miniature loop antenna for bands 10-, 15-, and 20-meters. His QTH was the mountaintop home of Pedro Piza, Jr. - NP4A.

He had an excellent score in the contest, and logged a total of 1388 QSOs. Of that total, almost half were on 40-meters; but when the higher bands were open, he worked 10-, 15-, and 20-meters using the tiny loop antenna, with excellent results.

Title>GI2:Yukon DXing With Flair
Author>Reisenauer, John - NL7TB
Source>QST May 94, pp. 24-26
Abstract>Operating Sweepstakes from the far north.

Digest>Mr. Reisenauer and his friend, Kent - NL7VJ, operated in the 1993 phone Sweepstakes from a campsite on the Alcan Highway in Yukon Territory in late November while temperatures routinely plunged below -40 degrees F. each night. Their "shack" was an RV and they mounted a Triband beam, plus other antennas, on a tower on the roof of the vehicle.

Their operation was very successful and they logged a total of 930 contest QSOs plus some 600 non-contest contacts, including many DX contacts.

Title>GI3:A Look at Digital Audio Broadcasting
Author>Kleinschmidt, Kirk - NT0Z
Source>QST May 94, pp. 27-28
Abstract>Digital audio in future radio broadcasting.

Digest>Digital audio is defined as a modulation scheme in which an audio signal is sampled and digitized, the digital signal is processed and, perhaps, compressed, and one or more such signals are impressed on a carrier for broadcasting. In some of the proposed broadcasting modes,

as many as 20 stereo pairs would be broadcast in a single channel using a spread spectrum technique. In all cases, the fidelity would be such as can now be achieved only on compact disks (CDs).

Under consideration are plans to broadcast on "S-band" (2310-2360 MHz) either directly from satellites to consumers, or by impressing the digitial signals on a sub-carrier alongside conventional FM signals. However, it is unlikely that commercial broadcasting will begin before 1997, at the earliest.

Title>GI4:Portable S5
Author>Gartenberg, Sharon Machlis - KC1YR
Source>QST May 94, pp. 50-53
Abstract>American hams visit Slovenia.

Digest>Mrs. Gartenberg, along with her husband, Lee - KA1USL, spent their 1993 summer vacation operating ham radio in Slovenia. They stayed in the Alpine resort town of Cerkno (population 2200) as guests of the Cerkno Radio Club, who allowed free use of the club station on a mountain top, surrounded by stunning scenery in all directions. Slovenia's prefix, S5, was still so new that, when KC1YR/S5 came on the air, a pileup was immediate and never let up. For that reason, she never left the 20-meter band and logged more than 900 QSOs in 3 days!

I need plans to build a tiny two meter transmitter that will operate in beacon operation on less than a watt. A ham friend and I plan to launch this transmitter in model rockets in order to do some experimenting with ham radio. I know that controllers for models that operate less than a watt don't require identification to be given. Would this apply in this situation? Please send me any ideas or references as to how I could build this device and if and how I will need to use it to transmit identification.

Thank You,

>they are pretty chaotic now (I haven't listened since 75). This
>brings up the following question:
>Why are the Ham bands more polite and well-behaved than the CB bands?

Yes, CB once required a license, though there was no test. It *was*
a polite service back in the 1950s and 1960s, but that's because
US *society* was polite back then too. The 55 MPH speed limit came
in time to follow the Great Society experiment and in time for the
Woodstock generation. General respect for law and order broke down,
kids didn't have firm parental supervision any more because women
went into the work force, etc. Eventually we got the chaos we have
today with kids shooting kids on the street, and foul mouthed cretins
making fools of themselves on radio.

Oddly enough, those same people, when met in other contexts, don't
behave like pseudo-redneck idiots. That's key to understanding
the psychology of CB. CB is an anonymous service where people
hide behind "handles" instead of using their real names. Thus they
can act out their most abberent fantasies without the shame that
such acts would cause them if done openly under their own names.

Amateur radio is made up mostly of older people who grew up before
the societal breakdown in morals, and amateurs still insist on
usage of real names. Thus the service is a throwback to the 1950s
in it's social behavior.

Yes, you get no TX but you can RX. If you have a service manual, it isn't
hard to build the converter.

I use some heavy duty velcro from Radio Shack. It is made of plastic. I
actually have it holding up my TM732A mobile which is stuck to the metal wall
behind the seat on my pickup. This stuff is really strong. I also use it to
hold the control head to the dash. I trimmed off some of the "hooks" because
the stuff is so strong it is hard to separate the two pieces.

fkilpatr@afit.af.mil (Freeman A. Kilpatrick) writes:

As I understand it, the FCC required a license and $20 fee until about 1977, when it dropped the fee to $4. The backlog got so big that they eventually dropped the fee entirely. They also started allowing the use of temporary callsigns for use during the wait (K+initials+ZIP code, I think). They eventually threw their collective hands in the air and stopped requiring licenses at all. Since there was no license, I guess they figured there shouldn't be any enforcement either.

Does this trend remind you of another service??

Reminicences (sp?) about CB below ...

>I'm almost ashamed to admit it, but when I was about 10 (1975), I

I'm not. I had a CB from '77 till I lost interest in about late '78/early '79.

>had a CB license and a little CB base station. I remember at that

Me too. And one on my bike. XM52-30670 (Canadian).

>actually *required* or not. It seems like the CB bands were fairly >well-behaved (politeness-wise) at that time, but it sounds like

They were around Montreal right up until the height of the CB craze (about a year delayed from the US - peaked in late '77 or so). After that it started to go down hill.

We even had nets on channel ten where you called the net control and asked to call a station, then moved off. Fox hunts, an active REACT group (XM52-30000 - how's that for a trivial memory?), monthly get togethers at the Ponderosa. My friend (XM52-49283, now VE2IBV) and I used to build antennas for fun (but *never* for DX :-).

Now I'm an Advanced class ham. Wouldn't have got into it at all except for the deletion of the Morse requirement (I took the theory classes in '78 or so, but the code stopped me). Interesting that once I got in, I found out that there is nothing to learning the code (getting the speed up is another matter).

Now that I'm all "grown up" I do fox hunts, am active in ARES/SKYWARN, go to monthly get togethers (thankfully *not* at the Ponderosa!) and build antennas (*for* DX).

Needless to say, it *really* ticks me off when hams berate CBers *just* for being CBers. There are ignorant and inconsiderate people everywhere,

some are CBers, some are hams (usually found on 75m or 14.313 MHz :-).
Some people just like radios.

73,

Peter Laws <plaws@comp.uark.edu> |"That's one small step for man, one giant

Hap Holly, KC9RP, originator and host of the weekly R.A.I.N. Report
will be the guest this Sunday, July 31, 1994, on the nationally syndicated
Ham Radio & More show. It airs live Sundays at 6:00pm EST on the Talk
America Network and via satellite on Spacenet 3, Transponder 9,
6.8 audio. Tune in to hear what Hap has to say. For station information,
call 602-241-1510.
73, Len, KB7LPW

PS. A station list was just posted on rec.radio.info

1470. Radio mods by FTP. Where?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-26 15:10:43 UTC
From: ccoprfm@prism.gatech.edu
Message-ID: <31391j$j90@acmex.gatech.edu>
Source record: 262820

Hello,

I know there used to be at least one FTP site that archived all the mods to various radios. I seem to have lost the address though. Can someone tell me what it is?

Barring that, I need the current list of mods for the Yaesu FT-530. I know there are at least 2, one to enable out of band Rx/Tx; and one to just enable out of band Rx....

I really need this info sometime today (7/26/04), so please reply via e-mail; even if you don't reply today.....

Much Thanks,

Monte KC4GPW

Sorry about the delay in following up. I've been out of town for over a week.

Brian Kantor (brian@nothing.ucsd.edu) wrote:
: My goodness, if all you want is to work local repeaters and short
: distance simplex, just buy an SO239 connector (about a dollar) and
: five pieces of 1/16" brazing rod.

Rest of description of simple homebrew antenna deleted.

Brian, of course you can build your own. That's always an option. All it costs is time and materials. It can also be fun if that's what you're in the mood to do. And well constructed homebrew antennas can work as well as *anything* available commercially, Cushcraft, Diamond or anybody else. But that's not what we were talking about. And at the ~$40-$50 price of a Ringo Ranger II (or less at hamfests) you'd still be hard pressed to build something for *much* less if you didn't already have materials on hand.

Note also that I never said a word about "local" repeaters or "short" distance simplex. I can work repeaters from ridiculous distances. 'Course I live in Colorado where we have 14K' granite towers for some repeaters :-) On the other hand, I've had some interesting FM simplex contacts with stations over some very poor paths at quite impressive distances for a vertical. Greeley to Colorado Springs or Laramie Wyoming for example. Check the map and note that both paths have substantial ridges in the way. That's not bad for a "fit to be a ground rod, maybe" kind of antenna.

: The coax to hook it up will cost more than the antenna did.

The coax to hook up my Ringo cost more than my Ringo too.

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:

: I didn't equate the Ringo to a wet string. I merely noted that we all
: know that less than optimum antennas *can* be used, *even* a wet string.
: As inclusion of the ducky indicates, I was saying that inefficient antennas
: are often (but not always) acceptable compromises in the amateur service.

Gary, I don't think I've grossly misread your opinion about the Ringo.
As I read back through your comments, the inference is pretty strong
that you consider the antenna to be little more than junk.

BTW, I think I'd change your last sentence to "inefficient antennas are
usually (but not always) acceptable compromises in the amateur
service." And therin may lie the crux of our difference in opinion.
Most of us simply cannot justify the time/money/room/effort required for
optimal antenna solutions, so we compromise. Those compromises should
be well considered ones and thus require information with a bit more
resolution than A is junk and B is great. That lack of information was
really what I was reacting to.

: >Again agreed. It's really a case, though, of when enough is enough.

: The thread was about which antenna is *better*, not which is *enough*.

Ahh, but how do you define better? I'll make the statement that at the
time I put up my Ringo, it was the *BEST* antenna for me. Best because
in the real world there are many variables which determine good
solutions. Certainly performance is one of the variables, but not the
only one. Time, money, availability, ease of assembly, experience of
the user and a host of other things come into play. At the time my
Ringo went up, I was just starting out. I wasn't sure how serious I was
going to get, didn't want to spend much money (couldn't really justify
it) and didn't have much time to spend (and again couldn't really justify
spending much). For a small investment in both time and money, I got a
solid performer that has served me very well.

Now that I'm a bit more serious, I'm looking at higher performance
options, including some homebrew ones. I'm more interested now, and
more willing to invest more time and money. But I would certainly
recommend a newcomer consider the Ringo particularly under circumstances
similar to mine. And I'll also stand by my original statement to that
newcomer to worry more about getting whatever they put up as high as
possible rather than about getting the ultimate gain vertical built to
withstand hurricanes.

: If you're going to buy a commercial antenna, you really
: should try to get the most value for your dollar. I don't think the

: Ringo fills that bill very well.

Curious statement for an antenna that can be purchased so cheaply. I think the Ringo provides very good bang for the buck.

Enough. Readers are likely beginning to think I'm some kind of Cushcraft fanatic and that's really not the case.

1476. repeaters in the microwave bands

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-26 18:29:47 UTC
From: wkinning@nyx10.cs.du.edu
Message-ID: <313kmr$1bm@nyx10.cs.du.edu>
Source record: 262826

I've seen a lot of articles in QST and other magazines on how to build simple transceivers for point to point CW and SSB use. There are also articles on dedicated point to point links, using microwaves for linking repeaters together or as a high speed packet backbone. I got to wondering if it was possible to construct omnidirectional repeaters and end-user packet BBS connections using microwaves.

All of the microwave antenna articles I've read describe directional antennas like beams and dishes. What type of omnidirectional antenna would you use for microwave frequencies ? I've seen some stacked dipole antennas for 1.2 Ghz. What works on 10 Ghz ?

Microwave packet links would allow users to have access to much more sophisticated services on BBSes like X-windows and hypertext. The software for these services exists but the 1200 bps links most people use are way too slow. On the user end you'd need a network card for your PC, a high speed modem/radio, and a transverter to microwave frequencies.

Also, has anyone conducted experiments with microwave repeaters ? The highest frequency repeaters listed in the ARRL repeater directory are in 1.2 Ghz amateur band. You could build a self contained dish and transverter that connects to 2m HT with a short coax line. This would allow people to get on the air inexpensively without buying a dedicated microwave transceiver.

The line of sight requirements would limit the coverage of microwaves compared to VHF so you'd tend to have more repeaters with smaller coverage areas, especially in areas without mountains or tall buildings for repeater sites. I don't see any technical problem in implementing this with current microwave components. There are problems with:

1) Lack of good signal path during casual use due to walls, trees, buildings, etc.

2) Health hazards from radiation if you crank up the power enough to get a good signal because of walls, trees, buildings, etc.

3) Multipath interference due to walls, tree, buildings, etc. Multipath can be reduced somewhat by using special antennas and signal processing.

So, writing as one who has read about microwaves, but never used them what are the biggest problems ? Are omnidirectional microwave communications above 1.2 Ghz possible ?

Message-ID: <313og7$ab8@thecourier.cims.nyu.edu>
Source record: 262757

In answer to the earlier question, ftp to ftp.cs.buffalo.edu
and cd to /pub/ham-radio. You'll find a slew of stuff there,
including packet to internet gateways.

Now, on a related note, has anyone set up a personal email
gateway? I'd like to have my system periodically check
my Internet email and, upon a request from me over packet,
send me the subject lines of each of the pieces of mail. Then,
just like PBBS's, I would transmit a letter or number to indicate
to the system which note(s) I want to read in full.

Now, my boss has a habit of making the point of a message
only in the subject line with a blank body. Should I modify
the script to weed out ALL messages from people that are
PROBABLY sending me work-related email? I would include,
of course, code to weed out non-transmittable text in the
personal messages.

What are the rules about unattended (but solicited by the
control operator) transmission of data? I
seem to recall reading that I would need to hold an advanced
license before I could program my computer to transmit
data.. with scripted telecommunications programs so easy
to use, I'd hate for that to be true.

It could be where we live, but i'll back Scott as to the best vertical antenna for the money being a RR 2.
Now if we're talking about a Cushcraft AR 270 (the dual band ringo)
it can be beat with a rollup 2 meter twinlead j-pole. I've done it.
No one that I know will keep this antenna if they do any comparisons with it.

Hey, I used to be KBL6905 in Los Angeles, before interim CB licenses existed. You see, at a certain point CB's were being sold by the bushel, and the FCC was being flooded with license apps, and nobody waited for their license to arrive in the mail. As a result, you received an "interim license application" with the CB radio you bought. This consisted of some random letters, followed by a blank area where you would put in your zip code. So, while waiting for your real license, you had an interim license of something like KKCB90032 as your callsign.
Anyway, I got my license before that craze started. I still remember the callsign of a friend I used to talk to frequently: KRV5352.

Most of the hams in our four wheel drive club also have CB's to use when we travel as a group. Since anyone can use a CB, it is more convenient for new people. I haven't heard any locals abusing the CB, most of the irritating stuff comes from skip-don't know where.

It's lack of being able to summon help at a distance is why I got my license. After watching a guy make an autopatch from the middle of nowhere, I realized I needed some type of emergency communications just in case. Now that I have my no-code tech license, I am starting to learn code to upgrade to general.

Hi There...

I just came back from 18 months in the UK where all of the repeaters (2m at least...) were on the 1750 Hz tone. As I was a poor North American with a handheld which didn't do the 1750 thing, I had to whistle into every conversation (at least our tones are sub-audible...). I eventually built a small circuit into my speaker-mike.

The reason I was given was QRM, and associated free-loaders on the band. The folks in my area (SW UK) had a lot of problems with guys running modified CB radios (CB is FM in the UK) making a lot of noise out-of-band.

BTW: If you currently hold a licence, the folks over there will give you (for a renumeration, of course...) a two-month permit, a year if you can provide a permanent address.

Darryl, Do actually think we could sell a dual band amp in kit form and expect the average Joe to build it? My gosh, the ARRL couldn't get their fx to work and you of course read what joe moell could do. (A shorted disc cap... come on, I've yet to encounte
r one of those. A solder bridge, yes. But that's my gut feeling!) I wish I could let you see some of the incredible solder/assembly jobs we get back here, and I like to think our manuals are pretty good. It's hard to make a kit that can be easily built and
aligned by the average ham on his kitchen table. I like to think we make it as easy as possible to enable the builder to get something working with as little test equipment as possible. With all the talk about how you need a spectrum analyzer before you p
ut that on the air... it makes me wonder what the hams did years ago when they built most of their gear???

Although I appreciate your offer, past experience with our 2M kit and seeing the level of expertise of the FM operator makes the mere thought of a 2M/440 kit nearly impossible. Thanks, tho'

Cecil, The manual clearly states to spread the coils for max power output. We purposely have the coils wound with a 'tad' too much inductance - it's easier to spread the coils a bit than to have to add more turns!

de the old college days easier - I changed many a tank circuit, modifying commercial 2 way radios for buddies of mine!

Message-ID: <WATSON.94Jul26165939@wink.corp.sgi.com>
Source record: 262756

I live in a severely antenna-restricted community, so recently I've become interested in four-wheeling or backpacking up to the tops of big hills or little mountains, throwing a wire between a couple of trees, and working some HF DX from the great outdoors for an afternoon or overnight.

If I backpacked in, I suppose I'd be "limited" to QRP by the size of the battery I could carry, but if I drove to the QTH, I could run a 100-watt transceiver from the truck's battery.

Obviously, I'm inexperienced, so I'd be interested in people's ideas and stories about doing this.

1) There must be some great tricks like using slingshots, fishing weights and monofilament to get the antenna up. Any others? Good tips for preventing tangles in wire antennas? Equipment pointers?

2) How do you do good (portable) grounding in the field?

3) For people living in the SF Bay Area: what are some likely sites within a couple of hours' drive? Where I can get away from the crowds but which are fairly accessible? Any good "Bay Area backroads" suggestions for this? Do State or County parks prohibit radio operations?

4) I am intrigued by the idea of QRP operation. Are there any power-efficient QRP SSB transceivers with excellent receiver sections, or must I operate with separate tranmitter and receiver?

Thanks and 73,
-David

But John, adding more turns would further increase the inductance:

L = (ND)^2 / (18D + 40S)

where L = inductance in uH
N = number of turns
D = diameter
S = length of coil all in inches

Hi there, I just talked to some ham guru and he told me that they just got theirnew computer system on line. From all that I have been reading/hearing, I figurethat these NEW forms from the FCC must have been in preparation for the new systems arrival. The guru guy said something about just needing to train people how to use the computer and then it will take care of its self and get the average back log down to just 6-8 weeks, but judging on how people are now getting their licenses back so fast, I suppose the time will go faster than that! So if we are patient we will see our licenses and upgrades back in no timeat all! GOD, I LOVE TECHNOLOGY!!!

Just my $0.02,
Justin

Hi John, you already make a dual-band rig. I've got my FX-146 and FX-440 mounted together as a unit for a cross-band repeater and they both fit perfectly into an IC-22S mobile mount.

I'd say about $350 in nice condition. Try to find one with the CW filter installed. They're nice radios, if you don't mind tuning up the tube-finals of the transmitter. I operated one for years at a club station with no problems.

which is the exact reason I gave for them choosing 1750 Hz - it's
an easy frequency to hit by whistling into your mic.

For those of you in California, listen to the CDF between 151.190 and
151.455 MHz - they still use tone burst to access their repeaters.
When I worked for them I would occasionally make the mistake (hee hee)
of giving a long rising whistle on State 1 to see how many repeaters
I could key up at once; unkeying I hear a mess of heterodynes.

Your tax dollars at work.

CDF has finally gone to ctcss and dtmf tones for their repeaters. Seems
there were not enough of those tax dollars left in the coffers to get
radio manufactures to integrate the multi-tone burst system into modern
mobile and portable radios.

They are able to bring up remote weather sensors using dtmf and get back
a voice responce.

The guys now have fun linking their region frequency to an other distant
region on the state-wide microwave network. Just like amateur radio :)

I sometimes take mine along. I have a pack that sits on a rear rack. The pack has a top pocket. I put the FT470, enclosed in a "pouch", in the top pocket. A lot of the shock is absorbed by the flexing of the pack. If it's really going to be a rough ride, I'll wrap it in a sweatshirt and put it inside the pack. Havn't had any problems. Or, if 2M is sufficient, I just put my old TH21 in the center back pocket of my jersey.

I had thought about mounting a bnc bulkhead conn. on the rack and putting a rubber duck on it to run mobile with a spkr mic, but haven't tried that yet.

From: mellis@ramcad.pica.army.mil
Message-ID: <CtLs7L.24o@pica.army.mil>
Source record: 262770

I recently found an old Astatic D-104 mike in a junk box. I bought
it YEARS ago for base station CB. Man, that thing is ugly. Looks like
it was made from a chrome bumper :-)

Anyway, I thought it would be nice to hook up to my HTX202 for occasional
base operations. I believe it has an amp in the mic base, why else would
a 9V battery be in there ?

Anyone have any tips/procedures/schematics/horror_stories for the
thing? I'd probably make a little interface box with the appropriate
connectors going in & out.

Thanks!

: Could someone email me or post a current DXCC list?

Well, you could try getting the current DXCC list directly from
the ARRL. Try sending an email request as follows (I think this is
the way it works):

info@arrl.org

In the text message area enter:

send help
quit

This should get you started. There may be another command of
"send index" or "send files", but I don't recall exactly.
Anyway, the current version of the DXCC list "should" be there.

Source record: 262713

Howdy. What is the nominal voltage of a rechargeable (Eveready) 9 volt NiCad?

Due to the proliferation of all this UL-unapproved ham stuff on the market,
I have become large consumer of 9V batteries. I decided to switch to
rechargeables and went out and bought a charger and 4 batteries.
I charged the batteries per (charger) mfgrs instructions for 10 hours.
Afterwards, the NiCads only read about 8.5 volts. On the package of the
batteries is the lone marking USE 7.2V - what does that mean? The charger,
made in PRC, puts out about 10.5 volts, no load. Is this normal?

Thanx for reading this blurb.

Matt asks:

Can anybody help me out? I am looking for information
on speed detection radar that the police use. Specifically, doplar
radar. I would like information on accuracy. If you have done any
tests or know someone who has and could help me, I would greatly
appriciate it.

So tell us Matt, just where did you get the ticket, and how fast were you
going? 8-D

1520. Non-hams and Gateways between Packet and the Internet

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-27 16:02:47 UTC
From: jangus@skyld.grendel.com
Message-ID: <775324967snx@skyld.grendel.com>
Source record: 262773

Greetings one and all. I have been running an e-mail gateway for the past several years now, and I allow ALL mail to go between the two systems.

For years the standard sendup in QST for field day and other contests has been to show a picture of a bunch of non-hams gathered around a microphone and taking turns taking with someone out there at the other end of the RF. (Odd that you don't see too many non-ham CW ops gathered around a hand key.)

And every month in QST is a write up on NTS traffic handled. I.e., a message from somebody to somebody else, neither of which *has* to be a licensed amateur radio operator.

So.... I run my gateway along that same principle. I am passing a message along for a third party, and possibly to a "fourth" party at the other end. Pretty simple concept. And I havn't had any problems with it since I've had the system up and running.

Whether the filter is 1. I grab the microphone away from someone or 2. I tear up the NTS radio-gram slip or 3. I delete the mail rather than send it, it is (in my opinion) all one and the same as far as message handling. Just a differnt medium in use.

1521. REQUEST: Help finding WWV receiver!

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-27 16:23:12 UTC
From: saur@char.vnet.net
Message-ID: <3161lg$5s7@char.vnet.net>
Source record: 262772
Cross-posted to: sci.astro,sci.electronics,rec.radio.amateur.misc,rec.radio.shortwave

Forgive me if one or two of the groups are inappropriate.
I'm posting this for a freind who doesn't have usenet access.

OK, I'm at my wits end. I have tried to locate a WWV receiver
that is not $350.00 . I have scanned the ads in SKY&TEL, Astronomy
and the Ham radio mags for anything concerning a WWV receiver or
kit. I know Radio Shack used to sell them but THEY DO NOT SELL them
anymore. There was a review in SKY&TEL (Apr or May 1993)of a receiver
but I was unable to contact the company.

Please, Please If anyone has RECENTLY acquired one of these radios
or kits from a reliable source I would name my first born after
you :-) . But seriously I am in a real fix. I am getting serious
about Lunar Occultations (for people in the radio news groups this
activity requires precise timings recorded with the WWV signal in
the background as a time reference) and have not been able to
acquire one at a reasonable cost (> $50).

Thanks in advance,
Aaron

What kind of experiences has anybody had using Comet's CH-32 Miracle Baby HT antenna? I know it won't give me the same performance as the already inefficient stock rubber duck that came with my HT but what can I reasonably expect? Can I accomplish at 2 watts with the CH-32 what I can now do with 5 watts and my stock rubber duck or is the CH-32 a real dummy load?

Source record: 262777

The truck is about $30.00 for the plates I think $5.00
or something nominal for callsign plates, regular prestige
plates are only $15.00. When you go to change your registration
bring any vehicles you are changing with you as they want to
inspect the vin number for the title change. License is about
$10.00 for four years. Drop me a note telling me where you
are ending up and I'll send you a repeater and net list for
the area you will be in. 73 Jerry KC5EGG

Hello,

I recently acquired a Kenwood TS-430S, without any options.

I am looking for anyone who has or knows of a place where I
can get any of the following:

o CW filter (270Hz)
o CW filter (500Hz)
o SB filter (1.8KHz)
o AM filter (6KHz)
o FM board option

Please email to 'debaker@bnr.ca' or phone 214-684-7351 (day).
Thanks.

Hi, I am from Tucker Electronics and Computers. We sell the Sangean ATS-800 shortwave receiver for $89. It will cover WWV on 5,10 and 15 Mhz. It is not the world's best shortwave receiver, but it's portable and will offer much better performance than a kit (which we do have available as the MFJ-8100K $59.95). If you are interested, you can call us at 1-800-527-4642 or via Internet. Hope this helps.

: this with current microwave components. There are problems with:
:
Actually, I recently worked Don, WB1FKF, over a 179 km knife edge path over
Grand Manadnock, NH. He said my signal strength was the same on all bands
we worked--144, 432, 903, 1296, 2304, 3456, 5760, and 10 GHz. He had too
much line noise to hear me on 50 MHz. Of course, as a QRP station, I'm only
running a little more power on the lower bands compared to the 2 watts on 13
and 6 cm. Of course, the microwave stuff has to be working properly--you
can't make contacts if you are off frequency or you have water in the coax
connectors or.... Also, I'm using antennas of roughly the same size--I'm
not trying to make contacts with miniature microwave antennas.

Source record: 262709

I got yet another letter forwarded from my parents with enough
postage to pay for the International Airmail rate!

This isn't necessary--Hawaii happens to be on of the 50 states.
You can send a letter there with a mere 29 cents and it will receive
the same service if you addressed it to someone across town :-).

This also applies to US possessions and US diplomatic mail, though
the latter often doesn't like to publicize their addresses....

You can even send cards to American servicemen at APO addresses at
the first class rate. I once got a card from an HL9 station (South
Korea) in a mere 36 hours.

As a final example, amateurs in the Virgin Islands can
use s.a.s.e.s franked with US stamps.

Does the U.S. postal service really
deserve a tip for excellent service?

Hello,
A friend of mine just bought an Alinco DR 592 mobile dual band
and he wants to know if there is a mod that will combine the two
audio outout jacks into one. thereby being able to listen to
the 2m and 440 bands on ONE ext speaker. any help appreciated.

please e-mail me my news reading is slower than my news server
delete que.

thanks
-jason

I was explaining to my wife last night that some hams refer to their children as harmonics. When she asked why, I explained that, for example, if you were transmiting a signal on 7 MHz, there'd be a harmonic at 14 MHz, then a smaller harmonic at 21 MHz, kind of like a family.

I continued to explain that with radio equiment, harmonics are bad because they cause all kinds of unwanted interference. My wife said that must be another reason why children are harmonics.

I thought this was terribly funny.

I would reccomend getting a cheap shortwave receiver, it ought to
be able to pick up WWV. Also you get to listen to Radio Moldavia!
You should be able to pick one up for about $60-70.

```

I may be wrong, but I interpreted the stickyness problem
to be in the glue of the piece attached to the dash.. in which
case I would suggest lightly sanding (at least not armor-alling)
the area where you are trying to get it to stay. I too use
Radio Shack "hook and loop" tape, but I don't know if it's
heavy duty. Of course, it's only holding a Pro34 vertically
which might not put too much stress on the hold.

Remember the golden rule of velcro, the more area covered on
both surfaces, the better the hold.

Uh, well, I was thinking about getting a cheap shortwave receiver for that
purpose, but notice that some of them conveniently omit 10MHz coverage,
and maybe some other usually-reliable frequencies.

Now there is a cheap Ramsey kit SWL receiver; and I got one and put it
together, but so far have found it quite difficult to tune in WWV.
So I need to figure out a way to use a 10.260MHz xtal to set the L.O.
frequency. (which is probably just a matter of taking out their inductor
and varicap and putting the xtal in its place, but I haven't tried it yet.)

I believe you missed the point.

He said "it's easier to spread the coils a bit than to have to add more
turns" - those two concepts work opposite each other. I think he meant
to say "it's easier to spread the coils a bit than to have to REDUCE
the number of turns", either of which would reduce the inductance.

I use a Radio Shack time cube for exactly the same purpose,
which I got at a ham fest. So
if you can go to a ham fest you might pick one up, although I haven't
seen any for a while I'll admit.

I don't know what price or where you've been looking at receivers
but I nootice adverts in places that sell radar detector (LaMark?
I keep getting their junk mail all the time) for what look like quite
nice shortwave radios about the size of a hefty wallet for abotuu $100
that are PLL synthesised and will get WWV and everything else as
well. Presumably that's the sort of thing you're looking for.

Just a reminder that general-coverage shortwave receivers make
reasonable WWV boxes. They may not have as much front-end filtering
as a dedicated receiver, but they work fine. Surely the cheapest
ones are <<$350.

Also, for occultation timings, you probably don't need much better
than 0.1 second accuracy. One alternative to recording WWV itself,
in real time, is to record some signal from a clock that you carefully
set before the session. Since you mention kits in the posting,
you might consider cobbling together a time base and a microcontroller
that outputs audio-time in some reasonable format.

>820. I want to run it from the car, the manual says there is an option
>I could buy, but there is also a diagram for wiring a new power plug.

You need the DC module built on to the rear of the rig, about 4'' by
4'', extending about 2'' out from the center of the back of the rig. If
you do not have the module, your wiring will not work. The plug is
wired in a different way to access the DC module when installed in the
rig.

>My question is, has anyone wired a new power plug without using the
>DC-DC option? Anyone know of where I can buy the CW filter for this
>rig?

Can't wire the plug and expect it to work without the option. I have
the wiring diagram somewhere, many ham stores can find the DC module
used for you, or you can build one (not too hard....it seems.)
CW filters are still around, and still made by IRCI, they advertise
in QST...look up "International Radio and Computer" in the advertisers
index.

The point is that the coils were designed to have slightly too much
inductance when they had not been spread. They were designed so the
adjustment would be to reduce their inductance.

Had they been designed with slightly too little inductance, one
would of had to add turns.

Since it is easier to adjust if you know which direction you will
be adjusting, it is easier to make it too much, and tweak the coils
apart to the correct point.

From: wa2sff@arch4.ho.att.com
Message-ID: <CtMMr3.8G1@nntpa.cb.att.com>
Source record: 262692

The 73 article also said:

"I noticed that the factory-wired unit's output inductor L2 and filter inductor L4 had a much wider spacing than called for in the kit instructions. The manual does not specify any adjustments to the spacing of these coils after assembly. But when I spread the turns on the kit unit to match the factory's unit and retuned the final capacitor, power output increased dramatically."

Now I get it. If I want to build a RAMSEY kit and make it work, I just need to also buy a wired unit and copy the wired one exactly. Too bad if the kit instructions do not tell you everything to do, the beginner ham can just send it back and pay a large fee to RAMSEY to repair it.

Proposed AD:

Have the fun of building a kit:

cost of kit $X + $50 to get it working

or buy it wired for $X +$30.

RAMSEY markets their kits as easy to build.
Sure, if you have a spectrum analysiser, signal generator, bird watt meter, lots of time and lots of RF experience you too can get it working

OR

you can design your own from scratch with less frustration.

Has anyone every built a kit and had it work?

Every review I have read about their kits indicated something was wrong and had to be fixed.

!!! HAM RADIO AND TUBE STUFF NEEDED !!!

1. I am in search of the following item: 7N7 locking octal vacuum tube for a 1946 era television. This request is a relay for another ham who does not have Internet access.

If you have one, please contact me. See contact points below.

2. The Tufts University Amateur Radio Club, W1KN, Medford, Mass. is in the process of putting together a digital communications network. Their ultimate goal is to permit someone who connects to be able to jump out to anywhere else - say, to Canada, or Chicago - wherever! They also plan to interface the network to the Internet!

In order for this to work, equipment is needed. Their cash has been depleted, so any equipment they do get is via donations. Also, since their cash is gone, none of it is insured. If they get a lightning blow, and it all goes down, or if anything is stolen or fails, it's down.

On behalf of their club (I am assisting), I am asking for donations of ANYTHING you can offer - radios, coax, connectors, cash for equipment and/or insurance for the equipment, computers, TNCs, you name it.

If you can help with any of the above, please let me know.

I can be contacted via any of the following means:

Internet: wy1z@neu.edu

Phone: 617-373-4198 (Northeastern Univ. Amateur Radio Club, W1KBN)

U.S. Mail: Scott Ehrlich, c/o NUARC, 503 Hayden, 360 Huntington Ave, Boston, MA. 02115, USA

Again, any help with either or both of the above items would be GREATLY appreciated!

Thanks much!

Scott

Joe, Here's a quote from a previous followup posting by John Ramsey:

"Tue, 26 Jul 1994 17:00:34 rec.radio.amateur.misc Thread 377 of 432
Article 35821 Re: Ramsey SlyFox Respno 1 of 6
jramsey@delphi.com Delphi (info@delphi.com email, 800-695-4005 voice)

The manual clearly states to spread the coils for max power output. We
purposely have the coils wound with a 'tad' too much inductance...
73, John"

Looks as if the guy who wrote the article in 73 didn't bother
to read the manual just like you didn't bother to read the followups.

>Too bad if the kit instructions do not tell you everything to do, the
>beginner ham can just send it back and pay a large fee to RAMSEY to
>repair it.

Too bad you don't know what you are talking about. You could have at
least read the followups before you turned on the flame.

>you can design your own from scratch with less frustration.

Maybe you can, but I'm a digital guy myself. I have built one FTR-146,
two FX-146's, and one FX-440... all work fine.

>Has anyone every built a kit and had it work?
>Joe Wilkes >WA2SFF

I personally know of hundreds on the air and working fine. I wrote an
article for 73 a couple of years ago about adding EPROMs for frequency
control. I have had contact with hundreds of satisfied Ramsey customers.
The only unhappy ones blew up their transceiver by performing some
stupid action like spreading the coils with a metal screwdriver while
transmitting.

>by a blank area where you would put in your zip code. So, while waiting for
>your real license, you had an interim license of something like KKCB90032 as
>your callsign.

Actually the zip code calls had three letters -- the K, the first initial of your first name, and the first initial of your last name. The ones with four letters were FCC assigned, and came when it was clear that they were about to run out of three-letter prefixes. (The very first CB calls started with a NUMBER signifying the CB region -- similar to districts in ham calls, but not the same numbers -- a letter indicating what year the license was issued, and four digits. This was changed in the early 1960s when someone informed the FCC that the numbers-first calls did not meet the Radio Regulations of the International Telecommunications Union because they did not begin with a prefix assigned to the United States.)

Some of the other fixed and mobile services use similar calls with a different length -- police and fire radio systems usually have three letters (starting with
K) and THREE digits, while Instructional Television Fixed Service microwave systems have three-by-three calls starting with W. Satellite uplink stations used to have two-by-two calls (ESPN's uplink is WQ35), though the FCC isn't requiring them any more; TV stations' studio-to-transmitter links usually have three-by-two calls beginning with a K.

The most common would be the Alford slot antenna. That's just a waveguide
or rigid coax with rows of vertical half wave slots cut in it. This will
produce *horizontal* polarization. If a *round* waveguide is used,
and several rows of slots are used (typically 5), then a good semblence
of an omni-directional horizontally polarized signal can be produced.

Another omni with gain is a dish firing straight up into a cone such
that the signal is reflected off the cone in all directions. This is
like a splatter board (periscope) antenna except instead of a flat
plate a point down cone is used instead. This style antenna is good
in that the feed point is on the ground. The support structure for
the cone can distort the omni pattern, however.

>The line of sight requirements would limit the coverage of microwaves

>
>So, writing as one who has read about microwaves, but never used them
>what are the biggest problems ? Are omnidirectional microwave

>communications above 1.2 Ghz possible ?

As long as the *physical* size of the antennas at both ends are held constant, line-of-sight path loss at VHF, UHF, and microwave all remain the same. However, an antenna that's large compared to a wavelength *will* be directional. The practical limit to "squishing the donut" for an omni antenna is fairly rapidly reached, so antennas that are directional in azimuth as well rapidly become the antennas of choice as the frequency climbs.

On non-line-of-sight paths, microwaves generally experience greater attenuation than UHF and VHF signals. However, forward scatter works somewhat better because the common volume becomes smaller. Microwave also tends to work better via passive reflection from objects. This can allow good "bounce" shots when the direct path is obstructed.

While repeaters at microwave are possible, it isn't trivial to get good performance. It's probably best to operate in hub and spoke fashion instead, with directional antennas at the user locations making up the majority of the gain while having a modest omni gain antenna at the hub. To work well, this requires a different protocol than the CSMA used at VHF because most user stations *won't* be able to hear each other. A token ring or slotted approach works better by giving positive control to station access. Glenn Elmore has been implementing such a system called the Hubmaster.

Go ahead and laugh...so it HAS tubes.

I'm looking for an ARC-5 series receiver, mainly as a tinkering device.
I fondly remember these from my station when I was a Novice (far too long
ago to comtemplate) and have gotten the nostalgia bug once again.

If you have a complete system (xmtrs, receivers and the rack) that would be
too much to hope for, but shipping could be a problem. i'm in the Boston
area, and would like to pick up if possible.
Failing that, anybody got an old military-style receiver they want to sell?
I know about Fair Radio, but their prices are exorbitant, and frankly I can't
afford to drop a couple of hundred on something that doesn't work.

Thanks, and pardon the nostalgia - Al Richer - alan_richer@crd.lotus.com

Or, it could be that amateurs have licenses and therefore cannot hide
behind anonymous "handles" and therefore feel more responsible for their
behavior. This is the same thing one sees in comparing small towns where
everyone knows everyone else and big cities where people can remain
anonymous. The only difference between the 1950s and the 1990s is that
there is a whole lot more people, and more of them live in big cities.

Is anyone using Slackware Professional/Linux on a PC and running a packet station?
I am contemplating getting Slackware Pro on CD-ROM and having a choice of operating system(MS-DOS or Linux) on bootup to make use of some Unix capabilities for access to the internet via SLIP or PPP and would like to explore using it with my packet station.
Thank you. de KJ5YN

I don't have any experience with RAMSEY kits, so I have no comments on this particular case. However I do have some experience from the other side of the fence.

I used to sell kits for Slow Scan TV. It was very easy to assemble. Not Heathkit style instructions but pretty explicit. The parts checklist was sorted by physical location. Descriptions of the parts were included. e.g. R17 - 47k (yellow violet orange gold)

When ever orientation was important (e.g. diodes), it was very explict in CAPITAL LETTERS. The PC board has a silk screen with all part locations. You get the idea.

Most kits went together and worked perfectly. But there are a few people who shouldn't be allowed near a soldering iron. Several kits came back to me in pretty bad shape: components in the wrong places, huge solder bridges, and damaged components. In general the people were very irate and blamed me instead of their inability to RTFM and solder properly.

(Remember, this is not a flame on Joe. I don't know whether the RAMSEY instructions are adequate or not. I'm just telling you about my own unpleasant experience in selling kits.)

I have a rather uncommon philosophy toward business:

Customer satisfaction should ALWAYS be the top priority.

In all cases I repaired the boards, or replaced them with brand new assembled and tested ones at NO CHARGE. I gave up selling kits. Now, I only sell the product assembled and tested. A very common complaint is lack of audio output. The solution: adjust the audio output level pot as described in the manual!!

>had a CB license and a little CB base station. I remember at that
>time that I had a CB license, but I don't remember if they were
>actually *required* or not.

Yes, they were required and actually ENFORCED. I once had to make a
"monetary forfeiture" - not a fine, mind you - for "failure to
identify". The rules were something like 1 minute on, 5 minutes off,
or vice-versa, and you had to ID at the beginning and end. CB was (is?) a
mixed BUSINESS and PERSONAL use band and everybody had to share nice.
(Had this argument once with a CB STORE OWNER, who insisted CB was
not for commercial use. But, I digress...)

The only reason they got me was because I DID identify, but (purportedly)
not within the limits of the FCC rules. I was "advised", BTW, that
there was no recourse; FCC says pay-up, or get off the air. Needless to say,
in light of grosser violations of the rules going on in my own neighborhood,
I got bent and named names. I had to flee to ham radio; I'm a CB refugee. :{)

The band was actually decent in the mid- to late-sixties. The truckers
deregulated CB during the gas "crisis", and it got completely out of
control when "First Mama" (Betty Ford) proposed the No-Sanity License.
It was already a no-brainer; fill in form, send $4.

I've worked under my father's license (family was included) KBQ0811,
my own KLI6534 ("You got that one DOOOOOONESBURY"), and even had
a club license for Jersey Meadowlands Radio, an emergency monitoring
group, KATH2996(?).

I had some good times on CB, met some decent folks, and learned enough
about radio to stir my interest in Amateur Radio. When CB was good, it
was very, very good. (I think you'll find most of the type of people
I remember from CB up on GMRS now, if not in the ham bands.) But, IMO,
CB now is living proof of what happens when you get something for nothing
and nobody's minding the store.

: I am looking for the frequencies of South Bay area BBS in the 440Mhz range. I am also looking for ANY phone numbers of any
: BBSs (land line variety...though so much the better if ham radio related) in the 415 area code.

I can't think of a better bbs (and packet/internet gateway) than the
N0ARY bbs in Sunnyvale. Their landline number is 408-749-1950. I continue
to use it as my home bbs on packet even though I live in Portland, Oregon.
The remote access via Internet is great.

Here's some relevant info:

N0ARY/BBS Internet Gateway Operating Instructions
August 7, 1992

LOCAL USERS:

Local users are those that log into the bbs via the bbs's
telephone modem port (408-749-1950) or via one of the 3 tnc
ports (144.93, 223.62, 433.37). Each local user has a bbs
account that is used to customize how the bbs interacts with
the user.

Local users can set their account up so that all incoming mail
addressed to their call will be forwarded via a gateway to internet
and on to other networks (mcimail, compuserve, etc). All the user
needs to do is enter his email address and turn the feature on.

.....

If you are interested in using the N0ARY packet/internet gateway; or if
you simply want to access his bbs remotely via internet, here are the proper
addresses:

gateway_info@arasmith.com
will automatically send you gateway instructions. These are about
10Kb and tell you how to operate the gateway from both directions.

>Mike, KK6GM

NO, NO, NO! He got it all wrong. The FCC has determined that television
is a hopelessly inefficient means of rotting the brains of the American
people. By the year 2008, ALL TV is to be phased out, to be replaced
by the new INFORMATION HIGHWAY. Operation is intended to be quite
simple:

Step 1: Insert your head in a microwave oven.

Step 2: Turn it on.

1581. Digital Spectrum Offer!

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-28 16:12:30 UTC
From: brunelli_pc@delphi.com
Message-ID: <5kxSjs2.brunelli_pc@delphi.com>
Source record: 262669

After reading many posts regarding the unfairness of
the code requirement and the elitism of CW ops, and
superiority of one mode over another, I suggest an
alternative.

First:
A) It is a given that the ARRL will not support ths and
i honestly hope that i am wrong.

B) An influx of new hams is taking place and many of these
operators are interested in digital modes.

C) The future of amateur radio is getting licensed now.

with that said, here 'tis.

The usenet r.r.a.?? newsgroups constitute a watershed of
hams with a de-facto interest in digital communications
and radio-theory. The opinion of these participants vary
widely (as evidenced by the constant bickering!). These
factors combine to provide a forum for the development
of a proposal for the modifications of the current state
of HF spectrum management.

Proposed Alterations:

1) Novice Priv's to include digital-specific allocations, for
example: 7075-7100; 14075-14100; similar allocations on one
or more WARC bands.

2) Generation of an additional written exam, specific
to the theory, implementation, and practice of digital modes.
Coverage of data types, data rates, modulation techniques,
bandwidth, hardware, on-air protocols, Propagation, RFI. and
FCC regulations is expected.

I believe that the resulting impact would be to avail a large
number of hams of spectrum prioritized for digital modes. This
would be in keeping with the "technology infusion" theme of the
no-code. No-code Techs are REAL hams with strengths that have
nothing to do with triodes and air-variables.

WARNING! Flame Bait Ahead....

Q. How valid is a technology that is undergoing a spare-parts shortage?

ASIC's and microprocessors are cheap, reliable, versatile, and were
developed to REPLACE tubes, crystals, hartley oscillators, and

the like. Forcing 75 year old technology to be the yardstick for amateur radio places the future of the hobby in jeopardy.

Ahem....

If the energy of the Usenet participants was directed to change, the potential exists for a shift forward in the status of Ham Radio.

Any Takers???

Hi, everybody. After years of HF DXing and contesting, I decided to expand my horizons and get a 6M rig, to work lots of sporadic-E. I picked up a used Yaesu 625-RD and got a 3-el beam up at 40 feel with 9913 feedline.

I haven't heard a thing.

I know that it takers some luck and effort for the MUF to hit 50 MHz right now, but I'm wondering if the band has just been REALLY DEAD, or if I've blown my installation somehow. Maybe I have a sick rig. All I know is that I'm in EN50, and I haven`t heard anything from the southeast at all... a path I was told to be fairly reliable.

Am I just being too impatient, or what? There's nothing like getting a new piece of equipment and not hearing anything. If you've got any info for a 6M neophyte, I'd be grateful. 73 de Sean KF9PL Urbana, IL

73 TU SU DE NA4G BOB AR

Greetings CWISTS, Boatanchorites, Fellow Hams, et al:

I will be on again at 0400UTC for the continuing saga of the Sacred and
Most Honorable Friendly Society of Brass Pounding Fist Functioning CWISTS.

Last Friday Night, there were only a few folks that showed up, probably
because of the summertime blues and committments elsewhere. The 80 meter
QRG was quite good, but a bit noisy with the eastern US storms about.
I did not hear anyone on 40 meters (someone scout out a good 40 meter
QRG in the novice band).

There has been a lot of interest on the rec.amateur.radio newsgroups
on sending CW and the general poor quality of many fists these days.
Let us do a little to promote, not only the art of receiving CW
radiotelegraphic communication, but also the art of ...sending... good
CW radiotelegraphic communication. It is perfectly fine to have an
individualized fist, and it is often easy to tell who is aboard on watch

at the key, just by the first few characters received, but it ...should... be a point of pride and operating skill to be able to manually send characters of sufficient integrity as to be readily received by all who might be in a position to hear same.

So, let us all see who will be on watch this coming friday night (saturday morn 0400UTC). Run your treasured boatanchor if you can, or even that newfangled rice box supreme, or even that fine homebrew QRP rig.

The general information is:

```
++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
+ CWISTS Friday Night Fist Function +
++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
+ +
+ Standard time: Friday Nights at 0400UTC (Saturday morning) +
+ +
+ Standard freq: 80 meters --- 3702.5 khz for all hands. +
+ 40 meters --- 7102.5 khz alternate, for all hands +
+ (between the heterodynes) +
+ (someone scout out a better QRG) +
+ ___ +
+ Standard calling signal: CWIST IMI DE <yourcall> K +
+ +
++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
```

Let us all work together to continue to advance and promote the friendly use of CW on the amateur radio bands.

Let us continue to assist and help the newcomers and slowspeeds who are trying to get their CW going.

Let us to continue to promote the use of whatever gear you have up and available, be it the newest of sorts or the oldest boatanchor. Remember, CW generation has not changed since the days of arcs, Alexanderson alternators, and Pliotrons.

Let us continue to promote the sharing and fellowship of the history and traditions of amateur radio (this includes all you OTs out there that have all sorts of goodly tidbits of history to relate to the young squirts on the block, and it includes all you young squirts on the block who, even though a bit new at CW and radio are the future of the service or hobby or profession).

Let us continue to promote the ``elmering'' of all of our new folks by the old timers aboard, in any way that we can. We should not be out to convert the brethren to CW, but should be there to elmer them and assist them in learning/practicing their skills, if possible.

So, OTs aboard, young squirts in the wings, high-speed afficionados of the art, and slow-speed ragchewers, join in on the fun. If your equipment is old boatanchor, so what. If your signal is a bit weak or chirpy, so what. If your antenna is just a mere piece of wire up into

the trees, so what. YOU can still join in and participate.
YOU are the folks who will make it what it can be, a goodly learning
time and an enjoyable evening for all.

See You There OM/YL.....

I own a 1985 Golf GTi and I've had a terrible time trying to find a spot
on the car to mount an antenna for 2-meters. I'm currently using a
Larsen mag-mount, but I'm getting tired of putting it on and taking it off.
Also, I don't want to drill any holes!!!

I had originally thought that I could use a trunk-lip mount along the
top edge of the hatch. However, the hatch is hinged in such a way that
this isn't possible. Even if you could get the mount on there, you'd
never be able to open the hatch again.

Next, I thought about putting a through-glass antenna on the rear window,
but the defroster wires cover most of that, and there's the rear wiper
to think about. I suppose I could use a spot in a lower corner of the
window, but I don't like the idea of subjecting my rear-seat passengers
to RF, not to mention the performance trade-offs.

So, how have you other Golf and GTi owners solved this dilemma?
Let me know what type of antenna (make, model) and where you mounted it.
Email and I'll summarize.

Thanks,
Andy

Hi all,
I have been reading the notes within the info-hams digest as posted on Genie, and though of saying good day to all of you.

I am a ham living in Brussels, Belgium, working for the European Commission. I hold calls from the US (KC1QF), Ireland (EI4GV), Greece (SV0GV) and Belgium (ON9CGV). I am pretty active in supporting ham radio here and liaise with the ARRL often enough via e-mail. For those that are interested to what I look like, see Up front in QST July 91, Feb 94 and upcoming Nov 94.

Now onto the business of replying to some of the questions I have seen in info-hams.

>> 1750 HZ tone in Europe.
Today, there is no reason on the use of this tone and in fact, although it is a legal requirement, most repeaters owners are starting to ignore it. It was there to trigger a repeater upon demand by hams, so that others without the 1750Hz tone could not accidentally fire repeaters. In many countries in Europe (Belgium, The Netherlands, UK) you can just whistle in the mike to turn it on. In Greece, Ireland and Italy, you either dont need it, or you can use a CTCSS of 88.4 to activate it. In addition, as we have less frequency available (when will the IARU start doing something about this and ensure the world has the same ham radio allocations?) we also have less repeater frequencies in channelized areas. R0 to R7 (145.600 to 145.775 every 25KHz) and in some areas, R8 to R15 (145.612.5 to 145.787.5 every 25KHz). Thats it. So you can imagine we have run out of places for 2 meter repeaters.

>> Expanding amateur radio in Europe. Lets face it. For those that dont know, amateur radio in Europe will get nowhere as it is. The national authorities, and I have met many of them, just think we are a bunch of enthusiasts who just use radio to pass the time and provide no useful service. Yes this is true. We cant provide any useful service because we are not allowed to. Noone can go to the Telecom authorities and say 'I want more frequency because...' after the 'because' there is nothing to put in. There is no third party, thus we cant help anyone. Therefore we cant go and say, as US hams so succesfully do, we are ready to provide community service, or to do whatever we can for our neighbors. They will tell, as they have done, thank you but remember you are not allowed.

I find it hard to believe that in this day and age, third party is such a forbidden word, in mainland Europe when Bosnia concludes third party agreements with the US in a jiffy (if anyone knows how that was done please tell me).

The fact is that for the radio amateur service to grow, three things must be done here:
- Help us help the communities
- Establish a volunteer identity for us (Europeans by nature dont volunteer much)
- Realize we can do much more that you give us credit

Lets get the IARU societies, the ones we give lost of money to receive a black and white magazine every month (about $50 / year)(with the only pictures in color being ads), to push the authorities to
1/expand out frequency bands (get 146-148 as secondary), get 6900 to 7100 and more;
2/ allow us to help the governments by providing public communications service (and thereby saving the governments money - saving is the important word here) and
3/ get young children into ham radio more and more by setting up stations with boy scouts, in public places and more.

As far as I am concerned, I am a VE and hold test sessions every three months here under the US system. I liaise with boyscouts and try to spread the ham radio word as much as I can.

If you are still with me, and you have any questions, on operating in Europe, licenses, rules, why is the TS50S such a great radio, etc, I will gladly help.

Thanks,
Peter Panayotis Vekinis, KC1QF

PS To the Editor: Is there a way to receive info-hams without going to Genie, perhaps sent to my email address? We dont have full access to Internet yet here. Tnx

Sounds a bargain. I have never seen the Heathkit unit here.
Anybody know of anything like this for sale in the UK please?
(Either DCF77 or MSF but *not* the Cambridge Kits job.)

1594. Re: REQUEST: Help finding WWV receiver!

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-28 18:29:36 UTC
From: Mike VandeBunt <Mike.VandeBunt@mixcom.mixcom.com>
Message-ID: <1994Jul28.182936.26973@mixcom.mixcom.com>
Source record: 262616
Cross-posted to: sci.astro,sci.electronics,rec.radio.amateur.misc,rec.radio.shortwave

Almost any SWL (shortwave) receiver will pick up WWV. There are a lot of shortwave sets available for under $100. which are pretty poor performers for SWL listening, but which will work quite well for WWV/WWVH.

Probably the easiest one to locate is sold by DAK. It's audio performance is poor and it's weak-signal sensitivity is abysmal, but it gets excellent reception of WWV. (Remember that WWV transmits on 4 or 5 frequencies which each work better at fidderent times of the day.)

1596. Timewave DSP9+ review

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-28 18:47:42 UTC
From: Tom WB7ASR <tom_boza@ccm.hf.intel.com>
Message-ID: <318upn$9t5@chnews.intel.com>
Source record: 262598
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.digital.misc,rec.ham-radio.misc

I purchased a used Timewave DSP9+ at the Flagstaff, Arizona hamfest for $125 last weekend. Its a 16-bit A/D audio filter, with a 2 watt audio AF amplifier. It does work like the book says, however there are several quirks.

1) When using it to receive 6KHz wide AM short-wave broadcast stations, it narrows the audio pass band down to 3Khz. This makes the audio sound tiny. With the filter in line, 3Khz is the max wide pass band it will produce. However it does a "GREAT" job in eliminating heterodynes, and I mean GREAT !!!

2) When in the 100 Hz CW mode, it has ringing. I was real surprised to hear ringing with a DSP filter. It make the 100 Hz mode useless.

All-in-all, its a good filter for CW and DATA.

Above comments are my own.

: As long as the *physical* size of the antennas at both ends are held
: constant, line-of-sight path loss at VHF, UHF, and microwave all remain
: the same.

This is not correct.

If physical size at *both* ends of an LOS (freespace) link is maintained, signals get *stronger* as you increase frequency, transmitter power held constant, at a rate of 20*log(f2/f1). This is because the rx aperture is constant and intercepts a constant area while the ERP increases due to the tx antenna gain increasing in proportion to the antenna area expressed in wavelength^2.

If interested in details and drawings, see my 9th ARRL CNC paper available by anonymous FTP from col.hp.com under ~hamradio/packet/n6gn/arrlcnc/cnc9a.ps

Dennis Rice (drice@crl.com) wrote:

> Yeah, NiCads usually run a little bit lower voltage than their
> alkaline counterparts.

The nominal voltage of a single NiCd cell, fully charged, is generally assumed to be about 1.2 V (as compared to 1.5 V for carbon-zinc or alkalines). A "9V" battery might contain seven (total 8.4 V) or eight (total 9.6 V) of these cells, but you won't hit exactly 9V at full charge.

Does anyone have any experience with the glass mount amateur antennas that are available. I live in the ground floor of an apartment building and can't put an antenna outside, so I am thinking about putting a glass mount on my window. Any help would be appreciated.

Thanks in advance,

Warren Whitby

1603. 15mW QSO's

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-28 20:17:17 UTC
From: davidc@lsid.hp.com
Message-ID: <Cto30u.2uC@hpcvsnz.cv.hp.com>
Source record: 262638

I was just reading the write up for the ICOM IC-T21A and IC-T41A HT's in the August QST ICOM advertisement. I quote from the ad:

"Auto Low Power Function - Automatically
selects 15mW just before battery exaustion
so you can complete your QSO."

Hmmm! How many situations have I been in where my battery is about to go and I am close enough to the receiving antenna on the other end that 15mW of power will do the job. Am I missing something here? 150mW I could maybe start to believe.

1604. Icom R100 super coverage receiver for sale

Hello.

I have an Icom IC-R100 full coverage scanning receiver for sale.
It has full, unrestricted frequency coverage from .1-1856mHz.
It can be used as base or mobile.
It has the original box, manual, mobile mounting bracket, antenna
s, and power cord for your car.

If you can find them, these radios sell for over $650.

Contact me if you would like to buy the R100.

Thanks.

In article <318ube$rs7@pandora.sdsu.edu> palsson@ucssun1.sdsu.edu (Jerry Palsson) writes:
>I'm looking for a workable replacement for the rubber belts used
>in the Heathkit HW100/HW101 rigs. A number of ideas come to mind, but
>I'd like to hear of practical solutions that hold up. (The belts
>supplied by Heath just don't last very long.)

The HW-101 I had a couple years ago suffered from reduced output on some parts of some bands which I tracked town to improper tracking of the two DRIVER/PRESELECTOR variable capacitors. It needed new rubber drive belts and at that time I had no idea where to get them. A local electronics store had some generic replacement belts for various equipment (VCRs, turntables, etc.) but they wanted something like $15.00 each for ones that were pretty close and they would have had to special order it. There was no guarantee that they would even work. There had to be a better way.

So instead I "re-strung" the pulleys that drive the two variable caps with regular old dial cord and little springs -- just like an old radio dial. It took a while how to figure out how to do it (don't ask me to go into details) but once I got the first one the second one was not too bad. Anyway it gave the DRIVER/PRESELCTOR a really nice positive, firm feel and increased the power output considerably due to the improved tracking. This solution may not be for everyone but it worked very nicely for me.

Then... about 6-9 months later I discovered that my favorite local hardware store had a real nice selection of rubber O rings. Some looked pretty close to the HW-101 drive belts but I did not measure them. I am sure one of them would have worked. Check your hardware store. They just might have one. Also, recently my local Pep Boys added a large O ring display. They had lots of big ones. I think they were generally priced less than about $2.00 each. Go figure.

1606. Extended Transceive For FT-470

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-28 21:26:44 UTC
From: hess@boi.hp.com
Message-ID: <Cto68L.KL6@boi.hp.com>
Source record: 262644

Yes, I have done it. I have three (3) 470, for use by my licensed wife and my licensed self. To accomplish this mod, you need a *GOOD* soldering iron, and possibly a microscope (a magnifying glass is a must).

After opening the radio, the simplest thing to do is to scrape off the "white goo" (RTV silicon of some kind), and unsolder the Lithium battery. There are three legs on the battery, and you must unsolder at least two of the legs to be able to swing the battery up out of the way.

This is why you want a good soldering iron. The pads on the PC board are SMALL! It is easy to damage them with an iron that has too much in the way of wattage. The bes rule of thumb I can offer is that if the soldering iron didn't cost at least $50.00 (and preferably $100.00), don't use it.

Using a *SINGLE STRAND* of copper wire from some stranded 18 guage speaker wire (yes, thin as a human hair) bridge the appropriate pads. The pads lie directly under the edge of the battery, at the (I remeber, but could be wrong) 2 o'clock, not 10 o'clock position.

Re-solder the battery, and close up the radio. The pads are so small that a 10 power microscope is helpful (my wife has one, bless her), and a magnifying glass is a must.

Optionally, consider the alternative method of running the radio in expanded mode by holding down the up and down arrowswhile turning it on (resetting it).

Best of luck

-Kevin

Dave,
You may want to look at the current issue of QST and the AEA closeout specials
for the filters (AM and CW).

OK: I was a Unix nut when Ham Radio decided to start ASCII transmissions,but I'm confused. What is a Call Sign Server and how do I access one. I will assume it a Unix Workstation that allows me to Look up Call signs and it's on the internet, but how do I get to it.

While I got your attention I need to renew my license (damn ten years is up already). What is the best way to get a 610 now a days. I have been inactive for awhile, but with my ex-xyl gone I"MMMMMM BACKKK. I hear talk about a new no code tech license. What will happen to my old tech license I got back in 1979 when I renew? I like my call sign and don't want to lose it.

OH yes anyone know where I can get a microphone for my IC-290-A in the State of New Jersey. I'd like one with the Touch Tone Pad.

>have a sick rig. All I know is that I'm in EN50, and I haven`t
>heard anything from the southeast at all... a path I was told
>to be fairly reliable.

I'm also new at 6m and have had two lucky opportunities, both
during contest weekends. The first was field day and I worked t
transcontinental (NJ to CA) on 6m as well as several midwestern
stations.

Then on the JUNE CQ VHF WPX contest the band opened like crazy again
and I made contacts all over the midwest, Texas, Colorado, Nevada
Florida, etc. M

My station on on both days was a 3 element beam with a Kenwood
TS-690 (50 watts on 6m SSB). On the CQ WPX contest my
beam was set up on a pole on my deck and doesn't even clear the
trees.

But, as you've noticed, many other times the band is dead...but
I think that's more because the band is under utilized. 6m
should be great for much short distance QSO, rag chews, etc.
and if more of that went on all the time, I think we'd know of more
frequent band openings.

Good luck,

Standard Disclaimer- Any opinions, etc. are mine and NOT my employer's.

Source record: 262715

Hi Smitty,

thanks for your words.

Japan, Australia and New Zealand are different worlds entirely.
New Zealand is pretty much like Europe in its ham radio system.
Australia is all together different for two main reasons: 1/ radio is used an the only communications medium with the outback (you must have heard of flying doctors) and 2/ there is third party in Australia. Ham radio is the only way to communicate and is being used more and more today. Schools run of HF like you wouldnt believe. In terms of ham radio freedom, Australia is just as good as the US.
Japan on the other hand has various licenses and opens up HF to many more people that in the US with reduced power. Every rig you get today, say the Kenwood, is also supplied in a R version, thus there is a Kenwood TS450S and a TS450R, the R stands for reduced and means 10 watts output. Most people get 10 watt licenses easily. This eases the problem on 2 meters and other starting frequencies. There is no 3rd party with Japan (I dont know if there 3rd party allowed within Japan).

Most of the European goverment consider us as trouble makers and a service they are not interested in. It provides no real income and has no real purpose (does a hobby denote purpose?).
Then a lot of hams are scared stiff about doing anything about it. They dont have anything to bargain with. They dont raise their voice. They are generally afraid. Thus we are always at the mercy of the authorities. Then there are those that think we are closely monitored (In Belgium they closed down the monitoring service years ago for luck of funds) and they are afraid someone will come in their houses at night and confiscate their equipment.

I mean think about this: Maximum power in Europe is about 750W PEP out (In Germany), 400W PEP out (UK), 150WDC in (Belgium, Irl, Greece) so how can you say you are using a 8877 amp? You dont say it. You say, "I am putting out about 150watts...' I even know an inspector of the communications department (like the FCC) who operates on 160m at 1500 W out when the maximum permitted is 10 W DC in. 'Cant do it otherwise' he says.

You can see there is much disparity and there is much that needs to be done. The IARU societies must get their act together and start a constructive negotiating process with the Communications departments towards achieving a uniform ham radio system; a real easy entry for starting hams and make the hobby open to all. Instead of wasting their time about sponsoring yet another contest which serves no practical purpose whatsoever.
Best,
Peter

Peter,

Thanks for the imformative post in rec.readio.amateur.misc.

I was not aware of the problems with European Ham radio that you mentioned.

What about Japan, Austraila and New Zealand? Do they have the same problem?

It would be interesting to know what the Governments of the major countries in the World think about the Ham radio activity in their country.

Regards,

Smitty, NA5K

SENEGAL. Jean-Louis, 6W6JX, is very active on 40, 30, 20 and 15 meters between 0630 and 0930z, and again from 1630 to 1900z. QSL via CBA.

EASTERN MALAYSIA. Dave, 9M8BT, has been heard on 14220 and 14226 kHz operating free style between 1315 and 1500z. QSL via N5FTR.

ANGOLA. Rich, D2/AA4HU, was on the 14226 DX Net around 2245z.

BANGLADESH. Erik, S21ZG, was recently heard calling CQ on 14006 kHz at 0108z with very few takers.

BRUNEI. V85KX was very active on 14025 kHz between 1230 and 1430z. QSL via G3JKX.

MAYOTTE. Elio, FH5CB, is on almost daily. Check 14256 kHz between 0400 and 0500z. QSL via FH8CB.

FIJI. A group of Japanese operators from the Shizuoka DX Group will man three stations and be active July 29 through August 2, including operating the IOTA Contest. Listen for JA2JW as 3D2YH, JA2AUP as 3D2AS, JA2BDR as 3D2DR, JA2DPC as 3D2PC, and JA2SWH as 3D2GS. QSL via their home calls.

REUNION. Jacques, FR5ZU, has been very active on RTTY and has even shown up on SSB recently. Check Zedan's Net on 14250 kHz and a list operation on 14243 kHz. He will leave at the end of the month, so work him while you still can. QSL via VE2NW, 1993 or later CBA.

FAROE ISLANDS. OY1R was heard on CW between 14040 and 14050 kHz from 1245 to 1545z. QSL via W2KF. OY1HJ was on SSB at 14258 kHz around 1515z. QSL via OY6FRA.

SINGAPORE. Michael, 9V1ZP, phoned the DXCC Desk on Friday to announce that 9V1 stations will be signing S61 plus their regular suffix for one month starting August 13, 1994. This is in celebration of the 25th anniversary of IARU member-society SARTS, the Singapore Amateur Radio Transmitting Society.

THIS WEEKEND ON THE RADIO. The Connecticut QSO Party, sponsored by the Candlewood ARA, runs from 2000z July 30 to 2400z July 31. There is a rest period from 0400z to 1200z. CT stations will exchange signal report and county. All others exchange signal report and either ARRL Section, Canadian province or DXCC country as appropriate. CARA club station W1QI and ARRL HQ station W1AW will be on the air and count for bonus points. See pages 118 and 119 in June QST for more information.

The IOTA or Islands On The Air Contest, sponsored by the RSGB, starts at 1200z July 30 and ends at 1200z July 31. Exchange signal report, serial number and IOTA number if applicable. Check June QST, page 119, for complete rules.

The Russian DX/International Goodwill Games 94 Contest, sponsored by the Union of Radio Amateurs of Russia, is from 2100z July 28 to 0900z July 30. Russian stations will exchange signal report and Oblast number. All others exchange signal report and serial number. Details appear on page 126 of July QST. Special event stations R1GWG, for Good Will Games, and R1MVI, for M-V Island, will be active during the contest.

>
>Does anyone know how or have specs on converting a USB/LSB CB to a 10M
>radio?
Back in the late 70's -early 80's, when there were sunspots
(remember sunspots? :{(), these conversions were quite The Thing.
There were variations in the designs back then, and you could
actually see the parts. ;{) Several of the CB (yes, they had them) and
ham magazines ran conversion articles for quite a few of the "new"
sysntehsized CB rigs. One magazine (CQ? 73?) ran a whole series, by name
and model number. They also included the store-brand versions of
these radios. I had a JC Penney SSB rig that was a Midland in disguise,
and sold it to someone who wanted it to do the mods.

Seek out a library, a club, or a periodical pack rat who might have
magazines circa Back Then. They may lead you in the right direction.

Mike VandeBunt (Mike.VandeBunt@mixcom.mixcom.com) wrote:
: Almost any SWL (shortwave) receiver will pick up WWV. There are a lot of
: shortwave sets available for under $100. which are pretty poor performers
: for SWL listening, but which will work quite well for WWV/WWVH.
: Probably the easiest one to locate is sold by DAK. It's audio performance
: is poor and it's weak-signal sensitivity is abysmal, but it gets excellent
: reception of WWV. (Remember that WWV transmits on 4 or 5 frequencies which
: each work better at fidderent times of the day.)
The one I usually use for checking out WWV/WWVH is the Radio Shack Realistic
DX-375. I got mine as a Christmas gift, but they retail for around $100.
It has digital readout, and it has a keypad for entering in frequencies.
Also, unlike some inexpensive digital SW radios, it will get 10 MHz. Too,
it has memories, so that you can set your WWV/WWVH frequencies and then get
them with the push of a button. It's no Watkins-Johnsnn, but it's handy
for such purposes, and for hearing stronger stations, too.

High all,

I just started reading this newsgroup, and a lot of the post went over my head - as far as technical stuff goes - I am currently studing for the No-Code Tech license - adn would like to get some info - I would like to get a 2 meter hand-held as my first unit - I heard that the Radio Shack has a nice one that isn't too expensive - anyone have that one? If not, could anyone recomend a good, relatively inexpensive radio? I am also willing to buy used - so if anyone has - please don't hesitate to reply...thanx in advance

Please don't be pised off with this post - you prolly get stuff like this a lot - but I'm new to ham - and want some help - thanx in advance...

- Joseph Herman Thought is useless unless accompanied by action-
- herman@yu1.yu.edu Action is useless unless preceeded by thought -

Good point. 10 MHz does not fall within any of the international broadcast
bands, and some radios that have skimped as far as possible may not cover it.

BTW, would CHU (Canada, 7.335 MHz) do as well? I often get better
reception of them than of WWV.

USENET friends -- we're seeking your help...

Radio astromomers, both professional and amateur, have been monitoring radio emissions from Jupiter during the recent cometary impacts. Jupiter is a well-studied high-frequency radio source, with a variety of signal types usually around 20-MHz. Many researchers have reported interesting changes in the noise patterns, perhaps related to the Shoemaker-Levy comet fragments and their interactions with the magnetic field of Jupiter and its moon, Io.

Several astronomers have also reported some rather bizarre signals present on the tapes made during the collision of Fragments E, P, and K. After digital signal processing, while listening to the audio on headphones, one can hear through the noise bursts the sound of a human voice. In the hopes that someone on the net will be able to assist in the identification of this signal, I'm posting a transcript of the words that can be made out. Note that unintelligible segments are marked --??--.

BEGIN TEXT 125b

As the --?????--

On a cold and grey Chicago morn
a poor little baby child is born.
In the ghetto.

And his momma cries.

'Cause if there's one thing she don't need
it's another hungry mouth to feed
In the ghetto.

I have a 757gx (the original model, not the Mark II) and I recently bought
the FIF232c control interface that allows it to be controlled by computer.
Unfortunately, none of the programs I have acquired to run it seem to work!
They all seem to be made with later models in mind, the Mark II or later.
If you know of a program that works with the 757gx (preferbly one thatallows
the user to configure the com port) please leave me a message.
My address is : MATTMOORE@DELPHI.COM
Thanks.

Greater than 2 MeV Electron Fluence for 28 JUL is not available.

SYNOPSIS OF ACTIVITY

Solar activity was very low. New Region 7759 (N04E38)
was numbered as a 3 spot BXO beta group.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet to active levels
for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Event probabilities 29 jul-31 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 29 jul-31 jul

A. Middle Latitudes
Active 15/20/10
Minor Storm 25/10/05
Major-Severe Storm 05/05/01

B. High Latitudes
Active 25/20/20
Minor Storm 25/10/10
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
Normal propagation is expected to continue over the next 3
days, with periods of above-normal propagation possible over
most regions as levels of geophysical activity continue to
subside to quiet levels by 31 July.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>on the internet, but how do I get to it.

Callsign server... You hit the nail on the head. Telnet to
callsign.cs.buffalo.edu 2000 (be sure you put that 2000 on the end).
Then you can type in any callsign and get that person's address. Play
with it and have fun. See if you're in there! :)

>While I got your attention I need to renew my license (damn ten years is up
>already). What is the best way to get a 610 now a days. I have been inactive
>for awhile, but with my ex-xyl gone I"MMMMMM BACKKK. I hear talk about a new
>no code tech license. What will happen to my old tech license I got back in
>1979 when I renew? I like my call sign and don't want to lose it.

Hmmm..... When did your license expire? I think the grace period is two
years. If you're within that grace period, you could just renew your
license, and you're a ham again, and you've got the same callsign.

However, if the grace period is over, you'll have to go through the
motions again of testing for a license. Yep, there's a new no-code tech
license. (Well, new as of '91, at least.) Just pass the test for the
Novice written and the Technician written, and you don't have to worry
about the code.

If you're still within the grace period for just renewing your license,
get a 610 form from the FCC at 1270 Fairfield Rd, Gettysburg, PA
17325-7245. Or, if you can find a local VE testing team, they'll have
plenty of form 610's to give out.

If you have to test for a license again, you'll need that VE team. If
you don't know where to find one, the ARRL can give you some help there.
I think the number is 1-800-9-NEW-HAM. If you have to get a new license
and you REALLY want your old call sign, they're about to institute
something new where you can buy a preferred callsign. All the kinks
aren't worked out yet, but you'd be able to pay x dollars and pick a
callsign. You can pick the callsign you used to have.

Whichever route you have to go, good luck to you!

>you've got any info for a 6M neophyte, I'd be grateful. 73 de

Be patient. 6 m is quiet right now but recent past gave me over
100 new grid squares. If you are looking for a busy band, 6 isn't
it. It is patiently waiting and watching and listening for the
openings to occur.

When they do (tropo, Es, Aroura) all hell will break loose. It
will give you a contest adrenalin rush!

I'm running a FT736r (satellite rig) with a 6m module, Mirage
150w brick and a 5el CCraft at 30ft. When the band is open, or an
Aroural opening hits be prepared for a wild carpet ride.

Hey Kevin,
Thanks for your advice, tools and equipment should not be a problem. I simply wanted to perform the mod correctly. I have all the necessarily tools to accomplice the mod correctly. I will be using a nice PACE soldering station, nyleese wire (single strand made exclusivly for jumping), I will also be using a B&L stereo scope. I just want to make sure that I *DONT* need to move or remove any of the resistors.
Also, I thought that removal of the battery would be necessary as well (I was seeking conformation about the battery).
Also, I already know about the MARS mod (holding the arrow keys), However I need the out of band TXmitt (work related completely legal, I have a commercial class ticket).
I'll let you know how it turns out.
Thanks,
MM N0UXT

Oddly enough, CBers had licenses back when this breakdown occured too, but it was socially acceptable *not* to use their callsigns or their real names. The FCC couldn't cope with enforcing the ID rules, or any others after a time. CB had turned into an anonymous mob. We see similar things here on Usenet where anonymous posting services allow people to hide their identities and say things they wouldn't say if required to give their real names.

>This is the same thing one sees in comparing small towns where
>everyone knows everyone else and big cities where people can remain
>anonymous. The only difference between the 1950s and the 1990s is that
>there is a whole lot more people, and more of them live in big cities.

Most big US cities have shrunk in population over the last two decades. While it's popular to demonize the rat warrens in favor of rural and small town life, the real bulk of population growth has occurred in suburbs, not in big cities. What has happened in the big cities is that they've become warehouses for people on welfare, now into the third generation in many cases. These people have been robbed of dignity and self respect by the dole, are usually the product of single parent homes, and sometimes turn to criminal behavior as a way to gain status. Thus we have the youth gangs roaming the inner cities murdering people just for the thrill and *reputation* that it gives them.

Yes, that's a key item. In the US, our amateur service charter (97.1) spells out our purposes. Number one is public service, followed by self-training and experimentation, building a ready pool of operators to draw upon in national emergency (war time), and promoting international goodwill. It's the public service hook that gives us the most support from government today. (At one time it was the trained pool of operators for war time, but that climate has changed. Our current military communications needs have little in common with traditional amateur operating emphasis (Morse).) We have liberal third party rules because our charter says that's our first priority. To get liberalization of your European system, you need to first address your national charters to make sure they give priority to public service. After that, the other rules changes and band expansions can follow naturally and logically. At a time of worldwide telcom liberalization, this is a good time to try to get your third party restrictions lifted.

>This morning I heard a ham state that all VHF TV channels were to be
>reallocated to other services by 2008, with broadcast TV then limited
>to the UHF channels. I heard this on a scanner, so I couldn't ask him
>about it. Does anyone know if this is true?

It's true. The FCC has a plan to move TV to HDTV. The way it's planned
to work is that current licensees on VHF will receive a UHF HDTV channel
and will simulcast programming on both channels from 1996 to 2008. At
the end of this transition period, all VHF operations will cease. The
VHF TV spectrum will then be turned over to the land mobile services.

There have been delays in getting the HDTV standards approved which
may push back the startup date of the transition period, but so far
the Commission intends to hold to this track.

One thing that makes this plan possible is the digital transmission
scheme envisioned for HDTV removes the forbidden channel restrictions
suffered by NTSC transmission. It'll be possible to stack HDTV channels
on adjacent channels in the same community.

>
>Dan (N2ZSH) Age 13

Congratulations Dan! A 1/4-wave groundplane is traditional, but it offers some problems for electrical safety, and for performance. A better choice would be a J-pole made from copper plumbing fittings and pipe. There have been several articles in the ham press, and here, on how to build this simple antenna. It has the advantage of DC continuity, which simplifies mounting and surge suppression, and more gain toward the horizon than a 1/4-wave antenna.

The National Electrical Code says an antenna mast must be grounded with a minimum #8 solid wire going in as straight a line as possible from the mast to a ground connection. The ground should be, at minimum, an 8 foot driven rod. There should be no sharp bends in the ground lead which can present extra impedance to the flow of a lightning induced surge.

If you look back through the archives, you'll find more detailed and elaborate recomendations for station grounding and protection than those set as minimums in the NEC. If you suspect your antenna will be a target for lightning, you should consider taking those additional steps.

You can use a chimney mount, like the one Radio Shack sells, to support a piece of TV mast, also from Radio Shack, that will in turn have the antenna clamped to it's top end. If you build the J-pole, automotive stainless steel hose clamps can hold the antenna to the mast. If you opt for a purchased 1/4-wave groundplane, mounting hardware should be furnished with it. Use good quality coax, avoid Radio Shack for this. Belden 9913 has the lowest loss, but RG-213 is also good. Weatherproof your connections carefully. A proper gas discharge surge suppressor, such as those sold by Polyphaser, should be included in the coax where it enters the house. The suppressor should be connected to the same

ground used for the antenna mast, using the same kind of wiring technique. Don't daisy chain ground connections, run a separate wire to the ground rod.

Have fun!

> this with current microwave components. There are problems with:

Reducing the cell size is the best way to go, if you have a high enough
user density to support this infrastructure. There should be at least a
dozen of hams in each cell (on average) to be able to buy and maintain
the repeater system. This is possible only in densely populated areas.

> 1) Lack of good signal path during casual use due to walls, trees,
> buildings, etc.

Man-made structures are not so much of a problem, as they reflect the
signal quite nicely. A large number of such structures can be modelled
in a similar way as in other scattering propagation modes, i.e. the
power that illuminates the scattering volume is reradiated in all
directions. The scattering modes usually have a path loss that is
proportional to the fourth power of distance (12 dB for each doubling
of distance) , while the line of sight path loss is only proprtional
to the second power of distance (6 dB for each doubling of distance).
If you are used to line of sight path loss calculations (which requires
a surprisingly little power) the ERPs required scattered paths might
initally look enormous.

The real problem is the lack of structures that could be used to reflect
or diffract the signal in rural areas and the absorbtive properties
of vegetation.

> 2) Health hazards from radiation if you crank up the power enough
> to get a good signal because of walls, trees, buildings, etc.

This is a problem with handhelds, but fortunately the available DC-power
is limited and you can not use highly directional antennas with handhelds,
which also limits the awailable ERP.

The proble is how the repeater is going to hear you. If the repeater is
at a high place and omnidirectional coverage is required, the main lobe of
the repeater receiver antenna should extend from the horisontal plane
down to 1 or 2 degrees below the horisontal plane, corresponding to
a gain of 21 or 18 dBi respectively. This can be hard to achive for an
omnidirectional (in horisontal plane) antenna. If feasible, this gain
can still be too little to compensate for the larger path loss (i.e.
reduced capture area) in higher microwave bands.

> 3) Multipath interference due to walls, tree, buildings, etc. Multipath
> can be reduced somewhat by using special antennas and signal processing.

You need some frequency spreading system so that you can avoid these
frequency dependent nulls (in more or less) stationary stations.
A moving mobile station has its own "mechanical" null avoidance
system :-)

Even if frequency spreading is used, you must still expect a large number
(maybe hundreds) of signal dropouts every second lasting 5-30 % of the
time of each multipath cycle. This requires a heavily interleaved code
and a very strong forward error correction, even stronger than the
Compact Disc system.

> start to believe.

15 mW (+12 dBm) is a lot power if you have a line of sight path. At 145 MHz
and a 10 km line of sight path, the path loss is about 95 dB and assuming
omnidirectional antennas at both ends, the received power is -83 dBm or
just below S7. At 1 km that would be S9+6 dB.

At 430 MHz the received power is about 10 dB less due to reduced capture
area in omnidirectional antennas and about 19 dB less at 1290 MHz.

The real question is, what is the power consumption of the rest of the
radio circuitry (receiver, prosessor and the rest of the transmitter
circuitry excluding the output stage). There is no point to reduce the
output stage power consumption (and thus output power) much below the
consumption of the rest of the circuitry.

Hmmmm....

Lots of people seem to be saying to just buy any SW and that will do.

I as well thought that would be the case.

Has anybody tried to do this lately?

I actually went with Aaron to a few stores, including Radio Shack, and was completely suprised to find out that for some reason new SW sets have bands that conveniently begin and end with gaps just before and after 5, 10, 15, and 20MHz. It's as if someone is saying we don't want you picking up on these frequencies.

I personally am a self stiled pesimist and think it's the big corporations saying: OOo. look at these special frequencies. Lets try to bleed the public dry for receivers that will pick them up.

1653. Re: 15mW QSO's

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-29 13:44:15 UTC
From: slay@netcom.com
Message-ID: <slayCtpFHr.I70@netcom.com>
Source record: 262593

: : Hmmm! How many situations have I been in where my battery is about to go
: : and I am close enough to the receiving antenna on the other end that 15mW
: : of power will do the job. Am I missing something here? 150mW I could maybe
: : start to believe.

: measured at LESS THAN THREE MILLIWATTS! ... that's 3mw INTO the
: duplexer! I believe that 15mw will go much further than you think.

Say, correct me if I'm wrong, but don't a lot of cellular telephones
run on something like 10mw?

Thanks I found out last night my license hasn't expired YET :)
Thaks for the info on the 610

now all I need is the darn mike

John Maultsby (maultsby@bga.com) wrote:
: In article <benacpCto7sq.JHJ@netcom.com>,
: Peter P. Benac <benacp@netcom.com> wrote:
: >OK: I was a Unix nut when Ham Radio decided to start ASCII transmissions,but
: >I'm confused. What is a Call Sign Server and how do I access one. I will
: >assume it a Unix Workstation that allows me to Look up Call signs and it's
: >on the internet, but how do I get to it.

: Callsign server... You hit the nail on the head. Telnet to
: callsign.cs.buffalo.edu 2000 (be sure you put that 2000 on the end).
: Then you can type in any callsign and get that person's address. Play
: with it and have fun. See if you're in there! :)

: >While I got your attention I need to renew my license (damn ten years is up
: >already). What is the best way to get a 610 now a days. I have been inactive
: >for awhile, but with my ex-xyl gone I"MMMMMM BACKKK. I hear talk about a new
: >no code tech license. What will happen to my old tech license I got back in
: >1979 when I renew? I like my call sign and don't want to lose it.

: Hmmm..... When did your license expire? I think the grace period is two
: years. If you're within that grace period, you could just renew your
: license, and you're a ham again, and you've got the same callsign.

: However, if the grace period is over, you'll have to go through the
: motions again of testing for a license. Yep, there's a new no-code tech
: license. (Well, new as of '91, at least.) Just pass the test for the
: Novice written and the Technician written, and you don't have to worry
: about the code.

: If you're still within the grace period for just renewing your license,
: get a 610 form from the FCC at 1270 Fairfield Rd, Gettysburg, PA
: 17325-7245. Or, if you can find a local VE testing team, they'll have
: plenty of form 610's to give out.

: If you have to test for a license again, you'll need that VE team. If
: you don't know where to find one, the ARRL can give you some help there.
: I think the number is 1-800-9-NEW-HAM. If you have to get a new license
: and you REALLY want your old call sign, they're about to institute
: something new where you can buy a preferred callsign. All the kinks
: aren't worked out yet, but you'd be able to pay x dollars and pick a
: callsign. You can pick the callsign you used to have.

: Whichever route you have to go, good luck to you!

1663. Need advice on towers

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-29 15:06:48 UTC
From: rn@cs.brown.edu
Message-ID: <1994Jul29.150648.6675@cs.brown.edu>
Source record: 262600
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I would like to get the net's advice/wisdom/experience/opinions on fixed towers (not crankups) on the order of 50' to 100'. Who is regarded as making the highest quality towers? What can I expect to spend? Where can I obtain info on installation (guy wires, concrete for the base, etc)? Is there a knowledgeable person in the vicinity of Providence, RI who would be willing to chat in person and provide some help?

Rob Netzer, KD1TS
rn@cs.brown.edu

1665. Re: 6 Meters-New op needs advice.

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-29 15:10:49 UTC
From: dickrb@lsid.hp.com
Message-ID: <CtpJI2.EGw@hpcvsnz.cv.hp.com>
Source record: 262603

Hi

Welcome to 6 mtrs.... You have made a good choice BUT you have to understand that operating on 6 requires dedicated listening and making noise on the band. I have run a beacon on 6 in the past and it is amazing how that helps. When the band opens all of those quiet hours are forgotten - its great!!

You will find that you end up 99+% listening and very little actual contact time - outside of 'local' qso's. Local being 100 miles.

My other favorite band is 160 mtrs. Both bands require many of the same listening/working skills.

Good luck,

de w7wkr

1666. Re: 15mW QSO's

Greg Tarcza (gregt@col.hp.com) wrote:

: The last time the final amp in our local repeater went out (Colorado
: Springs, CO - repeater elevation > 14000 ft), I noticed that the repeater
: was getting quite weak from about 40 miles away. When the machine was
: swapped out and brought down for repair, the transmitter output was
: measured at LESS THAN THREE MILLIWATTS! ... that's 3mw INTO the
: duplexer! I believe that 15mw will go much further than you think.

: Greg Tarcza WA2OOD

In this case 15mW is probably sufficient. However, around here with all the hills and buildings etc. more often then not one of them is in the signal path and I know 15mW will not cut it. Then again our RACES repeater is located on the side of a mountain just out of town here and 15mW just might do it.

A light bulb can be used as a (very poor) dummy load; this was common practice back in the days of vacuum tube transmitters. As a dummy load, it's pretty leak-ey, so it's not surprising that you could work another station under good conditions. For that matter, I've heard european stations on my dummy load.

: The jolting a bike frame gets from off road riding won't be good for
: the radio. I suggest you get a chest pouch for the radio and keep it
: on your body instead. Try to protect it when you fall. :-)

: Gary

I agree with Gary. I too ride a Mtn. Bike and believe that the shock
would possibly damage an HT. The chest pouch is a great idea. A friend
of mine uses a Yaesu FT-411 when paragliding by strapping it to his chest
with a special harness. The harness puts the rig close enough to his face
that he can push his PTT and speak/hear without much effort. I don't know
if the harness would work with the FT-470 or if the manufacturer makes
other harnesses. If you'd like, I'll get the name of the manufacturer
for you.

Happy hamming and cycling!

Dick Bingham (dickrb@lsid.hp.com) wrote:
: Hi

: Welcome to 6 mtrs.... You have made a good choice BUT you have to
: understand that operating on 6 requires dedicated listening and making
: noise on the band. I have run a beacon on 6 in the past and it is
: amazing how that helps. When the band opens all of those quiet hours are
: forgotten - its great!!
:
: etc...
:

Dick is correct, you listen a lot on 6M.

The band has been rather dry lately so it is possible that there is just
no Sporadic-E activity right now.

If you know of another Ham who is not too far away, arrange to meet
her/him on 6M above or below 50.125. Then you can check out your rig.

Remember that 50.125 is the calling frequency. This is where you will
hear any activity. It is generally not a good practice to carry on
rag chews on the well known calling frequency. When the band is open,
you can find stations generally +- 25Kc from the calling freq.

If you can go FM, listen on 52.525, this is a simplex frequency. Sometimes
I hear stations on 52.525 before they show up on SSB.

Of course you can check below 50.100 for the beacons. Many times I hear
a beacon comming from an area before there is any activity.

Also remember that cross-polarazation will greatly affect local QSOs.
So, if you are horizontally polarized and the local station is vertically
polarized, there will some signal loss. This does not apply to
Sporadic-E QSO's.

Sporadic-E propagation is unique, it comes and goes quickly sometimes.
Commbine this with the fact that there is not as much activity on 6M
as on the other VHF bands and you a will end up doing lot of listening.

Good luck,

Smitty, NA5K

Which service do you plan to use this radio in? I've seen lots of
folks using non-type accepted radios in Part 95/90 operation lately.
Though it rarely does harm, it isn't legal. :-)

Reuters is reporting today that AT&T decided to discontinue funding of EO, Inc., its competitor in the handheld PDA plus radio market.

Does this mean that these devices will be dropped on the surplus market? Is there an opportunity to convert them to amateur digital wireless service?

I am interested in the SoftWave radio by ComFocus as advertised on page 4 of the Aug. '94 issue of Popular Communications. It seems to have many great features but is it worth $1495? Would it be better to buy a JCR or ICOM receiver with a computer interface in the same price range? Has anyone bought one or seen a demo? Any comments or opinions?

1674. GB2RS News 31st July 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-29 17:51:29 UTC
From: dave@llondel.demon.co.uk
Message-ID: <775529489snx@llondel.demon.co.uk>
Source record: 262551
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 31st of July and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First the headlines:-

August's RadCom, which contains the licence changes, has been posted and is also available to non-members.

The 1995 RSGB President has been elected, and

Solar activity is likely to pick up next week.

The August edition of Radio Communication has been posted to all RSGB members. It includes the complete text of the recent Gazette notice detailing the changes to the Full and Novice licences and some explanatory notes.

August's RadCom also includes details of how to nominate someone in this year's RSGB Council elections, and a list of the many Radio Amateurs' Examination and Morse courses starting this Autumn.

As a service to the amateur radio community, the RSGB is making the August edition of Radio Communication available free to non-members. Simply call RSGB Headquarters on 0707 659015 for your copy.

At its meeting on the 23rd of July, RSGB Council elected Clive Trotman, GW4YKL, as RSGB President for 1995. His term of office will start on the 1st of January 1995. In the meantime, he continues to represent Zone E, Wales.

Congratulations to Paul Dean, G0UFN, of the Houghton Le Spring Radio Club who won the Tom Luxmore, G3AWL, CW Memorial Trophy which is sponsored by the Peterlee Radio Club. Certificates are also awarded to Glen Thompson, G0SBN, and Maurice Miller, G0RMO, both of the Tynemouth Club. The competition was held over a one week period on the 2 metre band and, although contacts were sparse on most evenings, some 35 stations were active during the week. Best DX was G0FVS in Norfolk, worked by G4RXR with 10 watts. The organising secretary Bill, G4RXR would like to thank all the stations that took part, especially the many new calls who were exercising their CW skills on the air for the first time. The provisional date for the presentation is Wednesday the 7th of September. Anyone who is interested in attending should contact Arthur, G0FBW, for further details.

The RSGB Council Member for Zone B, the Midlands, is Dave Gourley, G0MJY. He has recently moved house and his new address is: 86 Upton Road, Broadwaters, Kidderminster, Hereford and Worcester, postcode DY10 2YB. His telephone number is 0562 753101.

The Banbury Qualifying 160 Metre Direction Finding event, using map 164 (Oxford), takes place on Sunday the 14th of August. Contestants should assemble at the Haytor Rock car park, NGR 760766, at 1pm for a 1.20pm start. Any competitors requiring tea should notify Graham Nichols on 0295 265492 no later than next Sunday, the 7th of August.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From French Polynesia, F6GQK is now active as FO5OU from Tahiti, and expects to be there for some time. Activity is mainly 15, 20 and 40m CW.

From Malawi, ON6TT is active as 7Q7XT but only until next Friday the 5th of August.

From Canada, a Canadian group will use CY9CWI from St Paul Island from the 12th until the 16th of August. Operation will be on all bands, using CW, SSB and RTTY but with emphasis on the LF bands.

Now the one rally we know of for today, Sunday the 31st of July:

The Rugby Amateur Transmitting Society Annual Rugby Radio Rally is being held at the BP Truckstop on the A5, some 2 miles North from junction 18 of the M1 motorway. The rally starts at 10am. The truckstop will be open for catering and other facilities throughout the day.

There's only one event for next Sunday the 7th of August:

The RSGB's Woburn Rally is held at Woburn Abbey in Bedfordshire. Access is easy from the M1 motorway: if travelling from the north or south, leave the motorway at Junction 13, not 12, and follow the signs through Husborne Crawley to Woburn Abbey. Avoid routes signposted to "The Wild Animal Kingdom" or "Game reserve" and look out for RSGB signs. The event starts at 10am, and features a large trade exhibition in a marquee, an RSGB bookstall and enquiries stand and a members mart. Further details from Norman Miller, G3MVV, on 0277 225563.

HF contest news next:

The Islands on the Air (IOTA) CW and SSB Contest finishes today, Sunday, at 1200 UTC after 24 hours on 3.5 to 28MHz. See March RadCom page 92 for full details.

The Romania DX Contest is scheduled to take place from 2000 next Saturday the 6th until 1600 on the 7th.

The RSGB Ropoco-2 Contest takes place next Sunday, the 7th of August, from 0700 to 0900 UTC between 3.52 to 3.57MHz, CW only. The contest exchange is rather complicated so participants are advised to consult the rules which can be found on page 93 of the March RadCom.

VHF contest news:

The RSGB 10GHz Summer Cumulative Contest takes place from 0900 to 2100 UTC today, Sunday the 31st. See April's RadCom page 82 for further details.

The Wrotham {pronounced 'Root-um'} 70 centimetre repeater, GB3NK, on channel RB4, has been switched off because of an antenna problem. The keeper, Bob Mersh, G8JNZ regrets any inconvenience to users, but at the moment he is unable to say how long it will be off. For further details, contact the Kent Repeater Group whose address is correct in the Clubs section of the RSGB Call Book.

Special event stations active this week include:

GB2MRI which will be aired from Rathlin Island (locator IO65VH) to commemorate the work of Marconi. Operation will be from Wednesday the 3rd, until Sunday the 7th on HF and VHF.

The Cornish branch of the RAF Amateur Radio Society will use GX0RFC, on Wednesday the 3rd of August, during RAF St Mawgan "Airday" on 40 and 2 metres.

GB5GC celebrates the 50th Anniversary of St Dunstan's Camp at HMS Daedalus, Lee-on-the Solent, Hampshire. The camp, for men and women blinded on war service takes place from next Friday the 5th, until Friday the 12th of August. Operation will be on HF CW and SSB.

GB4TSR will be at the Torbay Steam Rally next weekend, the 6th and 7th, at Churston, Paignton. Visitors will be most welcome.

GB0LIS celebrates the 40th anniversary of the West Lancashire Scouts International Camp at Waddecar. Operation will be from Sunday the 7th until Friday the 12th of August on 80, 40, 20 and 15 metres.

And now the solar factual data:

The period from the 18th to the 24th of July has seen only one small flare - a B1/SF, but general solar activity remains very quiet. The HF bands have been generally poor. Sun spot indices have remained low and meaned at 37. Solar flux indices have declined and averaged 77 units. The 90 day flux average on the 22nd was 80 units.

Geomagnetic activity has been mainly quiet with the period averaging an Ap of 9.1 units. The general decline in magnetic activity continues. The mean level since last February has declined from the 40s down to the present 10s. The state has been 'nil nothing to report'. The daily aa indices, as supplied by the British Geological Survey for the period from the 12th to the 18th of July, averaged 25.5 nanoTeslas about K3. The X-Ray flux levels have declined very considerably and averaged only A2.4 units.

I'll repeat the figures. Spots - 37; Flux - 77; Ap index-9.1; X-ray flux - A2.4.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon {pronounced 'Mer-don'} averaged 6.7MHz, though levels declined from 7.2MHz on the 20th down to 6.1MHz by the 24th. The darkness hour lows averaged 3.2MHz with little variation day to day. The highs are now occurring at 20.00 hours and the lows at 04.00 hours. Most days have seen a number of periods of blanketing E.

I'll repeat the figures. Highs - 6.7MHz; lows - 3.2MHz.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg averaged 6.0MHz and the darkness hour lows 3.2MHz.

I'll repeat the figures: Highs - 6.0MHz; lows - 3.2MHz.

And lastly the solar forecast:

This week, the more active side of the sun will be coming into view; solar flux levels are expected to be about the 85s. Geomagnetic activity is expected to be mainly quiet - about an Ap of 10 units. Ionospheric MUFs during daylight are expected to be about 21MHz, and the darkness hours about 14MHz in the south; levels for the north will be down on these.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Victor Bravo and G7 Sierra Sierra series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Echo series.

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast in the 80m, 40m, 6m and 2m bands.

1675. RFI from Heath "Big Ben" Chime Clock

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-29 18:21:47 UTC
From: btoback@netcom.com
Message-ID: <btobackCtpsCB.DI1@netcom.com>
Source record: 262558
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew

I noticed a strange phenomenon two nights ago -- or rather, I tracked it down, but it's been annoying me for months.

I've been plagued for a long time with a strange signal -- sounded like "louder" white noise -- that was recieved in a number of places in the HF bands. Because it sounded like some kind of wierd digital modulation, kind of like a high-speed modem, I assumed it was some kind of external interference.

A couple of nights ago, I tuned across the interference, and for no apparent reason, hit the FM button on my receiver. Suddenly, the noise became coherent: it was the tone generators on the clock, and I verified that it was the clock because one of the tones changed in time with the "tick-tock" sound -- and at the right pitch. The full chime sound could also be heard on the FM signal. I then did some fishing and discovered that the signal was repeated every 375 KHz starting from about 14 MHz. I couldn't find it anywhere below 14 MHz, but it may have been because of the noise level.

Has anyone else had this problem? And what did you do about it? And how the heck can I get a 30 MHz FM signal from that clock?!

In article <940725102304_2@ccm.hf.intel.com> Cecil_A_Moore@ccm.CH.INTel.COM (Cecil A Moore) writes:
>
>Text item: Text_1
>
>Sometime ago someone posted a half-truth about the Ramsey SlyFox hidden
>transmitter. He said that the SlyFox didn't meet FCC specs according to
>a review in 73 magazine. In the interest of truth and fairness here are
>the facts from the 73 magazine article.

Now, now, Cecil, let's get those attributions right. What I said was that the experience of the 73 reviewer was much similar to those of other reviewers... ...that as built, the rig didn't meet specs. And that was indicative that something less than trivial was involved in completing the project.

>The poster's information was mostly incorrect. Quoting from the
>article, "... the level of the second harmonic was only 16 dB below
>that of the fundamental, much higher than allowed by the FCC". But
>this was _BEFORE THE UNIT WAS TUNED PROPERLY_ and the article itself
>says, "Any home-built transmitter... must be tuned up properly."

And the article is correct in this. Cecil is incorrect, however, because he, having waited until the orignal posting expired on most systems, has got it seriously wrong.

The point, Cecil, is that the experience that reviewers are having is in direct contrast to the assumptions which novice builders and new hams are apt to make, and which Ramsey continues to allow them to make via its advertising. To wit: that getting one of these little RF sections perking properly isn't something you want to do with the average Novice's (or no-code tech's) resources.

Unfortunately, that isn't said out front--- ---Ramsey is the kit-industry's 'Whizzo Chocolate Company' in this respect. Yes, if they said 'this kit requires non-trivial alignment and should be attempted by experienced builders only,' they'd sell less of them. The impression (fostered by some shallow reviews by magazines that sell full-page ads to the company each month) is really an 'attractive nuisance,' taking in as it does a lot of naive newbies who think this is an easy and fun way to get an inexpensive signal on the air.

>A clue that the unit was not tuned properly was its low power output.

...which seems to be, as I said, very consistent with the experience of other reviewers, both published and posted.

>Quoting again, "But when I spread the turns on the kit unit... and
>retuned the final capacitor, power increased dramatically... The second,
>third, and fourth harmonics of the kit now measure -70, -50, and -70 dB
>respectively, _EASILY_ satisfying FCC requirements. All spurious
>emissions are better than 54 dB below the carrier..." (emphasis mine)
>Every kit builder should have a wattmeter and a dummy load,(available
>from Radio Shack).

Okay, but you can't measure spurs with a watt-meter. It just sees
RF. Fact is, low power is a bad sign, yes. Full power is a good sign,
but if a third of it is at the second harmonic, and you have no
spectrum analyzer (how many No-coders and Novices do?), you're sunk.

And does Ramsey say 'don't even try to tune this beastie up if you
don't have a dummy load and VHF/UHF watt-meter? Hmmm?'

>In the 50's, it was a rare ham who didn't wind his own coils and
>everyone knew the coils might have to be adjusted for proper operation.

This ain't the fifties. In the fifties, Heathkit was just a-astartin.

>It is a sad day in ham radio when kit-builders complain that they
>shouldn't have to pinch or spread coils that they had to wind for a kit.
>If you can't achieve resonance in a final by adjusting the capacitor,
>then you must adjust the coil... an extremely simple concept. Should a
>kit manual also be required to teach the physics that hams are supposed
>to know in order to pass their ham tests?

Yes.

Heath sure did. They told you how to align their kits. If it was beyond
the stated target market, they shipped that section, pre-built and aligned.

So you see, if Ramsey would look at the dichotomy between the abilities
of the people who are buying this stuff, and the requirements of the
kit, and do what is needed to close the gap, we wouldn't have to have
these discussions again and again. They have several options, but don't
seem to choose any of them.

:
: The nominal voltage of a single NiCd cell, fully charged, is generally
: assumed to be about 1.2 V (as compared to 1.5 V for carbon-zinc or alkalines).
: A "9V" battery might contain seven (total 8.4 V) or eight (total 9.6 V) of
: these cells, but you won't hit exactly 9V at full charge.

Actually, they seem to contain 6, for a grand total of 7.2V. I assume they
couldn't fit the rest in, and still have a decent amount of storage capacity.

Greg.

> you picking up on these frequencies.

Actually only the very cheapest (analog) radios are like that. They
cover only the bands used by shortwave broadcasting. The fewer
frequencies they cover, the more they can spread them out on the
dial, and that makes finding stations easier on an analog set.

They cover broadcast bands, not WWV, because WWV is just to boring
to sell :-).

But you don't want an analog radio anyway. You're going for an
occultation: you only get one chance. Shortwave propagation and
Murphy's law being what they are, you'll have WWV tuned in at 10
MHz, and it will fade right out 5 minutes before immersion. With
an analog radio you'll be frantically fishing for an alternate
frequency when you ought to be guiding your telescope.

Go to Radio Shack and get a DX-375. It only costs $100. It covers
all WWV and CHU frequencies. Program the presets to WWV frequencies
2.5, 5, 10, 15, and 20 Mhz. Don't forget CHU at 3.33, 7.335, and
14.67 Mhz. With the presets, you can find the best signal in a few
seconds.

> It's as if someone is saying we don't want
> you picking up on these frequencies.

Remember that the most effective way to induce people to plot
against you is to act paranoid :-).

Henry B. Smith (hbs@crl.com) wrote:
: If you can go FM, listen on 52.525, this is a simplex frequency. Sometimes
: I hear stations on 52.525 before they show up on SSB.

To check out the rig, you could also try to hit a 6M repeater (again, assuming you have FM capability). Even if there's no one there to talk to (my experience), the repeater ID and squelch tail go a long way in the warm&fuzzy department, and it's something you can actively *do* to check things out.

Gee, Cecil, it's a good thing that kit manufacturers can expect not to
have to re-teach hams the 'basic physics' that they had to know to get
their ham licenses, isn't it?

Greg

OK Here are the final comments from my freind and what he decided to do:

SUBJECT: Thanks for the Help (was: WWV request

Well First off I would like to thank all of you who so generously
replied to my desperate query. I am sorry to say I will not be
able to name my first born after anyone because there were so
many who suggested my final solution so I'll just have to name
Him (Nat) or if it's a girl (Netta) after the great Internet :-) .

Well my solution was to purchase a Radio Shack model DX-380. After
most of you said "Any short wave radio can pickup WWV" I decided
to get a nice receiver. It sold for $119.99 (on sale) and has lots
of features and yes it does pickup 2.5, 5, 10, 15, 20, and 25 Mhz.

Again it was frustrating to me that you have to spend so much for
what used to cost about $30.00 with the weather band included. But
if so few people bought them it probably was not cost effective
to manufacture them. Thanks a lot to Radio Shack for discontinuing
them, NOT! Well this is the last you'll hear from me on this subject
[aren't you lucky :-)] but ya'll can still debate the virtues of
low cost WWV reception all you want.

Thanks,
Aaron Henderson

Here's the TEXT of their ad:

Ramsey breaks the price barrier on FM rigs! The FX is ideal for shack,
portable or mobile. The wide frequency coverage and programmable
repeater splits makes the FX the perfect rig for Amateur, CAP, or MARS
applications. Packeteers really appreciate the dedicated packet port,
"TRUE-FM" signal and almost instant T/R switching. High speed packet?
...No problem. Twelve diode programmed channels. 5W RF output, sensitive
dual conversion receiver and proven EASY assembly. Why pay more for a
used foreign rig when you can have one AMERICAN MADE (by you) for less.
Comes complete less case and speaker mike. Order our matching case and
knob set for that pro look.

End quote.

To give them credit, they say the 'assembly' is easy, and say nothing
about getting the damn thing working right.

>Kok Chen, AA6TY kchen@apple.com
>Apple Computer, Inc.

From what I've heard, QST now comes in a news-stand issue which is
dated for two months, i.e. July-August for $4.95 ($1.95 more) and
which has a different cover from the one you get as an ARRL member.
However, I believe the contents of the magazines are the same, but
I may be wrong. Some of the ham stores here in the Ohio received the
newsstand issue (July-August) with the higher price and sent it back
saying they wanted the one month issue (July) but as yet it hasn't
showed up.

I also noticed that the one month dated QST no longer has a price on
the front cover, interesting. ;)

Just to let you know the special event station GB0SNF will be on the air
starting Sunday July 3rd and will continue or the rest of the week.

GB0SNF is at Salopia Ninety Four which is run by Shropshire County
International Camp. Scouts from all over the UK, Europe and elsewhere
in the world will be in attendance.

We hope to be on most of the HF bands and 2m ssb.

Time of operating will be approx 0800-1500 UTC.

* VE3ONT EME CONTEST SKED *
==========
The Toronto VHF Society, VE3ONT, will participate in this year's ARRL EME Contest using the Institute for Space and Terrestrial Science's 46m (150') Algonquin Park dish (located at grid square FN05xw). This year's operation will provide an increased opportunity to work 144 MHz stations.

UTC Date VE3ONT TX Freq Listening Range Approx. Times

29-Oct-94 432.050 MHz 432.050 - 432.060 MHz 0645 - 1815 UTC
30-Oct-94 1296.050 MHz 1296.050 - 1296.060 MHz 0754 - 1844 UTC
26-Nov-94 144.100 MHz 144.100 - 144.110 MHz 0538 - 1645 UTC
27-Nov-94 144.100 MHz 144.100 - 144.110 MHz 0646 - 1713 UTC

Because the Algonquin dish has a 9 degree lower elevation limit, stations with horizon fixed antennas in eastern North America will have a limited chance to work VE3ONT. The following operating hints will improve your chance of making a QSO:

- As in 1993, VE3ONT will work "split" frequency. Do not call on VE3ONT's TX frequency. Pick a random frequency in the listening range. Use the full range. VE3ONT will be looking for stations in the clear.

- VE3ONT will use circular polarization on all bands. You may use linear or circular polarization to make a contact with VE3ONT. If circular, use RHCP on TX and RX for the 144 and 432 MHz bands. On 1296 MHz, they will have switchable sense so you may use either the satellite or EME polarization convention.

- Conditions permitting, VE3ONT may start each operating period on SSB to work strong stations as quickly as possible. Please do not call again for a second contact on CW. Conversely, if you make a contact on CW, please do not call again for a SSB QSO.

- All contacts will be "random" with no schedules or sequencing. Please be patient. VE3ONT experienced a great deal of QRM during last year's event.

Low power and OSCAR class stations are encouraged to make an EME contact with VE3ONT. 100 watts delivered to a single long yagi should be sufficient on the 144 and 432 MHz bands. On 1296 MHz, stations were worked with as little as 10 watts and a 2m (6') dish in 1993.

Be advised that use of the dish at the Algonquin Space Complex is always subject to last minute preemption for non-Amateur purposes.

QSLs with an SAE should be directed to Dennis Mungham VE3ASO, RR 3, Mountain, Ontario, Canada, K0E1S0. Reception reports are also welcome. Send your log to the ARRL.

For further information, contact Peter Shilton VE3VD, (905) 774-8766. The latest developments will be provided at the Central States VHF Conference July 29-30, Memphis, TN, and the International EME Conference, Gottskars, Sweden, August 26-28.

* NEW SPACE ORGANIZATION *
==========
A group of space science educators involved in the use of classroom and school space simulators (including permanent, semi-permanent, and temporary simulators) met at University School in Shaker Heights, Ohio (a suburb of Cleveland) during July of 1994 for the purpose of establishing a national organization.

The purposes of the organization are:

1. To facilitate the exchange of ideas, information, and technical enhancements among simulator using educators.

2. To assist teachers interested in developing space simulators.

3. To provide consultation services to teachers and schools regarding the use of space simulators in space science education.

4. To encourage the use of the information superhighway as a tool for enhancing space science simulations.

5. To provide assistance regarding sources of free or low cost resources and materials from the aerospace community, government organizations, and information providers.

6. To advance the use of simulation as an educational technique in all areas of education.

Membership in The National Association of Space Simulating Educators is open to anyone interested in education. The organization's focus is school educators at all levels from pre-K through college.

For a free informational pamphlet, write The National Association of Space Simulating Educators, attn. Robert E. Morgan, University School, 20701 Brantley Rd., Shaker Heights, Ohio 44122 or send electronic mail requesting the pamphlet to: nasse@shadowso.com.

I have used a Larsen on-glass 2meter antenna and they work great. Just remember to glue them high up (I used a rear side window) and that there is no in-glass FM radio antenna on the spot. You can buy cellular look-alikes these days which are shorter and make it easier to get in a garage.
Peter, KC1QF/EI4GV/ON9CGV, Brussels

The mast clamp used for the Yaseu rotators GD800,1000 is a good
replacement for the HD73 mast clamp. Design is basically the
same and the hole spacing is quite close.

Then you should demand they fix it. Why should the rest of the world have to adapt because a service provider is too lazy to supply users with the proper tools?

I note that the poster did not append his own e-mail address to the end of his post.

In article <gregCtpsvI.Ao0@netcom.com>, Greg Bullough <greg@netcom.com> wrote:
> ...that as built, the rig (SlyFox) didn't meet specs.

It didn't meet specs because it wasn't tuned yet. Kits don't magically work, Greg. You have to tune them. I've been told that the guy at 73 forgot to RTFM.

>that was indicative that something less than trivial was involved
>in completing the project.

Don't tell anybody I told you this... ham radio is not trivial... kits don't work unless you tune them... if you are into trivial, don't attempt a kit. I learned a heck of a lot _because_ my Heathkit didn't work.

>he, having waited until the orignal posting expired on most systems, has
>got it seriously wrong.

When I read the article in 73, I tried to retrieve your posting but it had expired. I had to recall it from memory and may not have all the details right... but I think I got the gist right.

>but if a third of it is at the second harmonic, and you have no
>spectrum analyzer (how many No-coders and Novices do?), you're sunk.

Not true... a dummy load and a wattmeter is all you need to tune the SlyFox because according to the 73 article, it meets the FCC specs if it is tuned properly.

>And does Ramsey say 'don't even try to tune this beastie up if you
>don't have a dummy load and VHF/UHF watt-meter? Hmmm?'

Come on, Greg. Ramsey also doesn't say 'you have to understand English to read the manual'. Some things should be obvious to anyone with a ham license. The light bulbs are a fair substitute for a dummy load and a wattmeter, assuming one knows that the final has to be tuned to resonance (God help us if a bona fide ham doesn't know that).

>>In the 50's, it was a rare ham who didn't wind his own coils and
>>everyone knew the coils might have to be adjusted for proper operation.
>
>This ain't the fifties. In the fifties, Heathkit was just a-astartin.
>
>>Should a kit manual also be required to teach the physics that hams
>>are supposed to know in order to pass their ham tests?
>
>Yes.
>Heath sure did. They told you how to align their kits. If it was beyond

>the stated target market, they shipped that section, pre-built and aligned.

I'll quote you here. "This ain't the fifties". Heathkit went down the tubes... seems it cost them so much to teach physics and pre-build and align sections, they couldn't make a decent profit.

You will probably agree with me on this one... the guys who mail-ordered their ham tickets from Southern California should not attempt a kit.

From: nomad@ecst.csuchico.edu
Message-ID: <31bt7l$3u7@charnel.ecst.CSUChico.EDU>
Source record: 262528

I have a few questions regarding Kenwood radio repair. I need to
send mine in (has a receive problem on 2m). I can't find all my paperwork
on it and, because of that, I can't find (a) where to send it and (b) a phone
number to call to find out or get info on where to send it.

Can anybody supply me with these things?

Next, I read the warranty card and it said something about returning
it in the original box. I recently moved and the original box got lost (now
there's a surprise). Anybody know if it would void the warrenty by returning
it in another box?

I'd appreciate any help and information on this topic. I've got
two weeks left on my year warrenty so I need to get this thing in pretty
quick...

Please send any and ALL replies via E-mail as I rarely get a
chance to read this newsgroup. Thanks!

1699. Simulcasting repeaters on same freq

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-29 22:23:29 UTC
From: cyamamot@marconi.jpl.nasa.gov
Message-ID: <31bvh1$dbs@marconi.jpl.nasa.gov>
Source record: 262550

Greetings all!

I was wondering if anyone has any experience with repeater simulcast. The Los Angeles County Sheriff has it on their system with over 30 repeaters all on the same frequency, but all phase locked so that overlapping regions have nearly zero beat note (perhaps at most a slight fading effect once every 4 seconds).

I've read in Mobile Radio Technology that these commercial sites are synchronized via WWVB or GPS.

What I'd like to know is if this is plausible for ham radio use for say two sites? Is there a simple way to get reused Micors/Mitreks/etc. to be phased locked together? It doesn't seem easy. The receiver voting portion seems easier than getting both sites to xmit in phase.

Is there equipment from Motorola that already does this? How much would something like that be? Could I get a DDS board that replaces the elements in the Micors/Mitreks that can be fed a 10MHz reference signal from a GPS/WWVB receiver?

Any suggestions or hints would be appreciated.
Thanks & 73's
- Cliff

FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 29 JULY AND FORECAST FOR 30 JULY - 01 AUGUST

1A. SOLAR SUMMARY
Activity: very low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 76/14

GOES satellite data for 28 Jul
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
30 Jul 31 Jul 01 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 30 Jul: 76/14

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled with one active
period.

Estimated Indices : A K Observed A Index 28 Jul
Learmonth 14 3322 3433
Fredericksburg 11 20
Planetary 11 15

Observed Kp for 28 Jul: NA
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
30 Jul 10 Quiet to unsettled
31 Jul 10 Quiet to unsettled
01 Aug 10 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
29 Jul normal normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST

Just a quick request. Are old QSTs worth anything? I'm looking to get rid
of a LARGE number of old ones (been a life member since the early 1970's)
Should I try to sell them, give them to a library, or just toss them out?
Thanks in advance.

Chart Start: Day #151

NOTES:
The 10.7 cm solar radio flux is plotted from data reported
by the Penticton Radio Observatory (formerly the ARO from
Ottawa). High solar flux levels denote higher levels of
activity and a greater number of sunspot groups on the Sun.
The 90-day mean solar flux graph is charted from the 90-day
mean of the 10.7 cm solar radio flux.

Howdy. I need some sort of circuit that can open a switch for about half a sec. or so and then close it and then repeat it after about ten seconds. Could someone give me an easy diagram for this? Thanks.

P.S. Does anyone know what a varactor diode is and where I can get one?

Yes, in the summer of 1960 (methinks, maybe 59) we had 17Q2728. Couldn't
have been later 1961 becauseI was still in high school at the time.

In a previous article, jaevans@clark.net (John A. Evans) says:

>Subject: Problem reading CD
>

I bought a Mitsumi 2x drive and the Buckmaster CDROM at Dayton to put
hamcall on my PacketCluster node. It works fine. The platform is a
486SX/25 using the Mitsumi interface card, and it has been on-line
continuously since early May. PacketCluster does not use menu.exe,
however.

Good luck! 73, Drew

Propagation Forecast Bulletin 30 ARLP030
>From Tad Cook, KT7H
Seattle, WA July 29, 1994
To all radio amateurs

SB PROP ARL ARLP030
ARLP030 Propagation de KT7H

The Space Environment Laboratory is repairing some system problems
they have experienced over the past week, and we don't have all of
the data that is usually available to put together this report.
Things should be back to normal in time for next week's bulletin.

Solar activity was a bit lower last week, with flux values down
about five points. Solar activity is expected to stay low over the
next month, with the highest solar flux probably in the mid
eighties.

Just before mid August, active geomagnetic conditions should return,
lasting about ten days.

Sunspot Numbers from July 21 through 27 were 38, 29, 18, 20, 14, 22
and 22, with a mean of 23.3. 10.7 cm flux was 77.3, 77.6, 76, 75,
75, 74 and 74.3, with a mean of 75.6.

In a previous article, chesney@cimar.me.ufl.edu (Vann Chesney) says:

>I am interested in the SoftWave radio by ComFocus as advertised on
>page 4 of the Aug. '94 issue of Popular Communications.

A good friend of mine ordered one at Dayton this year. He is not pleased.
The HF receiver sensitivity leaves much to be desired, the user interface
is ackward (for example, leading zeros are required on keyboard entered
frequencies), and many of the features don't work. It is a good idea;
this product just isn't quite yet ready.

1710. Re: repeaters in the microwave bands

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-30 02:50:17 UTC
From: wkinning@nyx10.cs.du.edu
Message-ID: <31cf59$m5t@nyx10.cs.du.edu>
Source record: 262430

Thanks to everyone for the microwave information. It sounds like there are good antennas for omnidirectional propagation and the microwave characteristics of knife edge diffraction, forward scattering, and passive reflection enable contacts without line of sight. Several people mentioned that in addition to the 1.2 Ghz rigs available here in the US market, there are now 2.4 Ghz rigs being offered in Japan.

Kerry Banke, N6IZW, mentioned he is running an experimental 10 Ghz broadband repeater/linear translator with a slotted omni antenna, and it works for all modes.

Time Division Multiplexing sounds like a good choice here. Does anyone have any references to commercial implementations of omnidirectional microwave systems running either FM voice repeaters or digital communications ? I would like to study the design choices they made.

I'd have to play with that a good deal. This will prevent loud squeals from audible beat notes. And for stationary receivers it will prevent subaudible buzzes such as you can get at 1.2gig from picket-fencing. But, in the fringe area on the line equidistant from both (N?) transmitters you get absolutely vicious picket fencing as you drive along. You also get slowly moving nulls on that line equidistant between the stations such that at say 450MHz you could step to the left (no, we're not doing the hokey pokey in this news-group) a foot and bring up a very strong signal when you found yourself in a null. This effect would be serious in some regions with the signal levels within 1dB of each other. In VERY high signal level regions, on a line between the sites, it might be more like .1dB being significant. But ....

Stabilizing them is easy. Pick up a Cs standard for each site. It will stabilize everything in the building to within very small fractions of one Hertz at 900MHz REAL easy. (Actually Rb would be good enough and a great deal cheaper. A very good ovenized crystal oscillator might be good enough if someone trundled around and retuned them periodically using a Cs or Rb standard. Off hand I'd pick Cs myself. Then nobody'd have to go trundling around tweaking things over *VERY* long periods of time. Ah the miracle of frequency synthesziers.)

This message is everyone that knows the Rules & Regs better than myself:+}

Well forget my last post....scratch it....ignore it....because I stand corrected. I now know that modification of ham gear for use out of band is *NOT* "Type Accepted" equipment. Use of non FCC approved equipment is a crime. Any information that I gathered from this post will be for information purposes only!! Therefore I *WILL NOT* preform any of the modifications metioned in the previous posts. Although I realize that you can perform the mods, it (as far as I know) is within the boundries of the law, you can *NOT* actually transmitt with non type accepted equipment.

I do appreciate the help that you folks have given me.

> BTW, would CHU (Canada, 7.335 MHz) do as well? I often get better
> reception of them than of WWV.

It's the same with me---I think CHU is near Ottawa. The other
frequencies are 3.330 MHz and 14.670 MHz.

There was someone who would occasionally post a "CHU preach"
on comp.protocols.time.ntp extolling the virtues of transmitting
time-code during seconds 31--39 in Bell 103 format, i.e., the
300 bps modem format. An FSK receiver and some trivial glue
gets you a box with RS-232 time output. If you've already got
a radio, that's very low-cost time at roughly millisecond accuracy.
(Loran or GPS, though, at ~100 ns, is a *big* step up.)

NOTE: The Effective Sunspot Number for 28 JUL 94 was 25.5.
The Full Kp Indices for 28 JUL 94 are not available.
The 3-Hr Ap Indices for 28 JUL 94 are not available.
Greater than 2 MeV Electron Fluence for 29 JUL is: 8.1E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet to active
conditions for the past 24 hours. The GT 2 MeV energetic
electron flux was at mostly normal to high levels.

STD: Fluence levels for electrons at greater than 2 MeV were
slightly elevated, but still near normal.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly quiet to unsettled.

Event probabilities 30 jul-01 aug

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 30 jul-01 aug

A. Middle Latitudes
Active 20/10/05
Minor Storm 10/05/05
Major-Severe Storm 05/01/01

B. High Latitudes
Active 20/10/10
Minor Storm 10/05/05
Major-Severe Storm 05/01/01

HF propagation conditions were normal over all regions.
No changes are expected over the next 3 days. In fact,
propagation may become slightly above normal over many regions
as levels of geomagnetic activity continue to subside to quiet
levels.

Give them to a library or radio club that will make them available to
the public. Or leave some of them in waiting rooms for doctors. dentists,
etc. Don't let some collector bundle them up out of sight, and don't consume
landfill space with them.

Cliff,
I don't knpw the paticulars about the system but in the Puget Sound Area K7PP has four transmitters on the same freq. They are all brought up at once and the phasing is handled by audio delay lines at the master station. He also is going to high stability oscillators in the near future to do away with any vestiges of flutter. It works very well. You can find him in the callbook and he is very helpful.

I was thinking the same thing, but it seems the receiver
is separated from the processing. If the receiver and
processor are far enough apart, and the transfer method
is not succeptible to RFI, I would think it would work
out fine.

I personally would like to see more than just HF and VHF
m'self, though.

Just some thoughts..

I've done it on 10 meters and worked someone about ten miles away. This
probably would not be to good for todays solid state rigs.

Sorry, got interrupted and didn't finish this posting. Alan has already
explained what John meant but here it is again with the obvious implied
words that were left out.

"it's easier to spread the coils a bit" (on a coil with too many turns)
"than to have to add more turns" (to a coil with too few turns).

Well, the difference may be the perceived value of the cards. The
OE1XRW station is "merely" a special events station. Whereas Derek is
manager to some semi-exotic DX (marginally exotic? :-) :-).

> Some European managers
> do this routinely. For mailings to non-US, some managers mail all
> their cards from a neighboring country with lower postal rates.

Received a card yesterday from DL1OY (manager for EV5DX) mailed
from Holland. If memory serves, Nellie mailed my XF4CI card from Texas.
ZD8Z's card from VE3HO was mailed from somewhere in the U.S. east coast.
So, it is not just European managers who is doing the smart thing.

Hmmm... can't managers in different parts of the world collaborate
a little in this respect? DL1OY, as an example, could send Derek
a bunch of cards, already filled out and in their SAE, in bulk.
Derek can stick 29 cent stamps on them and give them to the USPS.
Derek, in turn, can send DL1OY cards for 9V1YC destined to Germany
in the same manner. It would still be much faster than the Buro.

More hmmm... come to think of it, there could be simply stateside
sub-managers who just take the bulk-shipped SAEs from a European manager
and simply stick 29 cent stamps on them and push them into mailboxes.
Wimps like me, who would never think of becoming a QSL manager, can
volunteer services this way.

BTW, to all QSL managers, whereever you are, a big Thank-you!

It it takes this much debate over what John meant, then let's hope
he's not the one writing the assembly manuals for the kits ;)

How about having stateside QSL managers who PRINT and mail QSL cards for
foreign stations based on graphic files and/or databases sent over Internet?
Are we nearing the 21st century or not?

Archive-name: radio/rec-radio-info/welcome
Last-modified: $Date: 1994/01/02 22:00 $
Version: $Revision: 1.06 $

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source
of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group and
to news.answers every two weeks. You are now reading the first article, which
explains what rec.radio.info is, and answers some Frequently Asked Questions.
The second article is titled "Submission Guidelines", and you only need to
read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with
a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit
chat about radio. Rec.radio.info will contain informational, factual articles
only. Follow-ups are redirected to an appropriate other group, and further
discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it
was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered
presentation in rec.radio.info (even with cross-posting, only one message, with
```

a unique Message-ID, is propogated across the net). This tag also facilitates a pre-existing method of dropping or cancelling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:
/Newsgroups:.*[,]rec\.radio\.info/h:j
either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:
rec.radio.info:!s/:^
in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:
sequence
rec.radio.info
rec.radio.
at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, I will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for disussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is Mark Salyzyn. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@ve6mgs.ampr.ab.ca

Comments, criticisms, suggestions or questions about the group can be e-mailed to:
rec-radio-request@ve6mgs.ampr.ab.ca

But before you do so, please be sure to check out the "Submission Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. I receive information in my mailbox; I then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap (or possibly comp.newprod) may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, I would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. I

reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all I can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

brian@UCSD.EDU (Brian Kantor) has kindly supplied a mail list server for rec.radio.info. Non of the articles will be digested, due to their size, so you will receive individual mailings for every article posted to the group.

Mail sent to radio-info@ucsd.edu will be forwarded to the moderator and thus is an alias to rec-radio-info@ve6mgs.ampr.ab.ca

To subscribe and unsubscribe via the listserver; the format for that is

sub address radio-info
unsub address radio-info

where 'address' is your full mailing address. Send this request to

listserv@ucsd.edu

Note that the server will automatically delete any address that bounces mail. If you leave the address portion blank, it will try to deduce your address from the mail headers. This may not work if you are on bitnet, milnet or some other non-Unix host, so it is recommended to put your return address in any case. For example:

sub mymailbox@myhost.mydomain.mil radio-info
or
sub MEMEME01@DMBHST.bitnet radio-info

or something like that.

-- Will the material appearing in rec.radio.info be archived somewhere?

< Dated information here >

Yes. Still firming up details at the moment but here is a preliminary list:
- unbc.edu as maintained by Lyndon Nerenberg <lyndon@unbc.edu>
- nic.funet.fi maintained by Risto Kotalampi <rko@cs.tut.fi>
saved to /pub/dx/text/rec.radio.info currently stored as numbered files.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat

transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for news.answer. This requires co-operation and good will to be beneficial to the community in the rec.radio hierarchy.

I suggest reading the posting guidelines for more information. I am open to suggestions.

I thank the following individuals for their input into this article:
rec.music.info moderator Leo Breebaart rec-music-info@cp.tn.tudelft.nl
rec.radio.broadcasting moderator Bill Pfeiffer wdp@gagme.chi.il.us
Paul W. Schleck, KD3FU pschleck@unomaha.edu
Ian Kluft, KD6EUI ikluft@uts.amdahl.com

SILVER SPRING, MD JULY 30, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-211.01

AMSAT-UK Land-Line Phone Numer Changes For Non-UK Callers

Some of you will be aware that as from 1995 April 16, all UK telephone area
codes will change. With five exceptions listed below, all will simply
acquire a leading digit "1".

Thus for example, when calling Amsat-UK from overseas, after 95-APR-16,
you will ring +44 181 989 6741.
^
+---- Additional "1"

Key: "+" is your code for International access, "44" is UK, and "181" is
the new code. (The present code is "81").

From 94-AUG-01 until 95-APR-16 both new and old codes will work to allow
these changes to be phased in.

They are designed to ensure that Britain has enough dialling codes to last
well into the next century.

Remember, the old area codes will cease to work after 95-APR-16; the new
ones are already activated.

So start changing your memory phones and databases now!

And of course, beware the overlap problem that will plague us for a couple
of years while old numbers persist in written material, and the new numbers
appear early. You should be able to tell the difference, as NONE of the
present day "old" UK codes commences with a one.

The five exceptions mentioned, which will have completely new area codes,
are:

City Old Code New Code
----------------------------
Leeds 532 1132
Sheffield 742 1142
Nottingham 602 1159
Leicester 533 1162
Bristol 272 1179
```

Mode-B : MA 180 to MA 256 | Move to attitude 230/0, Sep 12
[G3RUH/DB2OS/VK5AGR]

DO-17: DO-17 still continues to transmit its voice message on a downlink frequency of 145.825 MHz.

RS-10: WC9C reports that RS-10 has been performing well. Although the CW Robot was off for about a week, it is now back on. Since WC9C got back on around Field Day after being off for a few months he has noticed a change in the satellite's 10 meter antenna pattern. Now it is about 6-10 dB weaker as it approaches and is stronger as it passes by. This was just the opposite just a few months ago. Does anyone know if the "parent" spacecraft orientation has changed? Last week the Special Event Station WA3NAN was on 29.391 MHz and heard lots of station trying to working them. [WC9C]

AO-10: KC6EIJ reports that AO-10 is putting down excellent signals but now suffers from NO OPERATORS! He suggests that before you start you satellite operations each day, take a "listen" to AO-10 and find out how it is doing. DON'T WRITE OFF AO-10 YET BECAUSE IT STILL HAS A LOT OF LIFE LEFT! [KC6EIJ]

UO-22: Operating normally. [K6OYY],

KO-23: Operating normally. [K6OYY]

KO-25: Operating normally with lots of activity. Numerous stations have noted the element sets for KO-25 are not accurate, but are usable. A similar problem happened on a previous OSCAR satellite launch, in that case the launch vehicle, or parts thereof were being tracked, instead of the satellite of interest. [K6OYY]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ N0QCU. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

: Give them to a library or radio club that will make them available to
: the public. Or leave some of them in waiting rooms for doctors. dentists,
: etc. Don't let some collector bundle them up out of sight, and don't consume
: landfill space with them.

I disagree with almost everything here. First .... have you ever tried to
go to a library and look up magazines from only a couple of years ago ....
let alone 20 years or more? It generally .... cannot be done.... they'd
rather move it all to micro-film. Doctors, dentists offices .... I don't
think so .... not magazines more than a couple of months old .... talk
about land fill... that's it!

A radio club would be a good idea ..... IF they have room in a club
ham shack ... which most clubs do not have. I suggest you pass them
out free to newer hams so that they can get a "feel" for what ham
radio was like in the years before they got on the air.

Or ... you can always take them to a ham swap meet and sell 'em.

There's a ham (who shall remain nameless) down in California
who has one of the largest collections of ham radio related magazines,
books, callbooks .... everything .... including a complete collection
of QSTs. He's also got magazines from a bunch of different countries
..... it fills up a garage (and then some).... it's a regular library
.... thousands and thousands of different periodicals.

The sad news is that he mentioned that he would be willing to donate
them to the ARRL or a club who would be willing to maintain them.....
alas..... nobody wants it because it takes up too much space and
resources.

So, sell if you wish ..... or give em to those who want to read
up on the history of the hobby ..... but don't expect that they'll
be read if given to a library or even a radio club (where it'll
likely stay in one ham's house anyway).

It's just an opinion.

To which I reply:

Our research library has QST's going back to January 1960. When I
get free time I'll randomly pull out one of the bounded volumes and
page through a couple of months not looking for anything specific;
I always walk away having gained some new ideas or a new interest.
I'm not the only one - I always see dog-eared pages and notes written
in the margins. One doesn't have to be looking for anything in
particular - QST's are full of good stuff.
So even an incomplete collection will be welcomed by users of your
library.

>A radio club would be a good idea ..... IF they have room in a club
>ham shack ... which most clubs do not have.

My collection of 73 Magazine went back to issue #2 (1961?); I
donated them all to the Lockheed radio club which they welcomed
with open arms. I was very content knowing they'd treasure them
as much as I had.

Please try to find a good home for your magazines - find someone
who will recognize their worth.

>So, sell if you wish ..... or give em to those who want to read

How to Use the WB7TPY
Packet <-> Internet Gateway

First, some brief operational notes:

(1) Messages must not contain any foul language, or commercial purpose.
(2) Messages can only be sent to countries that the United States has
a third-party agreement. All others will be destroyed.
(3) Messages from the internet should be less then 5K in length.
No files should be sent.
(4) If you have questions, please do not hesitate to contact me either on
packet radio: WB7TPY@WB7TPY.AZ.USA.NA -or-
Internet : david@stat.com

(5) Have fun. Use the gateway as much as you like. That is what it is
there for.

From Internet to Packet

Send mail to the internet address of:

gate@wb7tpy.ampr.org

The first line of text must contain a full packet address, preceded with the
word "Packet:"

For example, mail to my packet address, would have the first line of text;

Packet: wb7tpy@wb7tpy.az.usa.na

** NOTE: this line MUST be left justified.

From Packet to Internet

Send as private mail (never a bulletin) to the packet address of:

gate@wb7tpy.az.usa.na

The first line of text must contain a full domained internet address,
proceeded with the word "Internet:"

For example, mail to my internet address, would have the first line of text;

Internet: david@stat.com

Editor, HICNet Medical Newsletter
Internet: david@stat.com FAX: +1 (602) 451-1165
Bitnet : ATW1H@ASUACAD

I do remember that RS did have a combo WWV/Weather cube, but it only lasted one catalog. This was about 15 to 20 years ago. Whenever RS comes up with something realy inovative that some of us can use, it isn't around for long, like their AM Stereo car radio, "Silent Play", a real multimode timer, etc.

1743. HW100/101 Rubber Belts

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-31 14:27:42 UTC
From: palsson@ucssun1.sdsu.edu
Message-ID: <31gccu$1t2@pandora.sdsu.edu>
Source record: 262448

I received a number of tips suggesting O-rings as replacements for the rubber belts used in the Heathkit HW-100 and HW-101. (Thanks to Pete Rossi, Dave Adams, and Jeffrey Angus.)

In case others are interested, I found some at our local Home Depot (discount hardware store, San Diego area) that fit perfectly:

#89 O-rings, dimensions 2-3/16" X 2" X 3/32"

BTW, they were only $0.49 each.

1744. Re: Ramsey SlyFox

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-31 14:37:27 UTC
From: JoeMoell@cup.portal.com
Message-ID: <118848@cup.portal.com>
Source record: 262454

Wow, my SlyFox review was one of the most controversial columns I've written in almost 6 years with 73 Magazine! Between the comments here and the ones I got at the swap meet today, it's clear that almost everybody disagreed. Half thought I was too hard on Ramsey and the other half thought I wasn't tough enough. Nobody was in the middle. The opinions expressed in this newsgroup are interesting, but it appears that none of the posters have actually built this kit. If any have, please tell me your own experiences---i'm interested.

A couple of posts require corrections:

7/25/94 33/1735 Cecil_A_Moore@ccm.CH.INTel.COM (Cecil A Moore) writes:
>It is a sad day in ham radio when kit-builders complain that they
>shouldn't have to pinch or spread coils that they had to wind for a kit.
>If you can't achieve resonance in a final by adjusting the capacitor,
>then you must adjust the coil... an extremely simple concept. Should a
>kit manual also be required to teach the physics that hams are supposed
>to know in order to pass their ham tests?

There was no such complaint. Not every ham is savvy about RF, and it's important to keep the novice builder in mind when reviewing a kit.

In the SlyFox manual, the transmitter tuneup first peaks the two triplers, using two test points. Then there are only two steps that instruct the builder how to tune the final stage. I hope Mr. Ramsey will not mind if I quote them:

"9. You should now be able to see RF power at the output antenna jack, J1. Adjust capacitor C12 for maximum RF power output. Connect your voltmeter to TP3 and peak for maximum DC voltage.

10. Slightly spread or compress coils L3 and L7 to maximize output power. Power should be at least 4 watts with a 12 volt power source."

That's it, folks. The next step calls for a check of power in the low power position. By the way, there is no mention of a wattmeter in the first five steps of the testing section, which list the items necessary for tuning.

The important point is that there is nothing in any step anywhere in the manual to tell the builder to make any adjustments to L2 and L4 after they are installed. Cecil, I did achieve a nice "resonant" peak on the capacitor when I followed Ramsey's directions. In other words, everything appeared to be fine, on the surface. Anyone building the kit and using the suggested light bulb load would have seen plenty of brilliance. But the kit had low power and high harmonics that way, which the novice builder would have been unaware of.

7/27/94 42/1700 Cecil_A_Moore@ccm.hf.intel.com writes:
>Looks as if the guy who wrote the article in 73 didn't bother
>to read the manual just like you didn't bother to read the followups.

Not so---see above. The manual was followed exactly. I probably would have found the problem sooner except that the other problem (low tripler test point voltages) led me to concentrate my efforts on the triplers instead of the final. (If that sentence doesn't make sense, read my article for the details.)

7/26/94 8/346 jramsey@delphi.com writes:
>Cecil, The manual clearly states to spread the coils for max power output.
>We purposely have the coils wound with a 'tad' too much inductance - it's
>easier to spread the coils a bit than to have to add more turns!

Not exactly correct, as can be seen from above. The manual instructs tuning of L3 and L7, but not L2 and L4.

Hi all,

Our school is interested in creating some detailed maps of the forest in our area. The maps will be used for orienteering (kind of like cross country running through the woods, using a map and a compass to locate checkpoints) They need to show fairly small details, and I wonder what kind of results we could get with simple RDF equipment.

Here's what I'm thinking of using:

Three simple, crystal controlled, low-power (solar?) transmitters located at well-known places on the perimeter of the course. A moveable receiver with a directional antenna, used to find a bearing to each beacon. To locate boulders, downed trees, mudholes and other relatively small features someone would go to them, find the bearing to all three beacons, and later locate the features on a master map by triangulation. I thought maybe a digitized signal-strength value might be a good way to determine the right bearings. (I have some suitable A/D hardware for this already.)

The questions are: (not necessarily in the right order :-)

1. Are there schematics, or better yet PCB artwork for the above tx/rx ?
2. What frequency is generally used for this purpose?
3. Most importantly, how accurate can the results be with a fairly modest outlay of funds for construction?

I'd like to enlist the Science Club in building the equipment, so circuits designed around microcontrollers might be a bit _too_ complex! If there is ftp-able info on this subject, I would greatly appreciate hearing about it. I don't have access to indices of QST or 73, but if there have been articles about such equipment I could probably locate the magazines.

Thanks in advance to all who respond,

Pat Ferrick
Science Teacher, Town of Webb School
Old FOrge, NY

(using K. Down's account temporarily)

ps- we'll also need some mapmaking software eventually, if you know of any (preferably public) sources by all means let me know!

1747. S. California Repeaters

I'm trying to program my HT with the best line up of 2-meter repeaters that I can. What I'd like to know is which repeaters in the southern third of California (San Luis Obispo to San Diego and the coast to the eastern stateline) have the following characteristics:

1. Wide coverage

2. Are heavily used

3. Are open

Our problem in southern California is that we have over 200 2-meter repeaters but most of them have limited coverage or are hardly ever used.

Does anybody have any info?

I would be at least somewhat surprised if your local library would accept
your old QSTs ..... let alone the problem of whether or not anyone
would get around to reading them. The three public libraries and
the university library next door to me (Portland State University)
do not have the hard copies of the older magazines available.....
and very certainly ..... I would contend that the "casual" ham visitor
to your local library is not going to have the kind of access to such
magazines that a campus/library employee might have .... hmmmmmmmm?

Lockheed ARC, at least as I recall in Sunnyvale, CA, is a rather large
club with a club ham shack available ..... something that not all
that many clubs around the country have, eh??????? Although a rarity,
that type of club might be a perfect place to put a bunch of old
QSTs for the members to thumb thru.

So, I continue to suggest that IF you find a library or radio club
willing to take the magazines ..... it might be worthwhile to simply
ask how "accessible" the magazines will be. If they are NOT readily
accessible, then - as I stated before - I suggest you either sell
them (paying money is an incentive to read them), or give em away
to other hams, especially newcomers, who will go thru them and enjoy
them.

Maybe Jeff/NH6IL would like to help ....., BTW, I have some older
Time and Newsweek magazines .... whaddya think, know any libraries
that may take them? ;-)

73 de Sandy WA6BXH/7J1ABV
PS: When I was a newcomer ham at the age of 10, I found an old bookstore near my grandpa's (K7OQY) in AZ and brought back dozens of old QST from the late 40s and 50s - I used to love reading thru them .... still do. I just wish I had access to a research library on a daily basis where I could look thru more, and any time I wanted to, too. ;-)

1751. Re: Computer radio - SoftWave by ComFocus - any good?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-31 18:32:07 UTC
From: scollin@sapphire.win-uk.net
Message-ID: <99@sapphire.win-uk.net>
Source record: 262456
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

I have been developing control software for popular shortwave domestic grade radios for several years now. So it was with considerable interest that I read about the Softwave package (marketed in the UK by Lowe Electronics) in Shortwave magazine. I also heard Johnathon Marks' interview with ComFocus on last week's Media Network and as a result I decided to obtain a copy of the demo of Softwave and try it out.

I must congratulate ComFocus on an excellent product idea. I too have been trying to integrate a station data base into a control package with some of the projects I have done. Softwave takes the whole idea further by integrating the radio more closely with the PC.

I liked the idea of using a DSP in the receiver's IF, having software personalities and including data decoders. I think many of the ideas behind the package are good ones and that the product has a bright future.

On a less positive note, the demo version of the program seemed to be highly unstable on my system and crashed my Windows for Workgroups network. I assume that the program is accessing PC ports used by the network card or is using a resource also used by the network drivers. The SETUP.EXE program did not work at all on my DX2 66 MHz machine: it crashed KNL386.EXE, complained of missing files and crashed the network. On my 33 MHz 486, SETUP.EXE and the main program worked but still crashed the network. The main program completely hung the 33 Mhz 486 computer when I tried the "Communications Receiver" personality and exited inexplicably with one of the "Option" menu items.

General comments: there seems to be a lack of keypad frequency entry. I found the scroll bar for tuning a bit limiting; a spectrum display of signals within the IF bandwidth would be nice.

The idea of a map based data base worked very well, but the demo seemed to lack station details for some parts of the world. The bandplan was for region 3.

I have heard (third hand) that although the radio has a high specification, it suffers a bit from spurious signals when used with a large external antenna.

I suspect that this product is still quite young and that there will be many changes before it becomes stable. Many of the points I have mentioned regarding limitations may only apply to the demo;

they are straight forward for ComFocus to change anyway. The more serious problems with it crashing are probably a result of the radio hardware being missing.

Overall, I would say that I am still interested enough to seriously consider buying one - but not until the bugs have been ironed out.

I have one, and it works ok. As someone else said, it is appropriate for a hamfest, or somewhere close to a repeater. I have used it at local ARES events (like a footrace), and it can be handy. Its principle convenience is that it doesn't poke you in the ribs when carried on your belt.

I would never go anwhere without an alternative (larger) antenna somewhere close by.

David Cook (davidc@lsid.hp.com) wrote:

: I was just reading the write up for the ICOM IC-T21A and IC-T41A HT's in the
: August QST ICOM advertisement. I quote from the ad:

: "Auto Low Power Function - Automatically
: selects 15mW just before battery exaustion
: so you can complete your QSO."

: Hmmm! How many situations have I been in where my battery is about to go
: and I am close enough to the receiving antenna on the other end that 15mW
: of power will do the job. Am I missing something here? 150mW I could maybe
: start to believe.

Actually, 15 mW would do a good job from here to several local repeaters.

Now on HF...

Well, on HF, I am up to 30 states worked with 10 mW, so I wouldn't discount
the low-power claim at all. :-)

It was discontinued because people didn't buy it.

People didn't buy it because it was a piece of <expletive deleted>!

For $400, one could buy an OEM GPS module that outputs the time.

SB DX @ ALLBBS $OPDX.169
Ohio/Penn DX Bulletin No. 169

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 169
BID: $OPDX.169
August 1, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL DX Bulletin, DF4RD, JF2RZJ, LA4LN, SM0TXT & DX-Loggen, F8RU, K4CEF & Southeastern Cluster Group, WB8ZRL, KG9N, VE3OUL and ZS1AFZ for the following DX information.

5W, WESTERN SAMOA. Mako, JF2RZJ, and three other operators will be active from 5W-land from September 9-14th. The four Japanese operators will be active from Apia (Upole Island OC-97). The following callsigns were issued: 5W0JA as JF2RZJ, 5W0HK as JF2GYH, 5W0BL as JH2ABL and 5W0BY as JA2FBY. They plans to be active on CW/SSB/RTTY on 160-10 meters, including the WARC bands. They would like to put an emphasis on the WARC bands for the East Coast and Europe. On the 160 meter band, they will use an amplifier and long wire antenna (inverted L) for JA and stateside. The group will be operating the Hotel KITANOTUSITARA in Apia. QSL via their home calls.

9X, RWANDA. Paul, F6EXV (9X5DX) will be returning to Rwanda early this week. It is uncertain whether he will have time to be active with his seeing to all the humanitarian needs. His QSL Manager still remains F2VX. Also Alex, PA3DZN is on the way to 9X5-land.

C6, BAHAMAS. Just a reminder to work Chuck, KG9N, as KG9N/C6A on Great Abaco Island (IOTA NA-80) from August 3-9th. He will be in the North American Qso Party (1800z Aug. 6 to 0600z Aug. 7). The operation will be mainly CW up 25 KHZ from the bottom of the band. Chuck will try to be on SSB on 14195 kHz around 0300z each day. Also, he will try to be active in the different parts of the General Class bands.

FT/Z, AMSTERDAM & ST. PAUL ISLAND. The DX-Loggen reports Pierre, FT5XJ, from Kerguelen Islands, may make a short visit/operation between July 31st and August 3rd. He will be using the callsign FT5ZF. His favorite frequencies are 21250 and 14226 kHZ (DX net). A QSN report from the Southeastern Cluster Group (Sunday July 31st) showed Pierre working European stations on 14270 kHz around 1223z. QSL via F1NLL.

IS1A/0S1A, PRINCIPALITY OF SEBORGA. The following was sent to OPDX by the from former ITU President, F8RU: Referring to OPDX.168 and what was quoted from the ARRL DX Bulletin on IS1A/0SA operation by Gian-Carlo I1RBJ. I would like to put things straight, Gian-Carlo, did not "return" from the I.T.U Geneva. He phoned the President of 4U1ITU who advised him not to use an unallocated prefix "0S". The I.T.U. only deals with Telecommunications Administrations, not with individuals, therefore had I1RBJ approached the I.T.U on this subject he would have been told to take up the matter with his national Administration, in this case, the Italian Ministry of Post & Telecommunications, (the equivalent of your FCC). From what I have been told, Gian-Carlo I1RBJ took up the matter with the Italian PTT who, apparently, issued him with the IS1 call-sign. I have not seen the license so I cannot vouch for this. The reason for the /0S1A following the IS1A call, it appears to be a result of an objection by the Prince of Seborga, if such a person exists, to the use of an Italian call-sign. As former President of 4U1ITU, I would like to remind my fellow hams that it is forbidden by international regulations to use call-signs that cannot be identified by the I.T.U. Allocation of International call-signs.

JW, SVALBARD. Tom, LA4LN, will sign JW4LN; and Magne, LB3RC, will sign LB3RC/JW from the Western Coast of Vest-Spitsbergen 78 deg N, 14 deg E, from August 1 - 20th. This is a scientific expedition and NOT a DXpedition, but they will be operating on all bands 160-10 meters (emphasis on WARC bands), CW/SSB/digital modes mornings, evenings, when weather is bad, and when not having to chase away the dangerous polar bears! Please make QSOs short, because all operation will be battery/gasoline generator/solar powered.

Suggested frequencies:
CW 1835 3505 7005 10102 14005 18073 21005 24895 28005
CW/USA 3525 7025 14025 21025
SSB 1845 3795 7085 14185 18145 21285 24945 28485
DIGITAL 3587 7037 10147 14087 18107 21087 24927 28087

Please listen for instructions for split frequency operation to be given on the air. Please give your full call once when calling. QSL direct to the respective home calls. Note that the LA4LN Callbook address is wrong! Here are the correct addresses:
JW4LN via LA4LN, Tom Victor Segalstad, P.O. Box 15 Kjelsas,
N-0411 Oslo, Norway.
LB3RC/JW via LB3RC, Magne Nicolaysen, Ostgaards gate 23 B,
N-0474 Oslo, Norway.

N7RO QSL SERVICE CLOSING DOWN! Dick, N7RO, wants to get the word out as soon as possible that he is getting out of the QSL forwarding business. He would like to discontinue the service as soon as possible. There is no word on who will take over, but if anyone is interested, please contact Dick.

V7, MARSHALL ISLANDS. Ken, V73C, has been active on 20 meters (various frequencies) CW/SSB between 2000 and 0400z. He has also been heard on 18146 kHz around 0230z. QSL via OKDXA, P.O. Box 88, Wellston, OK 74881.

XU, CAMBODIA. Sanji, XU7VK, continues to be quite active. If you need Zone 26 for your 5BWAZ, you better work Sanji soon. Sanji said he will be going home to Hungary in early August until mid-September. When he returns, he will bring some CW filters with him to help with the weak low-band signals. For now, he has been heard 80 meters (between 3500 and 3510 kHz) and 14220 kHz between the times of 1000 and 1200z. There is also a report that VS6WV will be in XU-land in late August, but he is not sure how much time he will be able to operate.

ZS8MI QSL UPDATE. Maria, ZS1AFZ, informed OPDX that Christie, ZS1CDK, who recently returned from Marion Island and was active as ZS8MI, has made around 9000 QSOs. Christie has already confirmed half of all the QSL cards received and plans to have all cards QSLed by the end of August.

AN EARLY CONTEST STATION REPORT. Etienne, ZS6YA, will be using a special callsign, ZS94F, in the All Asia SSB DX Contest, September 3-4th. QSL via Etienne Swart, P.O. Box 14, Honeydew, 2040, Rep. of South Africa.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

Can someone give me assistance in locating a list of FTP sites where I can download amateur radio related files? I have looked through the yellow pages and other sources and don't find too many. Thanks.

Bob, KG7WC

Speaking of old ham radio magazines, I've got a collection of QST's
that date from 1947, although I'm missing about 10% of the collection.
Over the years, I've been trying to complete the collection, but have
a hard time finding the biggest gap in my collection: the war years.

If anyone has QST's that date before 1947 and would like to give them
away or even sell them, please let me know. Thanks es 73.

ANARTS meeting

There will be an ANARTS general meeting on Friday 5th August at 7.30 pm. For details please contact Col VK2CTD President on 624-3989, or Jim VK2BQS Vice-President on 6313560, or Pat VK2JPA Secretary on 230 3722 (wk).

Come along to our very friendly and informal meetings, they usually develop into interesting discussions, with tea or coffee and biscuits or better. Perhaps this quieter side of digital activities is for you, with the emphasis on HF digital modes, without the hurry scurry of 2 metre packet. We cover the range, right up to the latest which at time of writing is G-TOR. Who knows what the flavour will be next month?

Hope to see you there.

IPS weekly report
---
22 July - 28 July 1994

Issue No 30

Date of issue: 29 July 1994

INDICES:

Date 22 23 24 25 26 27 28
10cm 78 76 75 75 74 74 75
A 06 08 09 12 05 13 (14 estimated)

SUMMARY OF ACTIVITY

Solar activity was very low all week.

The geomagnetic field at Learmonth (WA) was quiet to unsettled until 27th July when there were active levels 0300-0600 UT, and unsettled on 28th.

Ionospheric F2 critical frequencies at Sydney were near predicted monthly values until local night on 28th when frequencies were 20 per cent enhanced. Spread F was observed during local night on 25th and 27th July, and strong spread F reported on 28th.

FORECAST FOR THE NEXT WEEK (29 July-4 August)

SOLAR: Very low.

GEOMAGNETIC: Quiet to unsettled with active periods on August 3.

IONOSPHERIC: Near normal.

ARLD044 DX NEWS

THE ITEMS IN THIS WEEK'S BULLETIN ARE COURTESY OF THE DXCC DESK, THE OPDX BULLETIN, CHUCK, KG9N, JOE, NJ1Q, BURTON, VP9BP, AND THE CONTEST CORRAL COLUMN IN QST. THANKS.

SVALBARD. TOM, LA4LN, WILL SIGN JW4LN, AND MAGNE, LB3RC, WILL SIGN LB3RC/JW FROM AUGUST 1 TO 20. THIS IS A SCIENTIFIC EXPEDITION AND NOT A RADIO ONLY DXPEDITION. QSL INFO FOR

JW4LN IS VIA LA4LN, TOM VICTOR SEGALSTAD, PO BOX 15 KJELS, N-0411 OSLO, NORWAY. QSL LB3RC/JW VIA LB3RC, MAGNE NICOLAYSEN, STGAARDS GATE 23 B, N-0474 OSLO, NORWAY.

CROATIA. JACKY, F2CW, HAS BEEN WORKING FOR THE RED CROSS IN CROATIA FOR THE PAST SIX MONTHS. HE HAS BEEN ON AS 9A/F2CW, BUT EXPECTS TO RECEIVE THE CALL SIGN 9A5CW SOON. ACTIVITY HAS BEEN MAINLY CW WITH SPORADIC SSB. RTTY, PACTOR AND AMTOR OPERATIONS ARE IN THE WORKS. QSL 9A/F2CW, 9A5CW AND T9/F2CW VIA KC7V.

BAHAMAS. CHUCK, KG9N, WILL BE SIGNING HIS CALL /C6A FROM THE ISLAND OF OABACO. PLANS INCLUDE BEING ACTIVE IN THE NORTH AMERICAN QSO PARTY. HE WILL OPERATE PRIMARILY ON CW 25 KHZ UP FROM THE BAND EDGES, BUT LISTEN FOR HIS SSB ON 14195 KHZ AT ABOUT 0300Z DAILY.

SOUTH KOREA. DEL, HL9DC, AN AMERICAN FROM OHIO, IS ACTIVE FROM WONJU, SOUTH KOREA. HIS LENGTH OF STAY IS UNKNOWN. HE WAS HEARD RECENTLY ON 14025 KHZ AROUND 1200Z. ALSO CHECK THE BOTTOM OF 40 METERS BETWEEN 1100 AND 1200Z. QSL VIA N7RO.

ARUBA. HIRO, JR4PMX, JUN, JH4RHF, AND KUMIKO, JR4DUW, PLAN TO BE ACTIVE FOR ONE WEEK STARTING AUGUST 24. JUN WILL SIGN P40S AND KUMIKO WILL SIGN P40YL. LISTEN FOR THEM ON ALL MF/HF BANDS WITH THEIR CW, SSB AND RTTY. QSL VIA THEIR HOME CALLS.

EGYPT. AYMAN, SU1AY, WAS ON THE 14226 DX NET AROUND 0000Z. QSL VIA OE6EEG.

GUAM. BURTON, KH2/VP9BP, WILL BE ACTIVE FOR THE NEXT TWO YEARS. QSL DIRECT TO BURTON S. PAYNTER, 321 JOHNSON ROAD, NAVAL HOSPITAL, AGANA HEIGHTS, GUAM 96919, OR VIA THE VP9 QSL BUREAU. DO NOT SEND CARDS TO HIS BERMUDA CALLBOOK ADDRESS.

ZD8LII QSL INFO. AD8V IS NOT NOR HAS EVER BEEN QSL MANAGER FOR ZD8LII. QSL ZD8LII VIA G0LII.

THE FIRST RUSSIAN DX CONTEST WILL COINCIDE WITH THE GOODWILL GAMES IN SAINT PETERSBURG, RUSSIA, JULY 30 AND 31. SPECIAL EVENT STATIONS R1GWG, FOR GOOD WILL GAMES, AND R1MVI, FOR M-V ISLAND, WILL BE ACTIVE DURING THE CONTEST.

SUBSCRIPTIONS.

Members are reminded that ANARTS Financial Year commenced on 1st July 1994 and that subscriptions are now due. We have had a freebie for 12 months as a gesture to our members but it could not continue that way for ever.

So please send $10 (you know, the pretty blue note) to our Secretary who will process it under our new system which

should prevent delays and transit problems.

Send to the official ANARTS address at Box 860, CROWS NEST.
NSW. please.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at
VK2RWI.

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI.
Email addresses for the Broadcast Officer are :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from
anywhere in the broadcast coverage area. We know we reach New
Zealand and many South Pacific islands, and we were reaching
as far north as Japan when conditions were right. We are
looking forward to news from your areas to let other amateurs
know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

> Anyone seen products in this catagory?

Some WWV stations have the time encoded (by varying the sounds of
the seconds marks) and this, I believe, is what Heathkit used.

Any computer with audio input could be programmed to listen
to these WWV stations and set the time accurately. That includes
most Macintoshes that have been manufactured recently, and
possibly some less advanced computers.

It would be a good programming project for someone who wants to
do digital signal processing.

From: bradf@beretta.ramp.com
Message-ID: <31hp33$4ts@beretta.ramp.com>
Source record: 262469

I don't suppose anyone knows of a collection of amateur radio
equipment, radios, antennas, keys, or maybe infamous operating
locations/events that might be stored in a digital format?

Besides starting a collection for myself, I'd like to use some
pics to build my html home page here, for the enjoyment of
other Mosaic users.

For those that may not know ... html is the hypertext menu language,
that is used to build many of the graphically presented screens
accessible on the internet these days, with the use of proper
software, such as Mosaic. If you haven't tried it, please do ...
you'll like it :-)

1767. Persieds Meteor shower

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-01 03:30:00 UTC
From: tim.marek@megasystem.com
Message-ID: <215.2759.1441@megasystem.com>
Source record: 262468

Hello fellow VHFers... I, NC7K, will be QRV from DM19 and DM09 in the upcoming Persieds Meteor shower. Primarily looking for 2M skeds, But I will have 50 and 432 Mhz with me as well. Leaving work Mid day Tuesday August 9th Im driving out to a 10,000 Ft. mtn above Austin, NV in DM19. QRV from 03:00Z 8/10 thru 22:00Z 8/11. Then I'll move back to 8,300 FT. Virginia Peak in DM09 where I'll be QRV from 04:00Z 8/12 thru 01:00Z 8/15.
.
QRZ SKEDS... QRZ SKEDS... QRZ SKEDS...
.
Throughout all this I will be QRV 3.818 Nites and 14.345 Days for HF liason. I will take skeds via UseNet, (702)322-4200 Days, (702)972-4722 Nights till 8/8/94. 73s es GL. Tim - NC7K...sk

NOTE: The Effective Sunspot Number for 30 JUL 94 was 27.9.
The Full Kp Indices for 30 JUL 94 are not available.
The 3-Hr Ap Indices for 30 JUL 94 are not available.
Greater than 2 MeV Electron Fluence for 31 JUL is: 2.7E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. A Type II sweep was
reported by the Sagamore Hill and San Vito observatories at
31/1029Z. Shock velocity was estimated at 1500 km/sec. No
x-ray or optical correlation was indicated with this sweep.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at mostly quiet to
unsettled levels for the past 24 hours. The GT 2 MeV energetic

electron flux was mostly normal to moderate. A brief period of high flux readings was recorded early in the period from 30/2100Z to 30/2400Z.

Geophysical activity forecast: the geomagnetic field is expected to be mostly quiet to unsettled for the next three days.

Event probabilities 01 aug-03 aug

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 01 aug-03 aug

A. Middle Latitudes
Active 10/10/20
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 10/10/25
Minor Storm 05/05/05
Major-Severe Storm 01/01/05

HF propagation conditions were normal and good over all regions. Normal propagation will continue through at least the next 72 hours.

------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO DATA AVAILABLE.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>I'm trying to program my HT with the best line up of 2-meter repeaters
>that I can. What I'd like to know is which repeaters in the southern
>third of California (San Luis Obispo to San Diego and the coast to the
>eastern stateline) have the following characteristics:

Brian: When I lived in SoCal one of my favorites was the Catalina Island repeater, WR6AAA (that might not be its current call). It had great coverage - from San Luis to the Mexican Border. Can't recall the frequencies, though (that was 15 years ago - 147.06?). Not sure how the SLO stations made it over Point Conception - maybe hillside property :)

WWV transmits a time code as bass tones (100Hz??), one per second, short or long. You won't hear them on those toy radios, but they're there. A Real Radio(Tm) driving a Klipschorn should do nicely.

Then there's WWVB on 60 kHz that also transmits time code as pulses at 1 bit per second. When I was active in RTTY I wrote a WWVH decoder as a M6800 routine that was called 100/second.

>tough enough. Nobody was in the middle.

Hi Joe, I'll bet the above division correlates to age... and nobody is
going to write to you and say, "I'm in the middle".

>Cecil, I did achieve a nice "resonant" peak on the capacitor
>when I followed Ramsey's directions.

You admit in the article that you were _not_ at resonance at that
time. When tuning a tank circuit, if the variable cap is at either min
or max, dollars to donuts you are not at resonance. My Elmer taught that
to me when I was in high school. ("dollars to donuts" had a lot more
meaning when donuts were $0.50 a dozen). :-)

>7/27/94 42/1700 Cecil_A_Moore@ccm.hf.intel.com writes:
>>Looks as if the guy who wrote the article in 73 didn't bother
>>to read the manual...

My apology, I may have been hasty in the assumption that the SlyFox
manual was just like the FX manual. I haven't seen a SlyFox manual.

The original problem was that based on a prepublication leak of your
article, someone said the SlyFox didn't meet FCC specs, and it does
when tuned properly. I think your review was subjective rather than
objective but I admit to being old-fasioned... real hams don't cry.

1781. Re: feed-forward amplifiers

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-01 09:21:27 UTC
From: ega066@comp.lancs.ac.uk
Message-ID: <CtunBs.L7D@comp.lancs.ac.uk>
Source record: 262483

The problem with feed-forward, and the Cartesian feedback type amps is that it's very difficult to get them working over large bandwidths. While the percentage bandwidths involved in the VHF/UHF bands aren't so high, at HF it's obviously a totally different matter. As far as I know, nobody has applied these techniques to wideband HF transmitters.

The envelope elimination and restoration technique is more appropriate here, and has been in use for many years in broadcast SSB transmission, for example. Here, the AF waveform high-level modulates a non-linear PA which is driven by a 'limited' (i.e. constant amplitude) carrier modulated with the appropriate phase information. The net result is ideally the original non-constant envelope waveform. In practice some distortion does occur - including AM/PM distortion and some feedthrough of the driving waveform, particularly when the supply voltage gets pulled down towards zero.

Of course, if you just stick to CW ....

The following is a QST

A Washington, DC appeals court throws out the FCC's new schedule of assessing fines, a major player in the All-Volunteer testing system decides to cut back and a report on the summer ARRL board meeting. These stories and more on Newsline report number 885 coming your way right now!

(*****
COURT NIXES NEW FCC FINE PLAN

A federal court has rejected the FCC's revised method of assessing fines against broadcast, cable and telephone company licensees who violate commission rules. This legal finding could also impact the agency's ability to enforce the Part 97 Amateur Service Regulations.
By way of background, in 1991, the FCC abandoned its long-standing case-by-case approach to assessing fines against licensees who violate the Communications Act. In its place, the agency agreed to set "Base Forfeiture Amounts" of fines for offenses in most of the services that it oversees including those encompassing personal communications activities.
A telecommunications trade organization known as the United States Telephone Association challenged the fine schedule on grounds that the FCC adopted the new rules without notice and without allowing interested parties to comment. The U.S.T.A. claimed the rule was unfair because the fines were higher than those assessed against broadcasters and cablers. For example, the revised fine schedule called for broadcasters and cable operators who make untruthful claims to the FCC to be fined $20,000, while telephone companies would face a fine of $80,000. Some "Base Forfeitures" in the Amateur Radio Service were set at $8000.
According to news reports, on July 14, the Circuit Court of Appeals for the District of Columbia Circuit in a 3-0 decision turned down the new FCC rules. In fact, the court went so far as to say that the agency knowingly failed to give all interested parties the opportunity to comment on the policy change before it was adopted.
The court's rejection of the fine schedule could even jeopardize the governments new schedule of punitive forfeitures

against broadcasters who violate equal employment opportunity rules. This is because the FCC adopted new E.E.O. fines without first allowing interested parties to comment on the regulations. Already, the National Association of Broadcasters has already sent a letter to the FCC asking that the E.E.O. fine schedule be scrapped and all outstanding assessments be canceled. Several hams who are currently the target of FCC fines based on the portion of the new Base Forfeiture Schedule are already saying that they too will demand the actions against them be canceled as well.

And this gives the FCC has only three possible options. It can appeal the Circuit Court findings to the United States Supreme Court seeking a reversal of the lower court decision. It can revert to its pre-1991 monetary forfeiture schedule and issue a Notice of Proposed Rule Making on a new schedule of fines. Or it can abandon all regulatory enforcement of the rules it creates and place the burden for disciplining communications regulatory violators on a government agency with investigatory and prosecutorial power such as the Department of Justice.

The bottom line appears to be this. The FCC may now be reluctant to assess fines for any but the most egregious regulatory violations. This is because court decisions in matters of communications made on constitutional ground are normally considered relevant and enforceable in all commission governed services including Personal Communications.

(*****

MAJOR MILESTONE FOR HAM RADIO LEGISLATION

The ARRL's House of Representatives Joint Resolution 199 passed a major hurdle when key provisions were included in H.R. 4522, the FCC Authorization Act of 1994. This, during markup by the Telecommunications Subcommittee of the House Energy and Commerce Committee on July 14. Sponsored by Rep. Mike Kreidler House Joint Resolution 199 earlier gained 245 other Congressional co-sponsors as a result of hard work by the Amateur community. The next step is action by the full Energy Commerce Committee, and then consideration on the floor of the House. Companion legislation awaits action by the Senate Commerce Committee. If the Senate bill differs from the House bill, an additional conference committee decision might be necessary before floor action.

The bill urges the FCC to continue and enhance the development of amateur radio as a public benefit by adopting rules and regulations encouraging the use of new technologies. It also urges the Commission to make reasonable accommodations for the effective operation of amateur radio from residences, private vehicles and public areas, and spurs all levels of government to facilitate Amateur Radio as a public benefit.

The legislation also provides for a one time vanity call sign fee of 150 dollars. The previous annual fee provision was deleted

in favor of a one time application charge, staving off the threat of an annual fee for all amateurs. In addition, ARRL lobbied to ensure that the fees go to FCC rather than the general fund of the United States Treasury.

(*****
GREAT LAKES V.E.C. CUTS BACK

One of the nations most respected VEC's is severely curtailing its operation.
"The Great Lakes V.E.C. is not dead and gone as some have rumored. But is simply downsizing." That according to Great Lakes V.E.C. Administrator, Jim Geogias, W9JUG.

"I've been in this testing area since 1985. And we were to third V.E.C. assigned under contract by the F.C.C. I decided to spend a little bit more time with my family. And my job is very very time consuming. Just guide my life a little differently." Jim Geogias, W9JUG.

This doesn't mean however that the Great Lakes V.E.C. is dropping all national testing.

"We have a couple tests coordinated in August. In Los Angeles, we have several in the Chicagoland area. For August, not on a regular every month basis."

The bottom line for Jim Geogias, W9JUG, however is the fraudulent use of the handicap provision found on form 610's.

"This handicapped provision was put in place for the severely handicapped. It says severally handicapped.
I have this friend who has C.P. and can't write. And really has difficulty with the morse code. This is what this was designed for. This wasn't designed for a person who has a little bit of trouble copying, mastering morse code. We all have. I spent years trying to get twenty words a minute.
It is really unfair. I really think it is a rip-off for all the ham operators who spent all those nights studying morse code. And here these guys can convince their doctor or what ever and get this certification. They get twenty words a minute certification extra class examination without knowledge of morse code." Jim Geogias, W9JUG.

Geogias decision to cut back on the operations of the Great Lakes VEC leaves the W5YI and ARRL as the major players in the all-volunteer testing system.

(*****
ARRL BOARD OF DIRECTORS MEET

The ARRL Spectrum Committee has been asked to study the bands between 420 MHz and 300 GHz to enable a better understanding of

present and future activities in this region of the spectrum, giving priority to those bands subject to spectrum reallocations by the government. This was just one of many important actions affecting all radio amateurs by the ARRL Board of Directors meeting on July 15 in Rocky Hill, Connecticut.
In another important action, the Board commissioned a new RF Safety Committee to advise the Board and staff on safe operating practices for the development of policy and educational methods and materials. Members will be personally selected by ARRL President George Wilson, W4OYI.
The ARRL staff was commended for developing and implementing strategies for responding to the 13-cm band challenges posed by the government reallocation plans. The Directors also noted the selection of ARRL Technical Relations Manager Paul Rinaldo, W4RI as a member of the United States delegation to International Telecommunications Union's Plenipotentiary Conference. The board also congratulated Paul for his excellent service as an international representative of Amateur Radio.
The Contest Advisory Committee has been told to study the possibility of expanding the scope of the 10 GHz contest to include all bands above 10 GHz, and report back to the Board at its 1995 Annual Meeting. The committee will also study the possibility of adding a club competition to all VHF/UHF contests and sprints. The committee will also consider establishing a Summer Sprint series.
The Board selected Peoria, Illinois, as the site of the 1996 National Convention. The convention will be held September 13-15 under the sponsorship of the Peoria Area Amateur Radio Club. And Dallas Texas was selected at the site of the 14th annual ARRL Digital Conference to be co-sponsored by the Tucson Amateur Packet Radio Corporation and the Texas Packet Radio Society in September 1995.
The full story of the Board meeting will appear in the September issue of the ARRL's "QST Magazine."

(*****
A WRAP-UP ON SAREX STS-65

STS-65 set a new record by staying in orbit for nearly 15 days. It also recorded the 14th successful mission for SAREX, the Shuttle Amateur Radio EXperiment.
Mission Commander Bob Cabana, KC5HBV, and Mission Specialist Don Thomas, KC5FVF, racked up contacts with hundreds of students in 14 schools located all over the world. When they were not talking to kids, the packet mode of their 2 meter radio was used to make several thousand confirmed contacts.
They did all this while flying for the most part in a "gravity gradient" attitude ... tail of the space ship pointed toward earth. Since the antenna is in a cabin window up front, this meant operating under a handicap but somehow the signals came through loud and clear at critical moments.

Cabana handled most of the school contacts. He told students, many of whom want to be astronauts or engineers in the space program, to "Study hard, especially in Math and Science" and not to give up no matter how hard the studies.
Among the schools were The Sacred Heart Academy, in Honolulu, the Fronhofer Realschule, in Inglestadt, Germany, and the Tatebayashi Children's Science Exploratorium in Gunma, Japan, where Japanese Payload Specialist, Dr Chiaki Mukai, was obviously thrilled as she spoke in Japanese ... and when one of the students asked about food, she proudly mentioned that she had made a Japanese dinner for the crew of the spacecraft Columbia the night before. All major Japanese Television and many radio stations covered that contact.
Stateside contacts were equally successful. For example, at the West Oak High School, in Westminster, South Carolina, a local radio station carried the session live and an estimated 10 thousand people tuned in.
Most of the school groups were contacted using AMSAT's telebridge system. An international network of amateur ground stations relayed through a phone bridge donated by Darome Telecommunications in Chicago, constituting one of the most effective demonstrations of ham radio traffic handling ever assembled.
Next up? STS-64 is scheduled for launch on the 8th of September. The Commander, Dick Richards, KB5SIW, also flew on STS-50. Blaine Hammond, KC5HBS, and Jerry Linenger, KC5HBR, will round out the crew of licensed amateurs aboard the shuttle Discovery.
Many say that SAREX operations like this are the very best!

(*****
BARRY GOLDWATER SAYS

Amateur Radio's elder statesman, United States Senator Barry Goldwater, K7UGA, appeared on the talk show Ham Radio & More on June 26, and was sensational as usual. This, according to the show's producer, Len Winkler, KB7LPW. Senator Goldwater answered callers' questions ranging from MARS to SDI military hardware. Much praise was given to Senator Goldwater for his time given to the country, Winkler said.
Some quotes of interest included his support of the no-code license, and he said that since code is outdated and not now widely used in the military today, he believes the time has come to do away with the code requirements, even though he thoroughly enjoys code and can be found on CW many times each week. He also believes that "our" ability to handle national emergencies is justification in itself for our existence, and he is very opposed to charging for amateur licenses, Winkler said.
"Ham Radio & More" can be heard Sundays at 6 PM Eastern Time on the Talk America Network in 23 cities and via satellite on Spacenet 3, transponder 9, 6.8 Mhz audio.

(*****
DUKE CITY HAMFEST

On the convention scene, word that the 1994 Duke City Hamfest takes place at the Albuquerque National Guard Armory in 600 N. Wyoming Boulevard in Albuquerque, New Mexico on Saturday August 20th. The event will feature technical sessions on a variety of topics, VEC administered ham radio exams, an ARRL Forum, prizes and the hospitality of New Mexico that is quickly making this once tiny show into one that dealers and smaller manufacturers are traveling great distances to be a part of. Look for talk-in on the 147.10 & 147.15 MHz repeaters. This is one of the friendliest ham radio events held in the mountain states.

(*****
VHF CONFERENCE

Also, the 20th annual Eastern VHF/UHF Society Conference will be held August 26 to 28 at the Quality Inn and Conference Center in Vernon, Connecticut. A hospitality room opens at 4 PM Friday the 26th; registration and formal talks and demonstrations take place on Saturday, followed by door prize drawings, pre-amp noise figure measuring, and an evening banquet. Sunday events include a swap meet and antenna measuring, beginning at 8 AM. Proceedings of the conference will be published jointly by the society and the ARRL. Anyone wishing to contribute a paper to the conference should contact Ron Klimas, WZ1V, 458 Allentown Road, Bristol Connecticut 06010.

(*****
.52 BEACON

Speaking about VHF matters, W1NZ reports by packet that he has a half watt modulated cw beacon on 146.52 in Onyx, California. Orrin says that it can barely be heard 30 km from its site but tropo might make it occasionally audible elsewhere in the United States. If you hear it, please send your QSN reports by packet to W1NZ at WA6YBN or U.S. mail to P.O. Box 99, Onyx, CA 93255. Be sure to include the text what you copy plus how often the beacon is going off, This, as a check that really are copying it. Orrin will QSL reports that he receives.

(*****
DX

In DX, word that J5UAI is now 8P9HB and on the air from Barbados. He is said to operate CW, SSB and RTTY. You can QSL via NW8F.
Also listen for DK7PE on the air as TN0CW from the Congo. He has been worked from New England on 1.827 MHz at 02:10, 03:45 and 05:00 UTC. Also on 3.505 MHz at 02:30 and 03:30 UTC.
Finally, FT5XJ, operates RTTY from Kerguelen Island around 14.085 MHz between 12:15 and 12:45 UTC. QSL this operation

via F5NLL or F1NLL in the callbook.

(*****
ARRL ADOPTS MODIFIED ROVER RULES

The ARRL Awards Committee voted unanimously to accept a recommendation to modify rover category rules for the January VHF Sweepstakes, June VHF QSO Party and September VHF QSO Party. The new rules are far to complex to present here, but will be published in an upcoming issue of QST Magazine. They can also be download from the ARRL's Field Services bulletin board or from the ham radio newsgroups on the Internet.

(*****
NEW JOB FOR K3ZJ

A word of congratulations to a longtime friend of Newsline. To Dave Siddall, K3ZJ who has been named Legal Advisor to newly sworn in FCC Commissioner Susan Ness. Dave started with the FCC's Common Carrier Bureau in 1985 following a highly successful career with the Library of Congress. From 1988 to 1991 Dave served with the FCC's Mass Media Bureau before being named as Chief of the Frequency Allocation Branch in 1991. An active DXer, Dave and his family live in Great Falls, Virginia.

(*****
CINDY FOR HRH

A word of congratulations to video producer Rich Moseson, NW2L on the selection of his video "Ham Radio Horizons" as the bronze medal winner in the Association for Visual Communicators' 1994 Cindy awards competition. The video was produced by Rich for CQ Communications. It won in the "public service and information" category. How to it feel to know that you are the recipient of such an honor?

"It's always nice to be recognized by your piers for doing something very well. It was particularly gratifying in this case because Ham Radio Horizons is intended for the general public. Not just for hams. So, the fact that it was understood and appreciated by people who, many of whom are potential hams, I think speaks very well of the program and the fact that we are doing what we set out to do with it." Rich Moseson, NW2L.

The Cindy awards honor outstanding productions in all fields of non theatrical programming. Ham Radio Horizons was written, produced, and directed by Rich. NW2L also the ARRL Northern New Jersey Section Manager, is a member of the league's volunteer Public Relations Committee and a regular contributor to Newsline. Now that he has won such a prestigious honor, we asked Rich what he plans to do next:

"Well of course, I'm going to Dayton!" Moseson, NW2L.

Well, you didn't expect him to say he was going to an amusement park, did you?
Back to being serious for a moment, we should add that the 1994 Cindy awards were presented at the recent Infocom trade show in Los Angeles.

This thread is further evidence that you don't need a beam up on a tower and a footwarmer PA to participate in this hobby. Which is also why (in reference to a previous thread that was recently put to death) it should be no surprise that an Isoloop antenna can be an effective one.

Ok, this is the kicker, forgetting multipath for the moment, about
the best bearing you are going to be able to get with a handheld
VHF yagi antenna is about +/- 8 degrees. That's going to leave a
rather large positional uncertainty if your woods are more than a
few hundred feet across. Using differential time of arrival methods,
or interferometer methods, you can get that error down to under 2
degrees at VHF, barring multipath. If you don't have line of sight,
you will have multipath, and that adds another layer of confusion
which will open your error band back up, perhaps drastically.

Using millimeter microwave signals, and microwave dish antennas, you
might be able to get pointing errors down to 0.5 degree, again neglecting
multipath. But that's pretty impractical as a high school project.

If you use VLF signals in the 160-190 kHz band, and very precisely
synchronized modulation of all your reference transmitters, you can
do pseudo-LORAN line_of_position navigation. This can give you a
positional accuracy of better than 100 meters over a modest area,

a few square kilometers. In fact, you can use an ordinary LORAN receiver to give you latitude and longitude of the receiver accurate to within about 600 meters. Or you can use a GPS receiver to get a civilian positional accuracy of 100 meters, and with a differential receiver on a known benchmark, you can reduce that error down to a few centimeters. That's the way USGS surveyors do it now to generate topo maps.

Your best bet for home construction is to try to do line of position navigation at VLF. If you can generate and measure pulses with a 300 nanosecond rise time, you can locate yourself to within 100 meters. A way you can do this is to build 2 or 3 pairs of VLF transmitters and modulate them with a square wave from one shots which are triggered by a master signal transmitted to all the stations by a timing reference transmitter on another frequency. You can then measure the time of arrival of the pulse rising edges from pairs of your stations and derive lines_of_position. Do this with two or more pairs of stations oriented roughly at right angles, and the intersection of the two LOPs will be your location.

One watt Part 15 transmitters will likely easily cover the area you want to map. The receiver can be a simple TRF design, and you can use a calibrated oscilloscope to measure time of arrival. This is a bit ambitious as a high school project, but probably doable. Anything else you could build would be far less accurate, and you'd be far better off using chains and a theodolite.

>about land fill... that's it!

The Georgia Tech library has QSTs going back to the 1920s. I often
browsed them on boring afternoons at the library when I was a student.
(And no cracks about them being *current* issues then.)

As for doctor's and dentist's waiting rooms, have you ever looked
at the dates on some of the National Geographics piled in those
places? 1960s vintage QSTs would be downright modern by comparison.

1787. VE3ONT adds 50 MHz EME

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-01 15:04:01 UTC
From: MOWE@SLUMUS.STLAWU.EDU
Message-ID: <01AUG94.11952464.0011.MUSIC@SLUMUS>
Source record: 262511

VE3ONT Adds 50 MHz EME

As a result of discussions at the recent meeting of the Central States VHF Society, the Toronto VHF Society (VE3ONT) has added 50 MHz to the list of bands to be used in the upcoming EME contest. 50 MHz will on the air on a non-interference basis simultaneously with 1296 MHz on Sunday of the first EME contest weekend (see schedule below).

VE3ONT will use the 46m (150') dish operated by the Institute for Space and Terrestrial Science at Algonquin Park (FN05xw). On 50 MHz, the antenna will be linearly polarized, and output power will be 1 kW.

UTC Date VE3ONT TX freq listening range approx. times

Oct 29 432.050 MHz 432.050 - 432.060 0645 - 1815 UTC
Oct 30 1296.050 1296.050 - 1296.060 0754 - 1844
Oct 30 50.100 50.100 - 50.105 0754 - 1844

Nov 26 144.100 144.100 - 144.110 0538 - 1645
Nov 27 144.100 144.100 - 144.110 0646 - 1713

Because the Algonquin dish has a 9 degree lower elevation limit, stations with horizon-only antennas in eastern North America will have a limited chance to work VE3ONT. We request that az-el capable stations in Europe and North America delay their QSOs with VE3ONT until after moonrise/moonset windows. This will allow the many horizon-only stations a better chance of making an EME QSO during the limited time available.

Link budget calculations show that 50 MHz stations with 10 dBd (6 elements or so) beams and 1 kW should be able to work VE3ONT off the Moon; smaller stations are urged to try as well.

Use of the dish at the Algonquin Space Complex is always subject to last minute preemption for non-Amateur purposes.

QSLs with an SAE to Dennis Mungham VE3ASO, RR 3, Mountain, Ontario, Canada, K0E 1S0. Reception reports are also welcome. Send your log to the ARRL.

For further information contact Peter Shilton VE3VD, (905) 774-8766. Latest developments will be provided at the International EME Conference, Gottskars, Sweden, August 26-28.

Message-ID: <9.1267.4926.0NEC24FD@dkb.dk>
Source record: 262499

I'm very interested in receiving weather fax and satellite/press pictures etc. using my PC, but don't know where to start!

If anybody can help in any of the following areas it would be much appreciated.

1. What type of radio/receiver do I need to buy? Models, price etc. I believe the frequencies in question are between 0 - 20Mhz?

2. What kind of Modem do I need? I've heard that they're relatively cheap to make, but I'm no electronics wiz. Can I buy one?

3. Software - is there any shareware software available that I could try out, to view these faxes/pictures?

4. Is it all legal?

5. Is there a FAQ anywhere on the Internet that I could download on the subject?

Thanks in advance.
Graham.

Help!

I am new to the world of ham radio, and want to get started. I am thinking of purchasing a handheld unit, and have just about fallen in love with the Alinco DJ-580T. It is a dual band 2M/440MHz unit.

Before I go out and fork out $380 for this thing I want to know a few things: Is Alinco any good? Is there anything the Alinco does not have that I might miss if I start using Ham radio frequently? The Alinco comes with 40 memory channels total for both bands. Is that enough? Should I go up $80 more and buy a Kenwood radio instead with more memory channels?

Anyone out there currently using the Alinco DJ-580T? I'm thinking of making a purchase in the next few days, so prompt replies will be appreciated.

Thank you.

Mike, No callsign yet.

I was chatting on 10m with my friend Kent back in 1979. A few miles apart, he was using a light bulb (his dummy load) as an antenna. We were both located in Pleasant Hill, about 30miles from San Francisco. A station from Kentucky broke in, and gave us both excellent signal reports.

Yup, light bulbs are pretty leaky :-)

+
+ I have a collection of service information and literature dating back
+ to the 1920's. I will be happy to assist those needing copies of
+ out-of-copyright information for specific makes and models of
+ receivers, transmitters, test equipment, etc..
+
+ The collection spans commercial, amateur, and military surplus gear of all
+ types. Unfortunately I have not taken the time to catalog all this
+ information, but it is logically filed by make, model, etc.
+
+ If you need service information for a specific piece of equipment,
+ (and I have the information in my collection) I will research and copy
+ it for you. Cost will vary depending on the time required to find the
+ information and the amount of pages to be copied. I estimate 10 pages
+ or less at $1.00/page including US postage. I will quote on larger
+ manuals.
+
+ This is NOT my career or a business. Any requests must be prepaid or I will
+ ship COD at additional postage costs.
+

Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.7 05/28/94 14:31:40
Changes: List now in 2 parts, Ham origin moved to FAQ

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.
Some of the more amusing are described in the list of Frequently Asked
Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as
one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or
designing TCP/IP packet networks, such experimentation has historically
spilled over into the mainstream such as was the case with Edwin
Armstrong, who developed the regenerative oscillator and FM radio, or
General Curtis LeMay (W6EZV) who was instrumental in making Single-
Sideband the communications standard for the Strategic Air Command
(1947-1992, now reorganized into a joint command called USSTRATCOM) and
eventually the U.S. Air Force. Although packet-switching techniques
originated from DARPA (Defense Advanced Research Projects Agency) and
the ARPANet, no one can deny the tremendous influence that amateurs
have had in demonstrating the viability of TCP/IP and AX.25
communications via radio links. The efforts of AMSAT (the Amateur
Satellite Corporation), including the development of many ham satellites
and the low-orbiting Microsats (communications satellites no bigger than
a breadbox that use store-and forward packet techniques), have certainly
advanced the state-of-the-art in communications, one of the defined
purposes of the Amateur Radio Service, as recognized by international
treaty.

Since in many cases hams are writing "the book", there is often no
"book" or other established reference for a beginner to refer to.
Traditionally, information has been passed on from ham to ham via word-
of-mouth. Like many of the traditional crafts, a variation of the
Master-Apprentice system has emerged, the Elmer-Novice relationship.
```

Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@unomaha.edu, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-M]" and "Amateur Radio Elmers Resource Directory [N-Z]." Since the list is cross-posted to rec.radio.amateur.misc, rec.radio.info, rec.answers, and news.answers on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp.cs.buffalo.edu /pub/ham-radio/elmers*
rtfm.mit.edu /pub/usenet/news.answers/radio/ham-radio/elmers/*

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/a-m
send usenet/news.answers/radio/ham-radio/elmers/list/n-z
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use.

(I'd appreciate feedback on whether or not you find them useful,
though.)

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites, all at standard port 70:

cc1.kuleuven.ac.be
jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl

see also comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available
from the following WWW site:

URL: http://www.cis.ohio-state.edu:80/hypertext/faq/usenet

under pages:

radio/ham-radio/elmers/admin
radio/ham-radio/elmers/index
radio/ham-radio/elmers/list/a-m
radio/ham-radio/elmers/list/n-z
radio/ham-radio/elmers/diff

see also comp.infosystems.www

7. Wide-Area Information Service (WAIS): The latest copy of the list
should be available from the WAIS server at rtfm.mit.edu (standard port
210) in database "usenet."

see also comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for
making this service a success.

W. David (Dave) Paperman WQ5Y

wpaperman@msmail.his.tch.tmc.edu

P.O. Box 7039
Cut 'n Shoot, TX 77303-0039
(H) +1 713 592-8636 (6pm to 9:30pm Central Time)
(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back
to the 1920's. I will be happy to assist those needing copies of
out-of-copyright information for specific makes and models of
receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all
types. Unfortunately I have not taken the time to catalog all this
information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment,
(and I have the information in my collection) I will research and copy
it for you. Cost will vary depending on the time required to find the
information and the amount of pages to be copied. I estimate 10 pages
or less at $1.00/page including US postage. I will quote on larger
manuals.

This is NOT my career or a business. Any requests must be prepaid or I will
ship COD at additional postage costs.

Terrence R. (Terry) Redding WB5LMJ

DOMAIN: terry%red@lawton.lonestar.org
UUCP: . . . !rwsys!lawton!red!terry
PACKET: WB5LMJ @ WB5MJS.OK.USA.NA
Voice 405 536-8822, Ben's Place (Benjamin Franklin) BBS 536-6988 9p to 6a
PhD candidate, University of Oklahoma in Adult and Higher Education
Educational Advisor, American Radio Relay League
221 SW Crystal Hills Drive, Lawton, Oklahoma 73505

I am primarily an adult educator conducting research in self-directed
learning. I have been involved in the following activities:

- Teach licensing classes, since 1974.
- Organize clubs, Stuttgart Amateur Radio Club, Panama Canal Astronomy
Club, Lawton Astronomy Club.
- Public speaking and publish on growth in volunteer organizations,
marketing adult and higher education and teaching amateur radio
courses.
- Research in adult learning theory, adult motivation and organizational
theory.
- Conducted a SAREX activity that involve seven communities, 21 schools
and 3,000 children.

I am primarily interested in assisting amateur radio clubs grow.

WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively
involved in its testing. I'm the author of OrbitDRV (the tracking TSR
that comes with InstantTrack) and a number of other InstantTrack
auxilliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America)
operates the Internet host AMSAT.ORG to provide for efficient
communications between people interested in the amateur satellite
program. At this time two services are provided: a message remailing
service and a mailing list service.

In the future, an archive of files will be accessible by anonymous
ftp or possibly by email. In the meantime, check the host ucsd.edu
by anonymous ftp for AMSAT-related files. Consult your local guru
for help on using anonymous ftp.

The message remailing service permits users to send each other mail
on the Internet without keeping track of each other's Internet
address. The remailing service allows each user to receive mail sent
to the address callsign@amsat.org, where callsign is that user's
amateur radio callsign, or other unique identifier. Mail sent to
that address will be routed first to the AMSAT.ORG host at UCSD in
San Diego, then remailed from AMSAT.ORG to the network address
specified by the user. In most cases, this process delays the
message by only a very few minutes.

The mailing list service groups subscribers into mailing lists to
receive certain types of messages. There are public mailing lists
available to anyone, and private mailing lists available only to
certain people (for example, AMSAT Board of Directors members or
PACSAT command stations). Currently the following public mailing
lists exist:

ANS AMSAT News Service

This mailing list carries official news releases from
the AMSAT News Service. These messages are posted in
a form suitable for direct posting to a packet radio
BBS system. Each message contains a Bulletin Identifier
(BID), which permits the message to be introduced into
the packet network at many places without resulting in
duplicate bulletins at any BBS. The primary purpose of
this mailing list is to distribute ANS bulletins for
redistribution (via the packet net or on AMSAT voice

nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive

2. Your callsign, if any

3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Conway Yee N2JWQ
yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous ftp as:

mipg.upenn.edu:/pub/yee/rptr010.Z

As far as I am aware, all the data is freely redistributable and my intent is to make sure it stays that way. For this reason, I have applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and is not limited to the US. This reflects the intent to make this directory universal.

Contributions of data may be made by anonymous ftp to mipg.upenn.edu:/pub/yee/uploads or via email to yee@mipg.upenn.edu. The data format has not been changed from the old format so contributions that you were planning to make (prior to my recent troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

John Ackerman AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

(See also Bob Nielsen for more information about TAPR)

++

David Andrews ZL2SX

andrews@kai.ee.cit.ac.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

++

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there. SCO-Unix tcp/ip and sendmail coming soon!

ampr.org IP Coordinator for California - Los Angeles County (44.016.xxx.xxx)

Hardware, software and wetware questions answered either with correct answers or the name of someone who does know.

To contact: J. Angus PO Box 4425 Carson, CA 90749-4425 USA
Or Phone 1 (310) 324-6080 all day monday, 7 am - 10 am tuesday through friday, 7 pm - 11 pm tuesday through thursday.

Jay Appell --> KA1SNA

1976-1978 FCC Personal Users Radio Advisory Committee
Task force for rules Rewrite Citizens Radio Service
Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals in amateur radio. The first manual was the DJ-590 and subsequent manuals included the 560,580 and 600 for Alinco. My contacts in the amateur radio community have helped other amateurs to know more about products, hidden features and new product offerings. The BBS will now included the latest info on YEASU and ALINCO products. If you have a product that you wish to have evaluated for the general amateur community, please contact before sending.

If you have questions with regard to customer service at these companies, please forward to me and they will be passed to the company contacts.

* Rich Bono IMRICH UUCP:rbono@necis.ma.nec.com *
* (508) 635-6300 NM1D AMPR: nm1d@nm1d.nh.usa.noam *
**/

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook
with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available from wuarchive.wustl.edu under
/mirrors/msdos/hamradio or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

Scott Ehrlich, Amateur Radio Callsign: WY1Z
How to reach me: wy1z@neu.edu [Internet], wy1z@wa1phy.ma [Packet]
Boston ARC FTP archives: ftp oak.oakland.edu /pub/hamradio
Boston ARC Web page: http://www.acs.oakland.edu/barc.html

I've played around with Mac and PC hardware, as well as dabbing a
little with DOS, UNIX, MacOS, with a tad of VMS operating systems.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives
with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

All ARRL bulletins are archived on the anonymous FTP site of
oak.oakland.edu in the Boston Amateur Radio Club FTP area:
/pub/hamradio/w1aw-list/

A mirror of all files available from the ARRL info server is also
available: oak.oakland.edu:/pub/hamradio/arrl/infoserver/
Programs mentioned in QST are in
oak.oakland.edu:/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:
oak.oakland.edu:/pub/hamradio/docs/newsline/

Mike Ardai, n1ist@netcom.com, runs the following Boston ARC mailing lists:

newsline-list (Amateur Radio Newsline)
w1aw-list (ARRL Official Bulletins)
letter-list (ARRL Letter)
ky1n-list (KY1N VEC listing, Local Boston area VE sessions)
barc-list (local Boston-area stuff)
barc-races (again, local)

fieldorg-l (ARRL Field organization discussions)
ham-tech (Untamed technical discussions about the hobby)
fox-list (local Boston stuff - T-hunting)

To join any or all of the above:

Send a message to: majordomo@netcom.com
In the body of the message, type: subscribe list_you_want

The Club also has a World Wide Web Home Page. The address is:
http://www.acs.oakland.edu/barc.html

You will need lynx, www, or Mosaic to view it. Ask me for more details
about this.

Radio Frequency Interference (RFI) matters
Equipment Testing

I want stories about automotive EMI problems, dealings with dealers,
and, if possible, solutions. I plan to forward these to my contact at
the Society of Automotive Engineers (SAE).

If anyone knows the *right* people at any particular company, I want
to know. I am also pursuing (via the SAE) more official channels.

EMI/RFI Resource List and RFI Tips package available. A business
SASE with 98 cents postage is appreciated. Electronic versions
available soon. Please specify the desired documents in your
correspondence.

The FCC has released the results of a telephone interference survey
just completed.

If you would like a copy of the survey, which includes a list of
telephone models checked, send an SASE with two units of first class
postage to the Technical Information Service at ARRL HQ. Alternatively,
you may obtain an electronic copy from the info server below.

Many amateur radio informational documents (including EMI/RFI files) are
also available from the ARRL info server. Send E-mail to info@arrl.org
with the word "HELP" in the message body.

++

Steven M. Knapp KA9QOA Computer Engineering Senior
sknapp@iastate.edu Vice President Cyclone Amateur Radio Club
Iowa State University; Ames, IA Durham Center Operations Staff

A few members of our ham radio club were interested in helping out.
Since our turnover is usually 4 years or so (graduation is a horrible
thing), I thought it may be difficult for us to keep the list up to
date. I thought that by creating a local mailing list called
"elmers@iastate.edu" we could add or remove people as need be. There
would always be at least one person receiving mail on that list,
usually more! Even after I graduate, this list will be maintained
allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience,
much repeater experience, in addition to a considerable background in
theory, as many here are electrical engineering or computer engineering
students. If a question can not be answered by the readers of the list,
there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local
disabled hams (or hams to be) get on the air. But anyone local who
needed help would find a group at their door ready to work.

(song lyrics deleted)

Well, I think you've made the first extra-terrestrial Elvis "sighting" <g>

The song is "In the Ghetto" by Elvis Presley. Apparently it is quite
popular on Jupiter these days. <g>

Seriously though, I'd check with local radio stations. Probably a harmonic
or something picked up in the audio circuits.

1809. SWL QSLs and the bureaus

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-01 19:57:56 UTC
From: levin@bbn.com
Message-ID: <LEVIN.94Aug1155756@cassandra.bbn.com>
Source record: 262512

I usually get at least one or two SWL QSL cards with each incoming batch. They have SWL id's where one might expect a call sign to go, and the numbers fall withint the ITU assignments for the country of origin - for instance a card from France might have something like "F123ABC".

So, since I'd like to QSL these people too, I want to know:
(a) Will the the ARRL Outgoing Bureau handle them? and
(b) Will the intended recipient's country's incoming burea handle them?

I sent the last one direct, but that could get expensive if I start getting a lot of these (yeah, that's so likely).

Thx / JBL

Greetings:

I was talking to a guy that did not want to become a HAM because
he fears that he can not talk to his brother in Dallas while he lives
in Houston. He told me that it is to close for a skip and to close for
line of sight and no repeaters around. Because I'm not from Texas,
I have no clue what I can recommend to that poor guy.

Is there some kind Texan soul that can give me some ideas on how this
can be done?

BTW, I'll be around the Austin area by the end of this year, how's the 2meter
activity around town??

From: mikewood@mercury.interpath.net
Message-ID: <31jn0p$h24@mercury.interpath.net>
Source record: 262509

I'm in need of a service manual for a GE MASTR II High Band Repeater.
Also would like any info on sucessful conversion from 155 MHz to
145 MHz amateteur band (preferably without any compromise of
receiver specs.) Is a switch from low side to high side injection
necessary?

GE Model #s are KT49J (tx) and ER64A (rx).

Please email if you have an extra manual for sale or info on conversion.

Also , we're having trouble finding a good 6-cavity duplexer for
the 2M band. Apparently there's a shortage of these on the surplus
market these days.

Thanks,

1815. INFO WANTED: Yaesu FT-530

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-01 21:01:51 UTC
From: i9261739@wsuaix.csc.wsu.edu
Message-ID: <CtvJr3.Mr@serval.net.wsu.edu>
Source record: 262520

Hi, it's me again.

I got lots of replies to my last query about the Alinco, and now I'm leaning towards maybe a Yaesu. Anyone have any horrible experiences with this radio?

I found it for $435. That a good price?

Thanks...
Mike

Hi Brian,

As you can see, I'm not from California, but I have a recomendation. A few weeks ago we were on vacation in the L.A. area, and had our radios along -- that's my son and I (me - N9XDC, he - N9XDD). While in the area we listened a lot to the 147.210 repeater run by a group called the Bomb Squad (open). My son eventually got enough courage (he's 12, and we've both only had our tickets about 5 weeks) to jump in on one of their roundtables. They were very encouraging and patient, and my son had a great experience. He also made his first maritime mobile contact on that repeater - one of the regulars is stationed on a USN destroyer tender. There seemed to be activity on it most of the time.

The repeater location is Sunset Point (I think, supposedly somewhere between LA and San Diego), and I think it had a PL. (I lent my repeater directory to a friend for his vacation, so I can't look it up to be sure). It seems to have great range, as we picked it up east of San Bernadino. At any rate, I think you'll enjoy this group...they certainly left a favorable impression of So. California 2m on me, despite what I've read here.... :-)

Good luck! Let me know how you do.

: The Georgia Tech library has QSTs going back to the 1920s. I often
: browsed them on boring afternoons at the library when I was a student.
: (And no cracks about them being *current* issues then.)

You guys keep missing the point! I have no doubt that there are very isolated cases where some "public" libraries may hold old issues of QSTs or other magazines .... but fact of the matter, it is a royal pain in the arse for John Q (ham) Public to even "think" that they may be available in such a location. Your comments are, IMHO - exceptions to the general rule. For every single case you can show where the old mags are "available" there are several orders of magnitude more where they are not .... and besides ... even if they are available ... chances are ... no one will ever see them.

: As for doctor's and dentist's waiting rooms, have you ever looked
: at the dates on some of the National Geographics piled in those
: places? 1960s vintage QSTs would be downright modern by comparison.

Oh yeah right, like patients (or dentists/doctors) are going to find it interesting to read a 20 year old QST. Ya know, a very literate though non-Ham friend of mine decided one day to read a QST magazine - cover-to-cover .....just to see what it was like. He admitted that he understood virtually none of it and had no further inclination to try the experiment again. (Oh boy ..... I'll bet ur gonna tell me about all the non-hams you know who've read an old QST cover-to-cover and came to see the light. sheesh)

>timer, etc.

I disagree with your timing. I bought my combo "cube" (not really the same shape as the Kubes, it's rather flat) no more than two years ago, on closeout sale at RS, and I'm reasonably sure this store wouldn't have had anything 15 years old to sell. :-)

The Catalina repeater is 147.090. And, it is a good one. I used it once from Santa Barbara, talking to a friend in San Clemente (in between LA and San Diego).

1821. TR2400 help esp in Bay area

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-01 23:46:42 UTC
From: dave@flowserver.stem.com
Message-ID: <9408012343.AA16700@flowserver.stem.com>
Source record: 262521

Greetings! I just acquired an old kenwood TR-2400 with a dead battery and no charger. If you have any accessories lying about for this radio that you no longer need, I'd like to buy them.

If you are in or near the bay area (CA), and have one of these radios, would it be possible to meet and swap in one of your charged batteries to make sure this thing functions before sinking any significant quantities of cash into it? It would only require about 1 minutes use of the battery to check. Thanx.

Also, can anyone point me to a tone unit that would work in this radio.

73 de Dave, N9UXU

1822. TAPR Bulletin: TAPR801.001

Newsgroup: rec.radio.amateur.misc

Message-ID: <31k3dr$api@hermes.unt.edu>
Source record: 262519

SB TAPR @ TAPR $TAPR801.001
NEWS: TAPR to make available ARRL CNC and DC Proceedings

Please use BID: $TAPR801.001

Tucson Amateur Packet Radio August 1st, 1994

TAPR to make available ARRL CNC and DC Proceedings

TAPR has arranged an agreement with the ARRL to be the distribution point
of past proceedings of the ARRL Computer Networking Conferences and Digital
Conferences. This will apply to proceedings that are more than two years
old. For example, the ARRL will continue to distribute the 12th (1993)
and 13th (1994) proceedings this year, then next year TAPR will begin to
distribute the 12th (1993).

In this way, TAPR and the ARRL hopes that these proceedings will be fully
available to digitally interested hams. Proceedings should be available
from the TAPR office the end of August.

TAPR would like the thank Mark Wilson, AA2Z, and Jon Bloom, KE3Z, for
their help at the ARRL with this arrangement.

There has been interest in having many of the papers available in
electronic form. TAPR will begin to work on contacting authors for
premission to generate computer versions of many of the papers.
If you are an author of an ARRL CNC or DC proceedings paper and would
like to give TAPR premission to make available your paper electronically,
please send e-mail to tapr@tapr.org. If you have the paper in electronic
form already, please send that also. More on this project as it forms.

>Anyone out there currently using the Alinco DJ-580T? I'm thinking of
>making a purchase in the next few days, so prompt replies will be
>appreciated.
>

Congrats on passing the tests! I've had a DJ-580T for two years now, and it's a great little HT. I use mine in the car as well as pedestrian mobile, and it works really well on both bands. You'll want to replace the rubber duck antenna that comes with it, though, because it's not much above useless. I use a Diamond R77-B dual-band extended rubber duck and it works pretty good.

Sandy, my mother lives in a tiny town called Minden, Nevada. Their
library has copies of QST donated by the local radio club. The pages
are dog-eared showing lots of use. This is a small town yet those
QST's are read widely.

While visiting the small beach town of Carpenteria last year I went
to the public library and found QST. Again, this is a small town yet
those issues showed signs of wear.

Anyone with an interest in radio will know to go to the library and
find the the stacks containing radio books and magazines.

> (Oh boy ..... I'll bet ur gonna tell me about all the non-hams
>you know who've read an old QST cover-to-cover and came to see the light.
>sheesh)

Sheesh yourself. My elmer had stacks of QST's lying around his garage.
As a young pup I practically memorized them cover-to-cover. Those mags
along with his encouragement made me a ham.

>Sorry ..... but you're still wrong. ;-)

Phooey.

: Does anybody have any info?

Another high level repeater which is open is 449.6375 with a 103.5 PL,
the only trouble is that sometimes the element tries to trash it.
449.65 and 449.625 are paper repeaters.
We'd like nothing more than hams using the repeater for communications.
However, at times you may not be able to key it up because its been put
in DPL only mode which is sad.
give it a try.

Hamtronics still sells good receiver kits, including one with extra-tight
front-ends (helical filters). Friends of mine have had good success with
them. I've had good luck wth several of their toucht-one decoder boards
-- work great and keep working.

Many thanks to all who replied to my request for the "Radiotron Designer's Handbook".

Special thanks go to Mike Czuhajewski (whose name I can spell without looking now <G>) for sending me copies of th e relevant pages, and to William Marchant for sending me the whole book at his cost+postage. (in a practically waterproof package no less...)

And to people that e-mailed me, and then never answered my responses: One HUGELY giant raspberry! {;^)

C Y'ALL! (What can I say? I'm Southern!)

Dan Kline <t230579@univscvm.csd.scarolina.edu>

P.S. Anyone seen Terman's "Radio Engineering"?

Edmund Scientific has a clock that sets itself from WWV signals. I don't recall if it has RS-232 output.

Cliff,

I vaguely recall reading an article in Mobile Radio Technology about a radio shop that did a base station/repeater install in a tunnel and they got their Micors to lock phase by referring the TCXO's AFC to a master high-stability oscillator. Check the back issues.

PRESIDENT'S REPORT

This is Michael Corbin, VK2PFQ.

As I mentioned last week, there was, last Monday, a meeting of the Concerned Amateur Group. Since I had been invited to attend I went along. The purpose of this meeting was to discuss possible ways and means of coming to an agreement on a solution to our problem, which would be acceptable to everyone. It was evident from the outset that all present were of a similar view, and that was, lets get this sorted out and get on with our hobby.

It had been suggested that one solution could be the appointment of an Administrator to take charge of things until the next election in April 1995. Whilst another election was discussed it became obvious, that since the matter would not come to Court until around November, then it seemed a waste of money to have an election at that time and.. ... five months later to have another one in April at a cost of around $2500 or $4000 each. depending onwhose figures you use. That left the option of an Administrator.

This was discussed at great length. A motion was prepared which was and I quote....

(i) Subject to the ratification of the Court. An Administrator be appointed to manage the affairs of the Institute until such time as an early election can be called.

(ii) Such Administrator be empowered to make proper arrangements for the appointment of a Returning Officer and the conduct of the election.

(iii) That Mr. Michael Corbin be appointed as the person to undertake the responsibility of Administrator.

(iv) The Administrator further be empowered to appoint such persons as he sees fit to undertake specific responsibilities and to replace the existing Management Group."

This motion was passed unanimously. In attendance were several amateurs who had indicated in our recent "straw poll", that they wished to be joined in any Court action. This meant in essence that they were satisfied with this proposal and no longer wished to go to Court.... A solution at last... at least we thought so.

Next morning I attended a meeting at the office of Mr. Richard Parsons, the Divisional Barrister. He had it seems investigated the

idea of an Administrator further and concluded that such an appointment could only take place if we were insolvent or, in danger of becoming insolvent. Since this is not the case, then another solution had to be found.

Now I must stop here, as the solution put forward by the Divisional Solicitor and Barrister has as yet, not been before "Council". As well as that, those 15 persons who indicated in our "straw poll" that they wished to be joined in any Court action have to be consulted so that agreement can be reached. This will obviate the need for a long drawn out legal battle at enormous cost to everyone.

To this end I have sent by certified mail a copy of the opinion put forward by the legal people, so that these individuals might advise "Council", whether they are happy to accept this new compromise.

If this is the case, then it will be a simple matter in Court to put the affairs of the Division back in order. "Council" will consider the legal advice next Thursday. If any of the 15 members I have sent the advice wish to have input into this Council Meeting, I would appreciate a call before Thursday evening.

Next weekend, subject of course to the agreement of "Council", I will explain in detail the proposal put forward by the Barrister. Have your tape recorders ready. I'm sure the majoority will agree that the solution put forward is more than acceptable. I'd love to tell you more but I cannot until the matter is considered by "Council". You'll all have to sit on the edge of your chairs until next Sunday!

See you then.

Federal news

Commercial transceivers covering two metres?

In June 1993 the WIA wrote to the then Deaprtment of Transport and Communications (DoTaC) over concerns that an application had been made to the Australian Customs Service for a tariff concession on VHF transceivers imported by Motorola.

The concern was that the transceivers' operating range overlapped the top 2 MHz of the two metre amateur band, 146-148 MHz. The amateur service is a primary service on the 4 MHz wide 144-148 MHz band in Asutralia.

The Acting Director, Canberra Customer Services & Technical Team, from the Spectrum Management Agency (SMA), Geoff McMillan, replied to the inquiry in late May this year.

The WIA requested assurance that these Motorola transceivers would not be used in the 146-148 MHz section of the two metre band.

In his reply, Mr McMillan said, "under the Spectrum Management Agency's present policy, the frequencies in the band 144 MHz to

148 MHz are intended exclusively for Amateur service use.

Similarly our current frequency asignment procedures would not permit non-amateur use of this band without consultation with the WIA."

He concluded by adding a note of regret over the delay in replying.

Stolen equipment

WIA Federal receives enquiries from time to time as to whether something is on the Stolen Equipment Register, particularly if the enquirers are buying equipment.

It is important that anyone who has had equipment stolen or who is looking to buy secondhand equipment knows that this register exists and that it is kept up to date.

To ensure it's kept up to date, all information for inclusion on this register should be sent in writing to:

WIA Federal
Stolen Equipment Register
Box 2175
Caulfield Junction
Vic 3161

or by fax to (03) 523 8191

As a new service to members, this Stolen Equipment Register will be available from your Division's office. It is updated on a monthly basis. All enquiries regarding the Register should be directed to your Division's office or contact address.

From the Federal Media Liaison Officer

Dural report

Dural report

It should not be long now before the Divisional 6m repeater is on air; the cavities need to be aligned and the antennas adjusted.

The 40m AM transmitter is suffering from an intermittent fault, apparently in one of its many relays, which is proving difficult to find. If anyone has practical experience with an AWA J-54800, especially if they have a good service manual, then we would be pleased to hear about it.

People with climbing harnesses are needed to shinny up the various poles here, to put the HF dipoles back where they belong; they were lowered to make way for the CSR tower and need to be replaced.

If anyone thinks they have some skills that could be used at Dural, not just radio but also carpentry and brick-laying etc then please contact Dave Horsfall VK2KFU, and a job will be found for you.

from Dave VK2KFU

Federal News

The 80 metre DX window

With the trough in the 11-year sunspot cycle comes improved propagation on the lower bands, including the 80 metre DX window.

Naturally there's increased interest in the window.

The band 3794 to 3800 Kilohertz was made available to full call VK stations to allow them to work DX.

However the window is very narrow and includes a one Kilohertz guard band on its lower edge.

WIA Federal Techincal Advisory chairman, John Martin VK3KWA, says some poor operating habits are being observed on this band.

These include long conversations which deny others access to the window, and a high incidence of out-of-band operation.

John Martin, in an article to be published in Amateur Radio magazine, says operation on 3795 lower side band is very common.

But he also points out that such operation is totally out of band, because the sideband falls below the band edge.

From Roger Harrison VK2ZRH

Electro magnetic compatibility laws

New Australian standards to curb electro-magnetic pollution will be in force by January 1, 1995.

Communications Minister, Michael Lee, says radiation limits are to be imposed on a wide range of equipment and goods.

The Minister says, at the same time, "immunity" levels will be set for other products to make them resist the pollution.

The timing of the government standards in Australia coincide with an identical move by the European community, and a world-wide focus on the problem.

The lack of mandatory immunity standards had, in recent years, left the door open for TV receivers to be imported, which are susceptible to unwanted signals and radiation.

Some of these receivers had their immunity components deleted at manufacture as a cost saving measure.

Standards are likely to be adopted to cover the level of immunity expected in all susceptible equipment.

All standards are drawn by Standards Australia, which says it has published most of the technical standards needed for electro-magnetic interference.

Work is continuing on drawing up some of the required immunity standards. The WIA is involved in this process.

From Roger Harrison VK2ZRH

WICEN Report

WICEN news

With luck, the Sydney WICEN repeater on channels 7150/8275 will be back on air within a week or so; a number of hiccups occurred which kept it off the air, so hopefully the Sydney net will soon be re-vitalised. Speaking of the Sydney WICEN net, it has been suggested that the time of 9.30pm is rather late; the reasons for this particular time are long and complex, but lately it had to do with a certain drama show on ABC-TV. Perhaps members may like to give some thought to changing the date and/or time of the Sydney net, bearing in mind that it is rumoured that this popular show will soon reappear.

There are a couple of new events on the WICEN calendar. The annual Batemans Bay Car rally is on Saturday 13th August, and as before Steve VK2XNH is looking for volunteers. Also next month is the Windsor-Sackville Regatta on Saturday 27th August, from 0730 to 1330. There will be three checkpoints, one dry and two wet, at Windsor, "station 48", and Sackville Ferry. Contact details are scanty at the moment, but interested personnel may contact Barry McGrath, the RVCP co-ordinator, on telephone (02) 747-6734 (w) and (02) 666-6596 (h).

The regular exercise next month is the City to Surf Fun Run, on Sunday 14th August, and Eric VK2KUR is looking for volunteers for this fun event. There will be the usual barbecue afterwards, at the usual place, and further details will be heard later on. Please note that it is hoped to conduct this event on UHF, to avoid pager garbage; Novices need not worry.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the

WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channel 7150. If there are any other regular nets then we'd like to hear about them.

WICEN (NSW) Inc. operates a telephone BBS, and it is accessible at speeds from 300 to 14,400 bps on (02) 888-2763. Brett VK2XMU is the "Sysop", and all listeners are invited to use it.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

1994 City to Surf

The CITY to SURF fun run is almost here again and WICEN is still looking for operators.

There are a number of changes this year so it won't be exactly the same as in previous years.

As with last year's event we have again been able to organise the same briefing venue and will again be holding a barbecue afterwards. All participants along with their families and friends are welcome to attend. With some operators finishing much earlier than others, they will be able to head out to the hall and maybe have an early lunch whilst waiting for the rest to return. This way we won't have everyone trying to use the BBQ at the same time.

So bring your along yourselves, your families or friends and your food and drinks. There is plenty of room for the kids to play round the hall. You can leave your food in the fridge whilst you are out and cook it when you get back.

If you will be able to attend please contact Eric van de Weyer VK2KUR either on his home number of (02) 337-2909 which has an answering machine as well or at work on (02)318-6138 between 0800 and 16oo. Those numbers again, 337-2909 at home or 318-6138 at work.

Submitted by Eric van de Weyer VK2KUR, WICEN Commander for 1994 City to Surf

SUMMARY OF ACTIVITY

Solar activity was very low all week.

The geomagnetic field at Learmonth (WA) was quiet to unsettled until 27th July when there were active levels 0300-0600 UT, and unsettled on 28th.

Ionospheric F2 critical frequencies at Sydney were near predicted monthly values until local night on 28th when frequencies

were 20 per cent enhanced. Spread F was observed during local night on 25th and 27th July, and strong spread F reported on 28th.

FORECAST FOR THE NEXT WEEK (29 July-4 August)

SOLAR: Very low.
GEOMAGNETIC: Quiet to unsettled with active periods on August 3.
IONOSPHERIC: Near normal.

Courtesy of IPS Radio and Space Services, Sydney

Summary by Pat VK2JPA ANARTS Broadcast Officer

FROM THE ST GEORGE AMATEUR RADIO SOCIETY

In the Society's bulletin two weeks ago it was mentioned that its Mt.Bindo repeater VK2RDX was off the air due to the failure of the wind generator. At that time, other than that the blades were not turning, it had not been ascertained whether the failure had been caused by a bearing failure or rifle fire. That situation is now only of academic interest. At some time previous to last Monday the 25th a person or persons hacksawed through one leg of the 50 foot generator tower, then tipped the tower over, so that the other two legs bent and collapsed and the whole thing fell down and hit the ground so hard that the top section of the tower is now severely bent and laying down the side of the mountain. They then hacksawed off the tail of the generator, through it in the bush, then removed the, what we would expect, extensively damaged main body of the generator from the tower and made off with it.

The St.George Society would be most grateful if anyone has any information on who is responsible for this wanton act of vandalism and theft.

The next meeting of the Society will be held at the usual venue, that is in the 1st Allawah Scout hall, corner of Bellevue Pde. and Blakesley Rd., South Hurstville at 7.30 PM on Wednesday evening the 3rd of August 1994.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and the members look forward to meeting those interested in attending.

from - Allan VK2XF Publicity Officer

Orange and District Amateur Radio Club Inc.

Orange and Districts Amateur Radio Club reminds members and friends of the Annual General Meeting and election of officers takes place this coming Friday night 5th August at 7.30pm. This will be at the usual meeting place, the Orange Cultural centre in Zara street and will also feature the traditional technical address from the retiring President Robert VK2ZRJ who will talk about the lightning strike locator system recently tested by OTA Electricity.

A special supper has also been planned by the Committee with something a bit up-market from the usual coffee and biscuits including fizzy cool drinks and cans. There will also be boxes of components at cheap prices. Don't forget we have plenty of car parking space and the meeting room is comfortably heated. Everyone is welcome at Orange club meetings so see you there this Friday night.

from Peter VK2ETK Club Secretary

Mid South Coast Amateur Radio Club Inc.

Next Saturday, August 6th, is the date for the next quarterly meeting of the Mid South Coast Amateur Radio Club, Inc..

The club meets at the "H Ranch" Little Forest Road, Milton. Turn inland off the Princes Highway on Little Forest Road, just 3 km north of the historic township of Milton.

The location has spectacular ocean and mountain views and the club is well-known for the friendly atmosphere of its meetings.

An interesting speaker will address the meeting and there will be plenty of time for a good, old-fashioned ragchew.

Arrivals are from 10.30 onwards and the club will provide tea, coffee, milk and sugar. All you need to bring is yourself, your family and your lunch. Visitors are most welcome - we look forward to seeing you there.

From Stan, VK2EL, for the Mid South Coast Amateur Radio Club, Inc.

Blue Mountains Amateur Radio Club Inc.

Have you run foul of the Highway Patrol? Want to know how to avoid problems with the Highway Patrol? Want to know more about police radar etc? Well come along to our next meeting on Friday 5th August when the guest speaker will be a member of the local Highway Patrol.

The club meets 8.00pm at Springwood High School, corner of Grose Road and Chapman Parade, Faulconbridge (entrance to car park in Chapman Parade). That's 8.00pm Springwood Hogh School Friday 5 August. All are welcome and refreshments are served.

P.S. If you get booked please mention Blue Mountains Amateur Radio Club - we get a percentage on referrals!!!

Alex VK2KAS - Publicity Officer

Castle Hill Amateur Radio Club meeting

The next meeting of the Castle Hill Amateur Radio Club will take place on Wednesday evening 3 August at the Castle Hill Military Radio Museum 222 Old Northern Road, commencing at 8 pm. Harry VK2BHT will give a talk about antennas, feedlines, and how to use Smith charts to solve impedance matching problems.

Visitors are welcome. Please contact Ian VK2ZIO, Publicity Officer, on 680 2112.

Submitted by Ian O"Toole VK2ZIO, Publicity Officer

Vintage wireless (or old radio) display day

Do you like listening to "Sentimental Journey" on the ABC on a Saturday night? Can you remember a Kriesler Triple Throat or a HMV Little Nipper? Have you a collection of 78's tucked away? Say no more - this day is for you!

On Saturday 3 September, Westlakes will gather together in one display the best range of wireless memorabilia possible. It will be laid out in order inside the clubrooms at Teralba. Nothing will get wet, pinched or damaged.

Members are invited to bring their radios of yesteryear to add to the collection. We will pick them up and return them if necessary and the club guarantees the well being of all equipment donated for exhibition.

Most of the radios will be working and it will be a rare chance to see so many old-time sets in one place. The hours of opening will be 11am to 5pm and although most of the wireless sets will be for display only, their owners are free to advertise and sell them on the day. It's a cash-in-the-pocket deal, no commission is payable to Westlakes - the club is happy to provide the venue.

: >kind of results we could get with simple RDF equipment.

I can't believe you would actually consider building electronic equipment
or use GPS, Loran, or other high-tech means to get a bunch of high-school
students to draw a rough map of a woods you can easily walk through. Do
you really need accuracy to the nearest inch? Gary suggested a
theodolite and chains, instead. I suggest something much simpler. Get
some pieces of rope, tie a knot every ten feet, pair off
with each pair carrying a hand compass, and measure the bearing and
distance to representative checkpoints. Run a circuit, and keep a
hand plot on paper.

When you are through, you will have rough plots throughout the forest
and you can replot them all on a large grid of graph paper. You will
see a scatter of points for each checkpoint because of the errors in
each circuit, but I am sure you will be amazed at how small the scatter
is.

I wonder if the next step in Boy Scouting will require that they carry
microwave ovens with them on hikes! :-)

1836. Digest of Articles - QST Jun 94 (Long - 45k)

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-02 10:20:31 UTC
From: wvanho@infinet.com
Message-ID: <31l6lf$424@rigel.infinet.com>
Source record: 262390
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

DIGEST OF ARTICLES - QST June, 1994

Following are digests of articles printed in the June, 1994 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:Key Components of Modern Receiver Design - Part 2
Author>Rohde, Dr. Ulrich L. - KA2WEU
Source>QST Jun 94, pp. 27-31
Abstract>Circuits are presented which would bring about the improvements in receiver design described in Part 1 of this series.

Digest>In Part 1 of this series, the author specified dynamic range, AGC, and synthesizer action as the three receiver factors most in need of improvement. First, improved dynamic range requires automatically controllable attenuation ahead of the first mixer. He presents a schematic diagram of a PIN-diode attenuator, used with a d.c. amplifier. The combination provides a very low noise figure and a high intercept point.

Next, he describes a dual AGC system. The first AGC acts as an overload-control loop. When a strong signal appears that is inside the bandwidth of the first i.f. filter (roofing filter), it reduces the gain ahead of the second mixer. The second AGC loop is conventional and controls the gain at the second i.f. In his system, he places the roofing filter immediately after the first mixer. In order to avoid the necessity of a post-mixer amplifier, he uses a roofing filter made of discrete crystals having a very low insertion loss, followed by a first i.f. amplifier with a noise figure no more than 2-dB. When this is followed by a second i.f. filter with good shape factor, an overall noise factor of less than 12 dB. can be achieved.

Finally, he describes synthesizer designs that achieve low phase noise. He illustrates a system that uses direct digital synthesis (DDS) to drive a phase-locked loop (PLL), using a novel single-VCO that generates less phase noise than does a more complex and costly multiple-VCO system. _____

Title>TA2:Inexpensive Interference Filters
Author>Bloom, Alan - N1AL
Source>QST Jun 94, pp. 32-36
Abstract>Single-band filters at the transceiver antenna terminals reduce adjacent band interference in Field Day multi-transmitter operations.

Digest>This article describes the construction of single-band band-pass filters originally designed to reduce interference between transmitters operating on multiple bands simultaneously from a single Field Day site. Some have found them to be useful for other purposes, as well. The author cites a case in which similar filters were used to eliminate problems from a nearby broadcast station, and other cases in which a 40-meter filter reduced interference from short wave broadcast stations

outside the ham band.

Filters for five bands are built in a single cabinet, selected by a two-pole, six-position rotary switch. The sixth position provides straight-through operation, by-passing the filters.

Each filter is made of two coils wound on T-94 powdered-iron toroids. Each coil is shunted by a fixed capacitor to form a tuned circuit resonant in the respective bands. The two tuned circuits are coupled by a coupling capacitor. The Q of the tuned circuits and the value of the coupling capacitor are calculated to provide the optimum filter shape factor.

Photographs illustrate single band filters without switches as well as the multi-band model. Mr. Bloom provides a table listing the core size, winding specifications, and capacitor values for each amateur band from 160- to 10-meters. All the coils were wound using No. 16 wire and, for the higher frequencies, the windings were made of two or three strands twisted together. He rates the power level of the filters at 150-watts. Operation at that level has been confirmed in Field Day operations.

Title>TA3:Beginners' Boomers: Two Phased-Vertical Arrays for 30-Meters
Author>Borich, Gary D. - W5UDV and Logan, Robert S. - NZ5A
Source>QST Jun 94, pp. 37-40
Abstract>Building two two-element vertical phased arrays on 30-meters. One provides figure-8, the other cardioid, radiation patterns with 3-dB. gain.

Digest>These two authors have each built a phased-vertical array using two elements on 30-meters. One uses quarter-wave spacing, and the other half-wave. The article includes plots of theoretical radiation patterns; shown are the pattern for in-phase and 180-degree out-of-phase operation of the array with half-wave spacing, and in-phase and 90-degree lagging phase for the one with quarter-wave spacing. The pattern for the half-wave spaced array is a classic figure-8 end-fire; that for the in-phase connection is a broadened figure-8, shifted 90-degrees in azimuth. For the quarter wave array, the 90-degree lag phasing provides a cardioid pattern whereas the in-phase pattern is close to omnidirectional. Both produce gain near 3- or 4-dB. over a monopole.

The elements in both antennas are quarter wavelength (23.5-foot or 7.16 neter) poles made of aluminum or steel tubing. The bottoms are mounted on glass bottles for insulation. At the base of each element, the builders drove two ground rods, connected to the feedline and to each other with very heavy gauge copper wire. In addition, they laid 540 square feet (50 square meters) of steel mesh on the ground around the array, carefully bonded to the rods. This is so-called "re-mesh" left over from driveway or patio concrete construction. They report that they obtained it free from builders who were glad to have it carried away without charge.

The feed system includes a weather-proof box containing relays to switch from either in-phase or out-of-phase operation. Accurate phasing was obtained by cutting lengths of coax to an exact one-quarter or one-half electrical wavelength. For in-phase operation, two half-wavelength lines branch from the common feed point to the base of each element. For the out-of-phase condition, an additional half-wavelength line is added to one of the two elements of the half-wave spaced array. For the other array, the cardioid pattern is obtained by adding a quarter-wavelength phasing line to the feed going to the element that is located forward in the desired direction.

Physical phasing lines work well only if the antenna current is equally divided between the elements and the standing-wave ratio (SWR) is low at the base of each element. The authors outline the method that they used to ensure these conditions. First, they drive each element by itself and tune it to resonance by adjusting its length (height). With a wattmeter, they measure the power flow in each to ensure they are equal. If the SWR at the base is below 1.5:1, they proceed; if not, they will do whatever is necessary to get it down, including building a simple antenna tuner to be permanently mounted at each element.

After the elements are independently tuned, they are driven in phase and the phasing lines adjusted to insure that the SWR remains low at both element feed points. Finally, they follow a similar procedure while switching the phasing line into each element, in turn.

Title>TA4:An Automatic Temperature-Controlled Fan
Author>Kolts, Bertram S. - WA0WZI
Source>QST Jun 94, pp. 41-42
Abstract>Building a temperature-controlled box to hold gear needing cooling.

Digest>In order to save power, and also to reduce the noise level, one can use a temperature control system to turn on the cooling fans only when they are needed. This article describes a temperature-controlled box that the author built to house a power supply.

It uses a thermistor as a temperature sensor. An electronic circuit utilizes two transistors to control the power to a d.c. motor-driven fan in an on-off manner. A single-turn potentiometer adjusts the temperature set-point.

One of the transistors is an N-channel MOSFET power transistor capable of making and breaking the full load current of the fan motor. The author warns that the starting current of a motor is usually several times greater than the steady-state running current, so the transistor must be selected for its ability to handle the maximum load.

The circuit diagram and parts list are included. A PC-board is available from FAR Circuits, 18N640 Field Ct., Dundee, IL 60118-9269 for the price of $4.75, including domestic USA shipping.

Title>TA5:Overvoltage Protection for A.C. Generators
Author>Paquette, Jerry - WB8ROW
Source>QST Jun 94, pp. 43-44
Abstract>When using portable a.c. generators, protect equipment from voltage surges. The article tells how.

Digest>The circuit described in this article protects equipment used in Field Day operation, or in any other situation requiring portable power, against any damage from voltage surges. It utilizes a device known as a Ground-Fault Circuit Interrupter (GFCI) to interrupt the power anytime the a.c. voltage rises above a safe level.

A simple electronic circuit circuit is provided to actuate the GFCI. It contains a step-down transformer that reduces the 120-volt line voltage to 12-volts a.c., and a rectifier to convert it to a d.c. potential. A separate adjustable reference voltage is provided by a circuit containing a Zener diode as a reference. Whenever the rectified line voltage rises above the set-point, the GFCI cuts the power and it must be manually reset.

If, as is commonly the case during Field Day operations, equipment is scattered over considerable distances and fed from a central power generator, a separate GFCI must be used at each operating location.

A circuit diagram and parts list is included in the article. No kits are available, but a PC-board template can be obtained from the ARRL Technical Department Secretary, 225 Main Street, Newington, CT 06111-1494. Send an SASE and ask for the Overvoltage Protection Template from June, 1994 QST.

Title>TA6:Simple, Effective Elevated Ground-Plane Antennas
Author>Russell, Thomas - N4KG
Source>QST Jun 94, pp. 45-46
Abstract>A rotary beam on a tall tower can form a top-loaded vertical antenna. Tune it to resonance and feed it by using raised radials.

Digest>It is common practice for hams who have rotary beams atop tall towers to utilize the tower in some way as part of a low frequency antenna. Some use it to support wire antennas, such as slopers; others resonate the tower, itself, as a grounded vertical fed against buried radials. In this article, Mr. Russell describes what may be the most efficient and easiest way.

He observes that a Yagi antenna on top of a metal tower can act as effectively as a capacitance "hat" for top loading. He cites an empirical formula developed by ON4UN that allows one to calculate approximately how much equivalent electrical height is added by an array of a particular size.

L = 0.38*F*(H+SQRT(2*S-H/500))

in which: L is electrical length in degrees
F is frequency in MHz.

H is tower height in feet (1 m.=3.28 ft.)
S is the Yagi area in sq. ft.

As an example, a full-sized three-element 20-meter beam provides the equivalent of about 40 additional feet of tower height as far as resonance is concerned.

Recent computer studies, now confirmed in many installations, have shown that elevated radials perform even better than buried ones. In fact, four radials ten feet high have been shown to be equivalent to 120 buried ones! Mr. Russell used that principle to solve one other problem: how to adjust the equivalent height to quarter-wave resonance. He does it by raising the radials on the tower to the point where the upper part the tower plus top loading resonates at the desired frequency.

In building the antenna, the author cuts four radials accurately to a quarter-wavelength and solders one end of each to a wire ring around the tower. He attaches the coax feed line with the center conductor to the ring and the shield to the tower. He experimentally moves the ring up or down to find the spot where a dip meter, or other means of measuring resonance, finds it at the desired frequency. Then he permanently mounts the ring on the tower with insulators.

Because of the top loading, the radiation resistance of the antenna is considerably lower than the 35-ohms that would be normal for a full-size grounded monopole. Mr. Russell's antenna measured 17-ohms, so either an antenna tuner, or other means of matching, is necessary if 50-ohm coax feed will be used. For his 80-meter antenna, he used a matching section made of two paralleled lengths of 75-ohm RG-59, 46-feet (14.02 meters) long. Then he fed it with 75-ohm CATV hardline.

PRODUCT REVIEW (PR)
Conductor: Mark Wilson - AA2Z
Editor, QST

Title>PR1:Kantronics KAM Plus Multimode TNC with G-TOR
Author>Ford, Steve - WB8IMY
Source>QST Jun 94, pp. 70-72
Abstract>An upgraded KAM now provides G-TOR operating mode, which is described in the article.

Digest>The Model KAM Plus is an upgrade of the well known Kantronics KAM. It contains all the features of previous models plus one major addition and several other added features.

The original KAM was the first multimode TNC that offered simultaneous dual port operation. Users could operate UHF/VHF packet at the same time as HF digital modes. They could also link the two to provide a gateway service.

The most important addition of the Plus model is the G-TOR operating mode. This is similar to PacTOR in many ways, but adds Golay self-correction coding. That is the scheme that is used in the Voyager spacecraft for transmitting scientific data across the vast reaches of outer space (now more than 5-billion miles) using very low power transmission. Using indicators within each data frame, it is able to correct for up to 3 missing or mistaken characters per frame.

Other features added in the new model are additional memory (to a maximum of 512k bytes), higher sensitivity in the demodulator, and a front-panel LED to indicate that a message is waiting in the mailbox.

A number of tests have been made and reported in the literature, including several by Mr. Ford, that show G-TOR's ability to transmit data at more than 2.5:1 increase in rate over PacTOR when operating under difficult propagation conditions.

Wnen one is calling CQ in G-TOR, the transmission is identical to that of AMTOR FEC. When the call is finished, the KAM will respond to replies in either PacTOR or G-TOR. For listening to existing G-TOR links, the unit uses a modified WEFAX receiving mode. This uses a new software package called G-MOM.

With the new KAM Plus model, Kantronics is also offering a new operating software package. The reviewer tested it along with the TNC and used it for AMTOR, PacTOR, RTTY, CW, and Packet, as well. He reports that his results were excellent in all cases.

The KAM Plus, when receiving PacTOR, processes the received signals on the basis of a signal strength threshold determined by firmware. Under very weak signal conditions, this method is theoretically weaker than the original German design that took account of the minute-by-minute variation of overall signal strength and set the threshold between a "zero" and a "one" accordingly. Nevertheless, in operation, the reviewer reports that he had excellent results using PacTOR with very weak signals.

Kantronics has announced their willingness to license G-TOR to all other manufacturers of TNCs, so it is likely that this new mode may catch on nearly as rapidly as PacTOR has. But only the market will decide.

The manufacturer's list price for the KAM Plus is $339.95. Older KAM models can be upgraded to the level of the new unit. The costs of doing so are dependent upon how old it is. The price for the HostMaster II+ software is $69.95.

Title>PR2:Nye Viking MB-V-A Antenna Tuner
Author>Cain, Jim - K1TM
Source>QST Jun 94, pp. 72-73
Abstract>Review of a top quality, manually controlled antenna tuner.

Digest>The Viking MB-V-A is a heavy duty antenna tuner capable of operating at full 1500-watt output continuously on all bands from 160-

to 15-meters. On 12- and 10-meters, it will handle full power using SSB or CW, but must be operated at slightly reduced power in digital modes. It will tune essentially any kind of antenna on all bands from 80- to 10-meters using coax, open-line, or single-wire feed. It will also tune many 160-meter antennas, but does not contain enough internal inductance to handle all.

The unit is built of very heavy components. It is a pi-network with a fixed 230-pF. capacitor at the input, a large, silver-plated, copper-ribbon roller inductor, and a split-stator capacitor with 70-pF. per section and 7,000-volt spacing shunted with three 195-pF. fixed capacitors, switch-selected, at the output.

The front panel contains two large diameter dials, two meters, 4 push-button capacitor switches, and a 5-position push-button antenna selector switch. The first dial is a spinner-knob turning a 25:1 vernier drive to adjust the inductance. The other is a similar size, non-spinner knob that directly turns the variable capacitor. The inductor dial is graduated 0-25 and the capacitor knob 100-0-100.

One meter reads SWR and other shows forward power in RMS watts. The wattmeter has two scales for low and high power, respectively. It automatically switches scales when the input power exceeds 300 watts.

For initial tuning, instructions advise to tune a received signal for maximum strength using first the inductor, and then the capacitor. Once the received signal is maximized, the transmitter should be tested at low power and the controls adjusted for minimum SWR and proper loading using the meter indicators.

The reviewer used the unit with a variety of antennas, and had good results with all on bands from 80- to 10-meters. He was unable to tune a 200-foot dipole on 160-meters because the tuner did not have sufficient internal inductance; but after he added 35-feet of wire on both ends, it tuned very well.

The manufacturer's suggested list price for the MB-V-A is $791.00.

HINTS AND KINKS (HK)
Conductor: David Newkirk - WJ1Z
Sr. Asst. Technical Editor

Title>HK1:Better Linearity During 50-MHz. SSB Transmit with the Kenwood TS-690S Transceiver
Author>Pelham, John - W1JA
Source>QST Jun 94, p. 75
Abstract>A circuit change to improve audio quality of this transceiver.

Digest>The author's TS-690S produced a "scratchy sounding" six-meter SSB signal. He found that the cause was cross-over distortion because the bias level on IC-1, the 10-watt driver module that drive the final

amplifier, was too low. It only measured 7.2-volts and should be 9-volts. His solution was to add a Darlington transistor and a 3.9-volt Zener diode in a circuit to increase the bias to the proper level. Schematic diagrams are included to show the "Before" and "After" circuits.

The editor appended a note that the original QST Product Review did not find the signal distorted and concludes that the problem might have been a peculiarity confined to Mr. Pelham's unit, or perhaps only a portion of the units produced.

Title>HK2:A Counting Bar Graph for the WD0O ID Timer
Author>Aughenbaugh, Thomas F.- NY6Q
Source>QST Jun 94, pp. 75-76
Abstract>An added LED bar-graph displays minutes counted.

Digest>Mr. Aughenbaugh offers an improvement feature for the 10-minute ID timer described by Conklin in Hints and Kinks, QST Nov 93, p. 82. As described, the timer generates a one-second beep each 10-minutes to remind the operator to identify his station. This author's suggestion is to add a bar-graph that illuminates one bar each minute during the 10-minute countdown.

It is simply and inexpensively done by connecting each segment of a 10-element bar-graph display (Radio Shack 276-081) to each of the outputs of the IC-4017 used in the original timer. The ten cathodes leads from the bar-graph are connected together and flow to ground through a single 470-ohm resistor.

This modification also makes it easier to calibrate the timer, since one needs only to be sure that it take exactly one minute for the first bar to light to be sure that the full 10-minute time period will be accurate.

Title>HK3:PacTOR Backspace with the Kamtronics KAM Plus
Author>Schwartz, Allan - WA6EHA
Source>QST Jun 94 - pp. 75-76
Abstract>Adding a <Backspace> function to PacTOR on the KAM Plus TNC.

Digest>Mr. Schwartz points out that the Kamtronics KAM Plus TNC does not support the back-space character in PacTOR mode, although that is one of the most useful functions in PacTOR. By experimenting, he discovered that one of the functions in the Packet program will also work in PacTOR. That function is <Backspace>, which is initiated by two keystrokes: <Control-V>, <Control-H>.

His terminal program is Q-Modem, which allows Macros to be programmed. He programmed one of his function keys to give the <Control-V>, <Control-H> sequence, and can now use that key as a <Backspace>.

Title>HK4:Curing Transmit and Receive Distortion in the Heath HW-5400 Transceiver
Author>Pierpont, Ken - KF4OW
Source>QST Jun 94, p. 76
Abstract>Improving audio quality with the Heath HW-5400.

Digest>Mr. Pierpont had known ever since he built his HW-5400 eight years ago that its audio is distorted in both transmit and receive. He discovered that the problem is caused in the second and third audio stages (Q902) and (Q903).

He found that it was solved by (1) changing the feedback resistor (R922) from 10,000-ohms to 3300-ohms; (2) in the power lead to the balanced modulator, which uses a Motorola MC-1496G (U902), the voltage at pins 6 and 9 should be equal but were not. He solved that by adding a 2700-ohm resistor between pin 6 and the supply rail.

Next, he found that the BFO signal level to the modulator was too low and increased it by changing C921 to 0.1 mF. The product detector also uses an MC-1496G (U904), and he found the same unbalanced supply voltage to that IC as in the modulator. Again, he corrected it by adding a 2700-ohm resistor between Pin 6 of U904 and the supply rail. With those changes, audio is now much clearer.

Title>HK5:How To Remove Connector Sealant From Coaxial Hardware
Author>Reihl, Edgar - WA9ULU
Source>QST Jun 94, p. 76
Abstract>Remove coax sealant by soaking it in turpentine, then wiping.

Digest>Anyone who has ever used the sticky sealant for coax connectors is painfully aware of the problems of removing it. The author has found that if he cuts as much as possible of the black goop away with a knife and soaks the hardware in turpentine for 10 or more minutes, he can wipe the remainder away with a paper towel. He may have to repeat this procedure a second time to get it all.

Title>HK6:Modified Grounding Cures RF Feedback in a GM Mobile
Author>Melanson, William A. - W1LID
Source>QST Jun 94, p. 76
Abstract>Don't believe all instructions from manufacturers regarding installation of equipment in vehicles.

Digest>This author installed a Kenwood TS-440S in his Oldsmobile 98 in accordance with the instructions contained in a GM bulletin describing radio installations in their vehicles. He found severe r.f. feedback that caused the rig to oscillate in many cases each time he pushed the push-to-talk button. Contrary to the instructions, he found that it was necessary to run a ground lead from the bolt and wing nut on the transceiver directly to the automobile frame to eliminate the problem.

He reports that he used a length of RG-8 coax as his power cable. The editor appended a footnote cautioning that cables labelled "RG-8" vary

greatly in construction and many use rather light gauge wire for the center conductor. Consequently, they would be inadequate to carry the currrent load of a 100-watt transceiver.

Title>HK7:Lower Monitor-Mode Current Drain for the CMOS Super Keyer II
Author>Vogel, Adolph - DL3SZ
Source>QST Jun 94, p. 76
Abstract>Circuit modification to eliminate excess current drain.

Digest>Mr. Vogel built the CMOS Super Keyer II, originally described by Russell and Southard in QST Nov 90, pp. 18-21. He was very happy with all aspects of its operation except for the 40-milliamp current drain in the Monitor mode was disappointing. He reduced it to only 9.8 ma. by using a 200-ohm telephone earpiece as the speaker and replacing the 2N2222 transistor (Q2) with a BC517 Darlington transistor. He notes that any other small-signal NPN Darlington would work equally well. They will match the 200-ohm speaker well, providing adequate sound level.

Title>HK8:Tips on Installing and Connecting to Ground Rods
Author>Edwards, A. W. - K5CN
Source>QST Jun 94, p. 76
Abstract>A way to improve electrical connections to ground rods.

Digest>In his letter, Mr. Edwards notes that driving a ground rod with a sledge often splays the end of the rod into a flare so that certain connectors will not pass over it. He suggests that a pilot hole be drilled in the end of the rod before driving, and that after the rod is in the ground, the hole be drilled out to tapping diameter and threaded. Then a bolt can be screwed in to make a secure connection.

Title>TC1: Vester SSTV/FAX480/FAX System Upgrades
Author>Vester, Ben - K3BC
Source>QST Jun 94, pp. 77-78
Abstract>Revisions in the SSTV software described in QST Jan 94.

Digest>Mr. Vester is the author of the article: "An Inexpensive SSTV System", QST Jan 94, pp. 27-29. It describes a software system that can be used with any DOS computer to receive SSTV and FAX. He has continued to add to, and improve, the system and has issued three revision updates. In this letter, he briefly describes Revisions A and B. In a footnote, the editor notes that Revision C had become available by the time this issue of QST went to press.

His instruction manual can be down-loaded from the ARRL Bulletin Board System, phone: (203) 666-0578, file: Vester_B.Zip. The descriptions listed in this letter have little meaning to anyone who is not already using the system. Those who are should down-load the full text from the BBS.

Title>VLF Listening Can Be Rewarding
Author>Fischer, Robert W. - K2ND
Source>QST Jun 94, p. 78
Abstract>Listen to signals below 100KHz. to learn about Sporadic E VHF openings, and also propagation on 80- and 160- meters.

Digest>Mr. Fischer worked for many years with VLF signals from the Omega System (10-14 KHz.) and Loran Systems (100 KHz.). In monitoring signal levels daily, he discovered a close correlation between propagation conditions on VLF and those on the longer HF bands, as well as on the VHF bands.

The omega system is made up of 8 transmitters scattered around the world. Usually, at least three of them are heard at all times. He found Omega propagation closely matches that on 160- and 80-meters over similar paths.

The Loran-C system covers almost the entire Northern Hemisphere and the 100-KHz. signals show both skywave and groundwave characteristics. It is possible to differentiate between the two and close monitoring of the skywave gives a good indication of the availability of Sporadic E clouds, among other characteristics of VHF propagation.

Title>TC3:Relay Chatter
Author>Huston, Jack - W0JAW
Source>QST Jun 94, p. 78
Abstract>Component variation caused a problem in one unit out of many built.

Digest>This letter is from the author of the article: "I Wonder If..." in the New Ham Companion section, QST Nov 93, pp. 72-74. He notes that one builder experienced relay chatter. He found that the problem was caused by component variation and can be corrected by replacing the FET.

FEEDBACK (FB)

Title>FB1:Radio Gear of Yesteryear, QST Mar 94, p. 41
Author>Shrader, Bob - W6BNB
Source>QST Jun 94, p. 78
Abstract>The wave energy from spark transmitters originated in the transformer/capacitor resonant circuit.

Digest>This letter quotes Bill Byron - W7DHD, who pointed out that the primary function of the capacitor across the power transformer in the spark transmitter diagram, Fig. 1, is not just to provide some protection of the transformer. Rather, it provides the power for the wave train which is transmitted during each half-cycle of the power line AC. It is the tuning capacitor of the tank circuit that produces the RF!

NEW HAM COMPANION (NHC)

The New Ham Companion is a regular section of QST. It features articles of primary interest to newcomers to the hobby.

Title>NHC1:You Will Never Forget the First Time...
Author>MacDonald, Michael - N6VIV
Source>QST Jun 94, pp. 58-59
Abstract>First QSO nostalgia.

Digest>This is a description of the first QSO made by the author. He relates the excitement of the event, as well as the pride of achievement after it was made. Most amateurs can remember their first QSTs in similar terms.

Title>NHC2:The Doctor is IN
Author>Various
Source>QST Jun 94, p. 60
Abstract>Questions and Answers of interest to newcomers.

Digest>Questions addressed this month include: the problem of detuning a mobile antenna when a travel trailer is hitched in place; diagnosing a problem in an older transceiver when the TNC failed to decode digital signals; microphonics in direct-conversion receivers; and the functioning of a speech processor during SSB operation.

Title>NHC3:Getting More Replies to Your CW Calls
Author>Brogden, Al - K3KMO
Source>QST Jun 94, p. 61
Abstract>Tips for CW operators.

Digest>In this article, Al Brogdon, Managing Editor of QST, offers the advice of a highly experienced CW operator to help newcomers make more CW QSOs. He describes the advantages of replying to other's CQs, rather than calling it oneself, zero-beating the caller's frequency, structuring the reply, and even a hint concerning how to break into a CQ before it is complete.

Title>NHC4:At the Tone...
Author>Ford, Steve - WB8IMY
Source>QST Jun 94, pp. 62-63
Abstract>Time and other services provided by WWV and WWVH.

Digest>This is a description of the services by WWV and WWVH, the stations operated by the National Institute of Standards and Technology that continuously broadcast precise time signals. WWV is located in Ft. Collins, Colorado, and broadcasts on 2.5-, 5-, 10-, 15-, and 20-MHz. WWVH broadcasts from Kauai, Hawaii on all the same frequencies except 20-MHz.

In addition to time signals, the broadcasts include geophysical alerts, marine storm warnings, omega navigation system status reports, and global positioning system (GPS) status reports.

Title>NHC5:Be a Boneyard PhD
Author>Keith, Larry - KQ4BY
Source>QST Jan 94, pp. 64-67
Abstract>Be smart when shopping for used gear. Here is help.

Digest>This article contains excellent advice for people shopping for used radio gear, especially transceivers.

He suggests avoiding "orphans", i.e. don't buy equipment built by a company that is no longer in the business because spare parts may be hard to obtain. Also, avoid rigs that use sweep tubes in the final amplifier and ones that do not include the WARC bands, since the resale value will suffer on either count.

He recommends consulting product reviews in back issues of QST and also asking opinions of as many fellow hams as possible regarding different models. To get a feel for reasonable price levels, he suggests consulting want ads in QST, in the Ham Trader Yellow Sheets, and the Weekly Ham Trader publications.

Title>NHC6:8-Band Backpacker Special
Author>Andera, Jim - WB0KRX
Source>QST Jun 94 - pp. 68-69
Abstract>A highly portable wire antenna that can be used on any two

bands from 10- to 80-meters.

Digest>Mr. Andera describes a very light-weight antenna that can be rolled up and carried easily, but can be erected to provide a two-band antenna resonant on any two of the HF bands from 80- to 10-meters. It is made as two dipoles fed from a common coax line and spread like a fan. The antenna uses No. 20 wire. and is cut for 40- and 20- meters. Nylon twine provides a combination of support and insulation.

Carried with them are pieces of No. 24 wire, cut to accurate length and with an alligator clip on one end of each, so that they can be clipped onto the ends of either of the two dipoles and resonate as either half- or one-and-a-half-wave dipoles on the respective bands.

A table of accurate dimensions for each of the extensions is included. Two are required for each band, one for each end of the dipole.

Included is a drawing of the suggested center insulator which is fabricated from .062-inch (2.5 mm.) PC board material with the foil removed. It acts as a center insulator, a center support point, and also provides strain relief for the coax.

RADIO TIPS (RT)

These are short items, scattered among the articles in the NEW HAM COMPANION section.

Title>RT1:Buying on the Packet Network
Author>Ford, Steve - WB8IMY
Source>QST Jun 94, p. 67
Abstract>

Digest>Packet radio is a good source for used equipment. Connect to a bulletin board and isse the command:

or
L> FORSALE

Also check DX PacketCluster systems. Connect and send the command:
DIR/NEW
You will receive a list of every message that has been posted since your last access.

GENERAL INTEREST ARTICLES (GP)

Title>St Paul Revisited
Author>Archibald, Fred - VE2SEI
Source>QST Jun 94, pp. 21-23
Abstract>Another dangerous, but successful, DXpedition.

Digest>This is the story of a DXpedition conducted by eight Montreal amateurs to the northern island of St. Paul in the Gulf of St. Lawrence. The island is uninhabited and rocky, so landing and embarking with heavy equipment in heavy seas is difficult and dangerous.

The expeditioners were taken from Dingwall, Nova Scotia to the island by a fisherman in his 35-foot (11-meter) boat in August, 1993. They spent 5 days on the island. They deployed an impressive array of equipment, set up successfully in an abandoned house on the island, and logged 5650 contacts. Most importantly, they successfully brought all their equipment, and themselves, back safely.

Title>GI2:Moonbeams on Montserrat: An EMExpedition
Author>Brittain, Perry - VP2MR/W5STI
Source>QST Jun 94, pp. 47-51
Abstract>Putting Montserrat on the air, EME.

Digest>Mr. Brittain is now a permanent resident of Montserrat, West Indies. He recently invited Gerald Williamson - K5GW, of the Texas Towers Company, to visit him. Mr. Williamson is an enthusiastic earth-moon-earth (EME) operator from his home station in Plano, Texas and volunteered to take a disassembled EME array to Montserrat for an EMExpedition.

In this article, the author describes their first attempts at erecting the four ten-element beams on 17-foot booms in a 2-by-2 configuration, all mounted on a 2-inch (50-cm.) diameter steel mast sunk 3-feet (1-meter) into the soft ground.

After it was up, before being used, it blew over and damaged several pieces of the assembly. Replacements were rapidly sent by air freight from Texas and a new tower support was put up in a much more stable manner. Consequently, before the one-week visit was over Mr. Williamson, using the call sign VP2MBM which belongs to the author's XYL, Martha, succeeded in making a number of contacts with stations in the USA, Canada, Sweden, and Germany. He missed calls from many others because he accidentally blew out both of his receiving preamplifiers and could only hear "big" signals.

Since Mr. Williamson's visit piqued his interest, VP2MR has erected an 80-element array made of 8 ten-element beams on a very substantial tower with remote az-el control, and so Montserrat is now a permanent fixture on EME.

Title>GI3:Wally and Mike: Wally Meets the Internet
Author>Kearman, Jim - KR1S
Source>QST Jun 94, pp. 50-51
Abstract>Internet provides free unlimited communications throughout the world.

Digest>This is a fictional conversation between two hams who are discusssing the Internet, the world-wide communications network that

links the computer networks of almost all of the universities and colleges of the USA with with those of colleges and universities in most other countries of the world. It is not limited only to educational institutions; research-minded companies are also hooked up and, recently, any individual can get access from his home computer by signing up with a company organized for the purpose of providing Internet access for a fee.

Once individuals obtain access to network, an amazing breadth of information sources becomes available to them. The two sources of information of primary interest to radio amateurs are through participation in "newsgroups" and through "E-Mail" correspondence with individuals throughout the world.

I had one back in 1968 - KTI-0078. In Cocoa Fl where I lived we used call signs all the time. I had a Johnson messenger 1 with 5 xtals. It was a tube type radio and would dim the headlights on my car when you talked.

If I remember right the fee was $25.00 and you could have up to 6 units on one license.

Our family had one of the last CB call signs back in the late 1970's.
So many call signs had been issued that FCC had to start issuing call
signs with four letters. We were issued KAAN9730. About a year after
receiving the call, licensing was abolished.

BTW, the licensing fee was $18. (I think.)

Warren Kinninger (wkinning@nyx10.cs.du.edu) wrote:
: Who publishes the Microwave Update ?

The ARRL currently publishes camera ready copy furnished
by a number of the conferences, including the Eastern States
VHF/UHF conference, AMSAT-NA Space symposium, Computer Networking
conference, and Central States VHF conference.

The West Coast conference wasn't able to get it ready in time,
so they printed it on their own this year.

The conference organizers often have copies of the proceedings
for past years, even if we no longer have them.

////////////////////////////////////\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\\

The mexican federation of Ham Radio Experimenters (FEDERACION MEXICANA DE RADIOEXPERIMENTADORES) IARU Member, invites all amateur Radio Operators to our 53rd Annual Convention, which will be held in the beautifull paradise of Puerto Vallarta, Jalisco, Mexico, from October 6th thru 9th.

The Vallarta Fiesta Americana will host this event in its main convention center and exhibit room. Your purchase includes 3 nights and 4 days, free beverages during the lunch and during dinner, as well as daily buffette breakfast and buffette lunch troughout the duration of the convention. To top it off, on the second evening you will enjoy a Mexican Night with folk ballet, mariachi and more features; on the closing evening, dine and dance at the Gala Dinner. Early reservations will give you a prefered rate as indicated.

If you plan to attend with your family, great! Two children can stay for free in each room and children's program are offered. There will also be special entertainment program available for spouses (non ham activities), so everyone can have fun!

Guided tours of Vallarta are available for anyone who is interested in purchasing Mexican arts, crafts, and souvenirs.

During this celebration, the "HAM OF THE YEAR", as well as the "AZTECA" and "AZTECA DE ORO" awards will be presented.

Don't miss the opportunity to enjoy Mexico's most beautifull vacation resort, Puerto Vallarta, and have fun joining our Ham Group from all over the nation.

For further information, please write, fax or email to:

FEDERACION MEXICANA DE RADIOEXPERIMENTADORES, A.C.
Molinos 51, Desp. 307 y 308
Col. Mixcoac, Mexico C.P. 03910

Fax: 273-1019

BBS XE1LM

Internet addres: delamora@mail.internet.com.mx

If you want to get it... right away!

Convention Pass Includes:

Admission to fleamarket, showroom and conferences
Hospitality with all lodgin
Welcome cocktail

Three buffette breakfast
Two buffette lunch
Mexican Night dinner
Gala Dinner

For reservations send your certified check or money order in us currency
to address of the FMRE. Cost are:

BEFORE 8/20/94 395.00
FROM 8/21/94 TO 9/20/94 445.00
AT DOOR (if available) 495.00

Sorry for being a dumbo - my interest has being raised! What is WWV?
Is this a North American only broadcast or can it be received
in Europe? The reason I ask is that I have tuned a short wave radio
in to the bands given and dont hear anything. I am ready to be
laughed off this group !!

: Sandy, my mother lives in a tiny town called Minden, Nevada. Their
: library has copies of QST donated by the local radio club. The pages
: are dog-eared showing lots of use. This is a small town yet those
: QST's are read widely.

Well, isn't that just precious .....

: While visiting the small beach town of Carpenteria last year I went
: to the public library and found QST. Again, this is a small town yet
: those issues showed signs of wear.

: > (Oh boy ..... I'll bet ur gonna tell me about all the non-hams
: >you know who've read an old QST cover-to-cover and came to see the light.

Thanks for confirming it.

: Sheesh yourself. My elmer had stacks of QST's lying around his garage.
: As a young pup I practically memorized them cover-to-cover. Those mags
: along with his encouragement made me a ham.

Now .... this is more like it. Course, I'll bet you didn't just sit in
his garage either ..... get to take a few home at night to peruse, eh?
As a "young pup", betcha also ran down to your local library to look thru
all the back issues as well, huh? I would've too ..... but .... it was
more fun for me to go to the local ham who had them.

: Phooey

Pitooy. Ah yes... diversity of opinion .... ain't it grand?
Well, maybe the original poster of this thread can make up his mind
about what he wants to do with his magazines ..... since their
his to do with as he chooses. He asked for advice from the masses
and we are just two of the more vocal ones.

Cheers/73
Sandy WA6BXH/7J1ABV <slay@netcom.com>

Hi, Roxanne [KD1DN]--

The answer to both questions is "yes" regarding the
SWL cards.

They come in and go out just like the amateur QSL
cards thru the DX bureaus. Similar to the amateur,
too, this applies solely to DX [vs. local stateside]

In <Ctv6IE.4sC@serval.net.wsu.edu> i9261739@wsuaix.csc.wsu.edu (Mike Wallendahl) writes:

>Help!

>I am new to the world of ham radio, and want to get started. I am
>thinking of purchasing a handheld unit, and have just about fallen in
>love with the Alinco DJ-580T. It is a dual band 2M/440MHz unit.

After living with the 580T for a year and a half, I must say that I
really love the ergonomics (mechanical and software) of the unit.

>Before I go out and fork out $380 for this thing I want to know a few things:
>Is Alinco any good? Is there anything the Alinco does not have that I
>might miss if I start using Ham radio frequently? The Alinco comes with
>40 memory channels total for both bands. Is that enough? Should I go up
>$80 more and buy a Kenwood radio instead with more memory channels?

The scanner crowd will say that 40 isn't enough. If your ownly interested
in 2 meter and 70cm repeaters, 3 or 4 police and fire dispatch
frequencies and a NOAA weather channel or two, 40 channels should
be more than enough. It is not a scanner. Scan speed is incredibly
slow (as it is on most amateur HTs). Maybe 3 or 4 channels a second.

If you need more, get the Yaesu FT530. Better yet, get a Standard.
Standards have memory chips that can be installed and, IMO, Standard
is far more rugged and has better RF performance than anyone else
short of Motorola and the other professional rigs.

I'd avoid any used Alinco DJ580Ts. I think Alinco has a quality
control problem. There have been widely varying reports on them
as far as intermod problems and electrical and mechanical assembly
quality. Mine has been rock-solid.

I have also heard from those who say the Yaesu FT530 dual-band HT
is the best thing since sliced bread. Its DOES have a few more
software gizmos, but RF-wise, I don't think it offers much more.

Note that ALL HT's will have intermod problems when you connect
them to the 5/8 wave whip on your car and go cruising through
the RF jungles of big-city business and industrial zones.

If you are going to do a lot of mobile work, have you considered
skipping the HT route and going with a 2-meter mobile. The dual-
band mobiles are a bit expensive for an entry-level ham. You
might still find a new Yaesu FT2400H 50-watt 2-meter mobile
around. AES in Milwaukee is sold out. The replacement for
the FT2400H is the FT2500. I have both. They are excellent

2-meter rigs with a mil-spec mechanical rating. The FT2500 is going for around $350.00.

For a little more than the cost of the 580, you can get the FT2500 and a dual-band mag-mount or trunk-lip mount mobile antenna. Commet, Diamond and ANLI (and a few others) make nice mobile antennas and mounting hardware.

|> rn@cs.brown.edu

I have a 90' Rohn model 25 guyed tower. This supports a Mosley Classic 33 3-element HF yagi and a FO-22 22-element UHF yagi.

I have always considered Rohn to be a quality tower manufacture. The model 25 and 45 are probabally the most popular guyed tower for amateur use. Rohn does have some self supporting towers to 56 feet, but you must be carefull on loading. I do not consider the models 25 and 45 selfsupporting above 30 feet. For the big HF beams I would go with a Rohn 45, but it will cost twice as much as the 25.

As for price, I think I paid about $55 per ten foot section in 1987. I found prices between $55 and $110 per section. The local Ham stores in Ohio provided the lowest price. I was amazed at the range of price. Check mail order. Check ads in QST (like Texas Tower).

I had a commercial installer put the tower up for me. I paid him $700 for job, but did the hole digging and concrete work myself. The base section is in a 2 x 2 foot square hole, 3-feet deep. The guy anchors are in 4-foot holes about half in concrete, 2-foot square.

Rohn has a technical manual that provides design information on all their products. This is a good reference in designing the installation. If you can find their phone number call them and see if you can get a copy. I don't have their address or phone number with me or I would post it.

by the way, I am using Phillystrand non-conductive guys. This is a nice product, but more expensive than the standard galvanized guy wire. If you use galvanized guy wire plan on replacing it every seven to ten years. I know a few people that had tower up over ten years and the guy wires rusted and broke. Phillystrand told me they exptect a 30-year life out of their product. I think I am spelling the name wrong. The tower suppliers in QST sell this stuff also. For guy anchors I went to the junk yard and obtained three 4-inch I-beams, ten foot long. I had a welding shop attach

a plate with three holes for the guy turnbuckels. I guy my 90-foot tower at 30, 60, and 90 feet. Angle on the top guy wire is under 60 degrees.

Use a trust bearing at the top to take the load off of the rotor. Ground the tower and all coax lines where they leave the tower.

This tower has survived one lightning strike and 60 MPH wind gusts

I recently bought a FT-530, and I really like it. I heard lots of good things about the radio, and very few--if any--negatives.

As for the price, I bought mine from AES, and the price was less than $400.

1849. Repeaters in Holland ?

Message-ID: <egela003.775839471@maroon>
Source record: 262406

I am currently preparing for the Technician no-code FCC amateur liscence. If anyone has passed this examination and moved on to a higher class, I would like to know whether it is really worth it to spend all that time learning the code. I am mainly interested in microwave data transfer right now, but I may like to get into DX someday. (???). I have successfully DXed with my CB & a homebrew antenna on the standard 4 watts, but don't care for the CB crowd much. I have listened to the 2 meter band on my scanner, but can't quite get a good feel for what it's all about. I have been fooling around with circuts and electronics for about eight years now, and really find an interest in making antennas, circuts, etc. Any opinions (especially about the value of a higher liscence) appreciated.

PS I am having a hard time finding out where to take my technician no code examination in the Minneapolis area. Anyone know who to contact?

It all depends on what you want to do. If you want to work CW you definitely need it. (That's a given...) If you want to work any HF, you'll need to learn it. If you want to become a VE, you'll need it. For DX in the HF bands, you'll need it.

However, if you just want to work on VHF and UHF, and you don't want to do anything the Technician license does not allow, then there is no reason to learn the code--unless you want to.

Personally, I think you should at least try to learn the code. You might surprise yourself and enjoy it. (Then, again, maybe not.) I found after learning it, and getting faster, that I really enjoy it. This is not true for everyone, but it is for me.

As for who to contact about a testing time, you can try the ARRL. They should know when the ARRL VE teams in your area will be giving exams.

Source record: 262410

When you install an N connector on the end of a piece of Belden 9913, what do you do with the foil?

According to the guy who is attempting this, the braid has someplace to go in the connector, but the outer foil doesn't, and he's concerned about just letting it float.

I'm an HF person, so I don't use N connectors myself, but the problem prompted a long discussion on the local repeater, with no good answer, so it seems appropriate for this group.

> anyone have some information on this? Or was I hearing things
> (again!)?

It's been done many times. In the "good old days", a lightbulb was frequently used as a dummy load as well as a visual indicator of power output from a transmitter.

Inasmuch as the lightbulb is poorly shielded, radiation did (does) occur thereby making two-way contacts possible.

How far? As with any contact, depends on propagation characteristics and band conditions.

>any worse than the rest of the population?

If so, I'd have to guess it is simply a matter of a higher percentage of amateur radio operators owning/using computers than the population at large. With the vast amount of public domain and shareware (and note those are 2 different categories!) available, I don't see any rational reason for stealing commercial software! And if the commercial stuff does what you want, then you ought to buy it to get the "clean" software, the documentation (you'll need it to take advantage of the features that go beyond the default set), the tech support, and to help ensure that the company stays finacially sound to keep up the good work that caused you to buy in the first place.

Maybe I'm wierd, but I even register shareware games my kids pick up and use (if they try it and trash it, the shareware company failed to make a "sell"). And if I'm trying out some piece of shareware and its "time" expires before catching my continuing interest, I del the thing from my hard disk: I haven't got space to waste with stuff I'm not using!

Granted, this was SSB, on HF, but...
I answered a CQ/QRP call on 10M about 10AM EDT on a quiet weekday morning
about 3 weeks ago. I worked a Missouri station, from Eastern PA easily with 5
watts. He reduced power to 100mw, and he was still FB copy, although no meter.
He then tried 20mw. He dropped, but was still very readable. In case
you think we both had super stations, I run a low G5RV dipole and he was using a
slinky dipole. My rig was Yaesu FT747GX. I've got his QSL at home,
congratulating me on my good hearing, at 8000 mi/watt!

1863. Re: Ramsey SlyFox

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-02 18:18:09 UTC
From: JoeMoell@cup.portal.com
Message-ID: <119018@cup.portal.com>
Source record: 262415

Responding to:
7/31/94 23:30 31/1364 Cecil_A_Moore@ccm.ch.intel.com:

>You admit in the article that you were _not_ at resonance at that
>time.

No such admission. The final capacitor was peaked properly with all coils adjusted exactly as described in the manual. L4, the coil that actually caused the problem, was in the low-pass filter, not the final tank.

>When tuning a tank circuit, if the variable cap is at either min
>or max, dollars to donuts you are not at resonance.

As a builder of many VHF transmitter kits, plus a few rigs from scratch, I'm well aware of that, tho sometimes it's hard to tell on those tiny little trimmers where the max/min points are <g>.

>My apology, I may have been hasty in the assumption that the SlyFox
>manual was just like the FX manual. I haven't seen a SlyFox manual.

So you have built a Ramsey two meter rig? Tell me about the manual's instructions for final tuneup. I'm curious how it differs from the SlyFox. Did you check it with a spectrum analyzer?

>The original problem was that based on a prepublication leak of your
>article,

I didn't see that post. Can you tell me who posted it? I wonder if the writer was able to read the whole article in advance or just heard something by word of mouth.

>someone said the SlyFox didn't meet FCC specs, and it does
>when tuned properly.

True, and the big problem is that the manual does not give sufficient info to assure that it will be tuned properly. I stand by that.

>I think your review was subjective rather than objective

Please explain that remark. I made no judgement or conclusions, just stated my experiences factually. The only comment that seems subjectively critical to me was my disagreement with Ramsey's suggestion to poorly equipped hams that a light bulb is sufficient as a tuning indicator. But I value your opinion.

>but I admit to being old-fasioned... real hams don't cry.

I'm not crying for me. My concern is for the ham without access to a wattmeter and spectrum analyzer who builds this kit, follows the instructions

to the letter, and ends up with a dirty signal. The bottom line is that if you don't properly tune the low pass filter on this rig (and there are no instructions for doing so), there is a good chance this will happen. What's more, the builder may never realize it.

Hi DX-world!

I found couple of call signs from our radio club's ancient logs and don't know
on which DXCC-countries they count for. So if you know please send a message
to me. The QSOs are:

VK0E 14.Sep.1987 at 0944Z on 14 CW via UA1AFM, is this Antarctica?

KC6SG 23.Oct.1987 at 0951Z on 21 CW USA or Belau?

ZL0AFZ/9 12.Feb.1988 at 0823Z on 21 CW Which DXCC-country?

Tnx for possible help and 73 de Simo/OH2LRE

In article <CtvJr3.Mr@serval.net.wsu.edu>, i9261739@wsuaix.csc.wsu.edu (Mike Wallendahl) says:

>I got lots of replies to my last query about the Alinco, and now I'm
>leaning towards maybe a Yaesu. Anyone have any horrible experiences with
>this radio?
>
>I found it for $435. That a good price?

Mike,

I have been using a FT-530 for about a year now and think it is the best dual band HT available right now. It has extended RX/TX mods available that are easy to do.

Service is good--I dropped mine off of the roof while putting up a new HF antenna, it hit on the blacktop and broke the BNC antenna connection. Yaesu fixed it under warrenty even though I told them I dropped it. It was back in my hands in 10 days.

You can beat the price at AES.

1866. Car warrantee and 2m radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-02 19:25:19 UTC
From: david@bu.edu
Message-ID: <31m6iv$f94@news.bu.edu>
Source record: 262416

I am in the process of looking for a new car and someone brought up the possibility that installing a 2m rig might void a new car warrantee. His thought was that the radio might do damage to the cars computer and that having the radio might invalidate a provision of the warrantee.

I recently acquired an Icom IC-28h that puts out 45 watts at high power. I notice interference in my car radio when transmitting at high power, so there is some leakage going on. Do I have anything to worry about?

I guess there are two questions here: "Is there a chance of causing damage?" and "Am I in trouble just by putting it in the car?"

BTW I'm looking at the 94 Accord, Mazda 626, Mitsubishi Gallant, Taurus, Subaru Legacy, and Camry.

I have a hard time believing that it'll be a problem, but this is the place to ask. Please respond directly via e-mail. Thanks.

I used to demonstrate how to tune up a transmitter to my novice classes
in the "tube days. " A 100 watt bulb loaded nicely and you could see the
bulb brighten as the current dips. I actually did have a few short
distance QSOs on 10 at this time, even though I was in a concrete
building and the other station was several miles away.
This might also me a good demonstration of how to use a tuner.

I have also held QSOs with both stations on dummy loads.
I'm still working on my WAD (Worked All Dummies) award, although the
number of dummies to work seems to increase each year.

Some other fun antennas are bed springs, metal gutters, aluminum window
screens and metallized mylar kite strings (except during thinder storms(

Anyway, keep on experimenting. That's what HR is all about

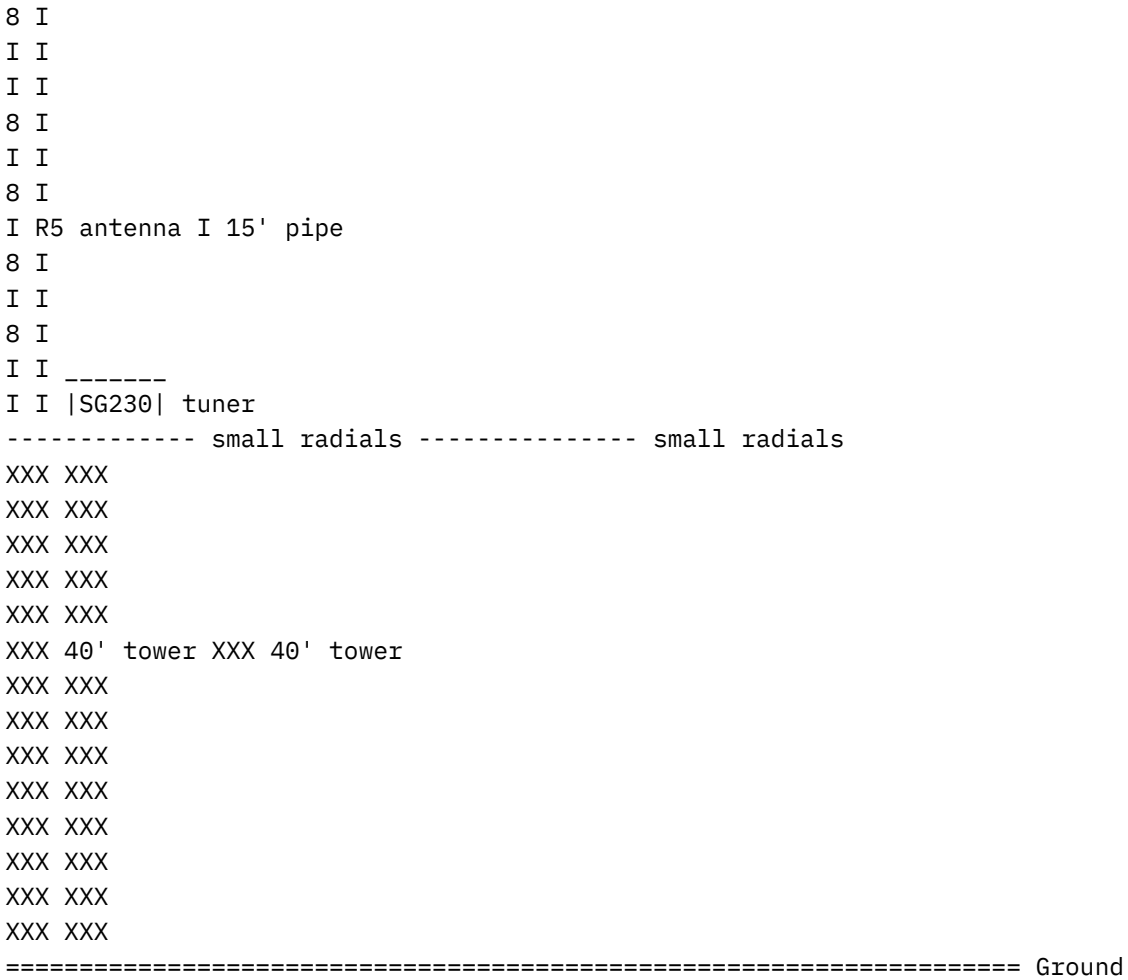
I would like to get your opinion on an HF antenna setup I would like to do.
I want to operate my ft890at on 20, 17 and 15 meters. The ft890at have
an automatic antenna tuner built in and have 100 watts output.
I have a small lot with a 40 ft tower on one side. No room for a beam,
so I am considering a vertical like the R5. My other choice would be
an insulated pipe on top of the tower connected to a remote antenna tuner
like the SGC 230.

Choice A Choice B



According to you, what setup would give me the better results?

Thanks a lot for your help,

ARLX023 Marconi widow dies

Marconi widow dies

The widow of Guglielmo Marconi has died. The Marchesa M. Cristina
Bezzi Scali died July 15, 1994, at age 94.

The two were married in 1927. Marconi lived another 10 years, dying
in 1937 at age 63.

The couple had a daughter, Elettra, who was baptized by Cardinal
Eugeni Pacelli, who would later become Pope Pius XII. Elettra's
godmother was Elena di Savoia, queen of Italy.

According to Pat Ciancarini, I0KHP, Elettra will continue the
family's work in preparing for ''1995, Year of Guglielmo Marconi,''
the centennial celebration of Marconi's first wireless telegraph.

The funeral was held July 18. Among those attending were several
bishops from the Sovereign Military Order of Malta.

SYNOPSIS OF ACTIVITY

Solar activity was very low. The largest flare of the day
was a B7.2 at 01/1233Z.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet to unsettled
levels for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet. Unsettled to active conditions may appear
on day three due to a favorably positioned coronal hole.

Event probabilities 02 aug-04 aug

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 02 aug-04 aug

A. Middle Latitudes
Active 15/15/30
Minor Storm 10/10/15
Major-Severe Storm 01/01/05

B. High Latitudes
Active 20/20/30
Minor Storm 10/10/15
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
No changes in propagation are expected until about 04 August
when a recurrent disturbance should result in minor signal
degradation over the high and polar latitude paths,
particularly for transauroral night-sector circuits. Most
other regions should see near-normal propagation.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Howdy,
I've had a Novice license since the mid 80's and have recently started to think about getting a Technician Class License.

I notice that there is now a NO-CODE Tech. License....is there an advantage to me having passed the 5 wpm test?

I always thought the code test kept HAM from becoming like CB (I"ve really been out of touch so if this is a sore issue, please give me some slack)

Obviously, I have no room to make any comments...all I want know is there a separate license for Technician with code?

Thanks in Advance

Lou KA6UYK

>>: OK, I'm at my wits end. I have tried to locate a WWV receiver

The last Radio Shack flyer I received shows their low end multiband
portable at $39.00. This appears to be a newer version of a $49
Sangean portable I purchased shortly before Desert Storm. My
radio was almost dead on SW before I tweeked it up. Now it is
about as sensitive as other tiny radios, and better sounding than
some. It might even be possible to realign the set so one can
get WWV at the same spot on the (original) 49, 31, and 19 meter bands.
And if you break it you haven't ransomed your firstborn.

IMHO, the gist of the original post was, "the SlyFox doesn't meet FCC specs
and there is a 73 article on the way that will verify that fact!". It was
posted so far in advance of your article that it had expired by the time
I got my 73 and read the article. It was that original posting which
prompted the start of this thread, not your article.

>>CM someone said the SlyFox didn't meet FCC specs, and it does
>>CM when tuned properly.

>JM True, and the big problem is that the manual does not give sufficient info
>JM to assure that it will be tuned properly. I stand by that.

Then get with the manufacturer and fix the problem! After all it is simply
a paper problem. The manual is not fixed in concrete.

In the past, (sigh), a reputable magazine would have immediately
notified the kit manufacturer of any problems with the kit (including the
manual). They would not have published something designed to hurt sales
unless the company refused to fix the problem. You could have been of
service to the ham community instead of a disservice... amateurs tend to
be _very_ unprofessional. ;-)

>>CM I think your review was subjective rather than objective

If it had been me reviewing the kit, I would have immediately notified
the company that the manual needs improving. I would have published the
suggested manual improvements in the article and posted them on
oak.oakland.edu (did you?) I would not have taken a "poor me" attitude.
There is nothing wrong with the kit as far as I can tell, just with the
manual. An addendum mailed to previous purchasers and included in the
manual solves the problem.

>>CM but I admit to being old-fashioned... real hams don't cry.

>JM 73 de Joe K0OV

The kit builder does _not_ need a spectrum analyzer! He probably does need a wattmeter, available from Radio shack for peanuts or the nearest Elmer for nothing. He also needs an 8.5"x11" piece of paper explaining the problems that a brand new manual may have. What he does not need is a person writing for a popular ham magazine scaring him away from a profitable learning experience by a biased review of a reasonable product.

Again, there appears to be nothing wrong with the SlyFox if it is tuned properly. (1) Spread the coils to raise the low-pass filter frequency above 150 MHz. (2) Buy, beg, borrow, or steal a Radio Shack (or better) VHF watt-meter and tune the transmitter for close to 5 watts output. (3) Enjoy your foxhunt.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 02/2330Z AUGUST 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 02 AUGUST AND FORECAST FOR 03 AUGUST - 05 AUGUST

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 75/13

GOES satellite data for 01 Aug
Daily Proton Fluence >1 MeV: 9.2E+05
Daily Proton Fluence >10 MeV: 1.3E+04
Daily Electron Fluence >2 MeV: 3.1E+07
X-ray background: A1.5
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
03 Aug 04 Aug 05 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 03 Aug: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 01 Aug
Learmonth 3 2111 1111
Fredericksburg 4 8
Planetary 6 7

Observed Kp for 01 Aug: 3222 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
03 Aug 16 Unsettled
04 Aug 10 Quiet to unsettled
05 Aug 10 Quiet to unsettled
COMMENT: Mild coronal hole induced activity expected August 3.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

02 Aug normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 Aug normal fair poor
04 Aug normal normal fair
05 Aug normal normal fair
COMMENT: High lats may experience degraded conditions on August 3.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
02 Aug 25 near predicted monthly values

Predicted Monthly T-index for August: 20

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
03 Aug 20 Near predicted monthly values
04 Aug 25 Near predicted monthly values
05 Aug 25 Near predicted monthly values

>laughed off this group !!

When conditions are right I can hear some of the other stations
on the 5, 10, or 15 mHz frequencies underneath WWV. You might
try listening just before the hour or half hour on whatever
frequency favors Colorado USA or Hawaii at the time. Try
turning up the volume and listening for faint background voices
as you should have European stations on these frequencies.

Hey Bob!

Does this generation still use traverse or curtain rods? I've used a Dentron
transmatch before and talked to California from Florida on 10. Of course a
really active set of sunspots helps immensely. We'll have to wait a few years
to try that again.

>>have to re-teach hams the 'basic physics' that they had to know to get
>>their ham licenses, isn't it? Greg

>Hi again Greg, Obviously, John functions on an algebraic plane so he
>no doubt meant to say, "add more (negative) turns". ;-)

Oh boy. It is arguable if Ramsey deserves some of the flames hurled
at him. He definitely does not deserve this one!

Look, I interpret what John Ramsey wrote as: Ramsey purposely made the
coils a little larger than neccessary, so that simpletons could tune
the stuff they had built with very little trouble. Had he made the
coils a little smaller, the purchaser would have had to add more turns,
which is much more difficult to do, to achieve equivalent ability
to tune. Thus

>> it's easier to spread the coils a bit than to have to add more turns!

If you find John's explanation so hard to understand, how did you
blokes understand Icom manuals, anyway? :-)

The 3-Hr Ap Indices for 30 JUL 94 are: 20 12 8 6 6 8 10 12
Greater than 2 MeV Electron Fluence for 31 JUL is: 2.7E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. A Type II sweep was
reported by the Sagamore Hill and San Vito observatories at
31/1029Z. Shock velocity was estimated at 1500 km/sec. No
x-ray or optical correlation was indicated with this sweep.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at mostly quiet to
unsettled levels for the past 24 hours. The GT 2 MeV energetic

electron flux was mostly normal to moderate. A brief period of high flux readings was recorded early in the period from 30/2100Z to 30/2400Z.

Geophysical activity forecast: the geomagnetic field is expected to be mostly quiet to unsettled for the next three days.

Event probabilities 01 aug-03 aug

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 01 aug-03 aug

A. Middle Latitudes
Active 10/10/20
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 10/10/25
Minor Storm 05/05/05
Major-Severe Storm 01/01/05

HF propagation conditions were normal over all regions.
No changes are expected over the next 2 to 3 days, although there is a slight chance high latitudes may begin to see minor signal degradation on 03 or 04 August in response to recurrent geomagnetic activity.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

1886. Periodic Announcement - ARRL Email Information Server (info@arrl.org)

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-03 03:00:03 UTC
From: mtracy@arrl.org
Message-ID: <rec.radio.info-arrl.email.info_775882802@ve6mgs.ampr.ab.ca>
Source record: 262159
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.info

Periodic Announcement - ARRL Email Information Server (info@arrl.org)

The services that the ARRL provides via the internet include the
Email Information Server and the Technical Information Service.
The Information Server is an automated mail server that gives you
access to many of information files relating to various facets of
Amateur Radio. You can retrieve any or all of these files by
sending an email message to info@arrl.org here at ARRL HQ.
Each file you request is then mailed to you automatically.

To use it, mail messages to:

info@arrl.org

Each line of the message body should contain a command as shown below.
The subject of your message is not processed and may be omitted. You
may place as many commands in a message as you want. The files you
request will be sent to you in separate messages. Only ASCII text
files are supported.

Valid INFO commands:

reply <address> (may be needed - see below for explanation)
help
index
send FILENAME (example: send prospect.txt)
quit

In the above message example, "help" retrieves a brief set of
instructions for info, "index" retrieves a list of available files
and "send prospect.txt" retrieves a text file containing information
on becoming a radio amateur.

Note to users with FTP capability: All of these files are also
available by anonymous ftp to oak.oakland.edu in the
pub/hamradio/arrl/infoserver area. Retrieve the file index.txt
in the /league sub-directory for a complete listing of available
files.

If you want to retrieve several text files with one message, use a
separate line for each "send filename" request.

Your From: field or Reply-to: field in your header should contain a
valid Internet address, including full domain name. If your From:
field does not contain a valid Internet address, the answer will not
reach you. If this is the case, then use the reply command as shown

above. When needed, this command should always be the first command in your message.

IMPORTANT: Please use the quit command in your message. This will prevent processing errors from message signatures.

PLEASE NOTE!: This is an automated system not capable of handling written requests. Any questions on the info-server or the content of any of its files should be directed to mtracy@arrl.org.

ALSO NOTE!: Do *NOT* reply to messages sent from info@arrl.org - the reply address is redirected to keep bounced messages from endlessly looping. Write a new message to info@arrl.org instead.

The Technical Information Service gives League members on the internet better access to the knowledgeable technical staff here at ARRL HQ. Questions relating to Amateur Radio and related technical topics are welcome. To use this service, send a normal e-mail message to tis@arrl.org with your question spelled out in plain english. For best service, be as specific as possible and keep your line length in messages to a maximum of 80 characters. Due to personnel limitations, priority will be given to questions from League members.

Best Regards,

Michael Tracy, KC1SX, ARRL Technical Information Services Coordinator
(e-mail mtracy@arrl.org)

Sample of files available from INFO: (There are lots more!)

Note - If you are not yet an Amateur Radio operator retrieve the file prospect (send prospect) for information on how to easily get started in this fun hobby.

>
Haven't been following this thread till now, but here is an
additional factoid. In 1959, when the FCC first unleashed the
Class D Citizens Band (Radio for Everyone!), the highly-paid
lawyers apparently were asleep. Licenses were mandatory, and
the application forms were either provided with the equipment
or you had to send to the FCC to get them. The callsigns
were assigned by a scheme in which the prefix was the
FCC radio district, a number, followed by a W and a number.
The TV shop I worked for (my elmers, W8FBX and K8UOF hired me
there, thanks guys!) had an early call, 19W3091, I believe.
Shortly thereafter, all CB calls had to be reassigned.
A 19W, etc call did not fall within ITU guidelines for a
proper US callsign. The KBXX2211 series then was instituted.
By then many operators had discovered leenyars. The FCC gave up.

QRZ Ham Radio CDROM V3 (Summer 1994) Now Available

Well, it's finally ready and there are several new developments on
this latest edition. There's a completely new Windows interface
program with tons of new features, Canada, US, UK and Italy callsigns,
lots of new shareware files, OS/2, AIX, and SunOS callbook executables,
and a new BEST OF DX QSL CARD contest where we'll be accepting cards
from around the world to be included in the next editon.

The latest May 10, 1994 FCC database is here which includes over 643,000
US callsigns. In all, over 750,000 callsigns are now on the disc.

And also for the first time, a fully documented Windows .DLL library
interface which allows custom callbook application development in both
C and in Visual Basic - with extensive help files.

The price remains unchanged and available to all internet readers
direct from the author.

For an automatic reply of ordering information send e-mail to:

info@qrz.com

1889. Re: Car warrantee and 2m radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-03 03:43:24 UTC
From: benacp@netcom.com
Message-ID: <benacpCtxx0C.JBw@netcom.com>
Source record: 262341

David,
I not only had my 2m rig in the car but I have 155Mhz radio in my car
scanner under the dash and Green Light on my roof (Volunteer Paramedic).
None of these devices voided my warantee or ruined my cars computer.
Yours cars computer get more sh*t from that engine then it ever will from
your 2m rig.

So relax and enjoy your car and your hobby.

Pete, N2BLY

David Gagnon (david@bu.edu) wrote:

: I am in the process of looking for a new car and someone brought up the
: possibility that installing a 2m rig might void a new car warrantee. His
: thought was that the radio might do damage to the cars computer and that
: having the radio might invalidate a provision of the warrantee.

: I recently acquired an Icom IC-28h that puts out 45 watts at high power.
: I notice interference in my car radio when transmitting at high power, so
: there is some leakage going on. Do I have anything to worry about?

: I guess there are two questions here: "Is there a chance of causing damage?"

Maybe he is referring to the widespread use of TheNet, a ripoff of WA8DED's copyrighted NetROM software. Within a short time after TheNet's appearance, most new digipeaters were using it to avoid paying for a legal copy.

Needless to say, WA8DED has not since written any new amateur radio software...

Ron Raikes' (WA8DED) strongarm tactics - including nearly getting the JPL ARC shut down - as well as his utter refusal to provide any proof of the accusation until well after the issue had been highly polarized didn't help his cause any, either.

>Needless to say, WA8DED has not since written any new amateur radio
>software...

Personally, I'll trade that for an active, thriving JPL ARC. Ron gets no sympathy from me.

It's a riot listening to 5, 10, and 15 MHz out here in the Central
Pacific! There's about a dozen countries around the Pacific rim that
transmit time signals on those frequencies; what a mess listening
to them all ID, and the combined tones sound like a piano with all
the keys depressed.

In article <31m6iv$f94@news.bu.edu> david@bu.edu (David Gagnon) writes:

I am in the process of looking for a new car and someone brought up the
possibility that installing a 2m rig might void a new car warrantee. His
thought was that the radio might do damage to the cars computer and that
having the radio might invalidate a provision of the warrantee.

It's not a problem with GM products. They even publish a nice pamphlet
describing how you ought to go about installing the radio for least
interference. GM has provided vehicles for mobile communications
activities for as long as I can remember and doesn't want to loose that
business.

Send me a SASE and I'll send you a copy.
Val Breault
8101 Warren Blvd.
Center Line, MI 48015

I recently acquired an Icom IC-28h that puts out 45 watts at high power.

Nice rig. I think I've fallen in love with mine. :-)

BTW I'm looking at the 94 Accord, Mazda 626, Mitsubishi Gallant, Taurus,
Subaru Legacy, and Camry.

Ask your salesperson for hard proof that the installation will be okay.
I've heard that installing a mobile radio voids the warranty on some
manufacturers vehicles.

I have a hard time believing that it'll be a problem, but this is the place
to ask. Please respond directly via e-mail. Thanks.

Okay. The rest of you folks please pretend you didn't read this. :-)

>piracy that occurs in the Amateur Radio market."
>
>Without implicating any specific person, is this valid? Are hams really
>any worse than the rest of the population?

I think it's fair to say that hams *are* more experimentally inclined
than the general population, most of the general population are still
staring at the 12:00 flashing on their VCRs. However, I don't think
hams are much different from the average technoid computer user. Many
hams are hackers (in the original good meaning of the term). They are
going to want either source code, or they're going to disassemble the
binary to see how it works. And they are likely to want to tinker
with the code. Then they'll want to share that knowledge with their
fellows.

Because of the experimental nature of amateur radio, I prefer not
to use commercial software for my amateur activities. That's why
when the Netrom-theNet controversy boiled up I went another way,
using the KA9Q code as switch code. Yeah, it meant a PC on the
mountain, but it gave me more flexibility to experiment. And that's
what it's all about for me.

When I do buy commercial software, I avoid software with copy
protection or restrictive licensing. I'll pay a book price for
useful software whose author treats it like a book in his license
agreement. I won't pay exorbitant prices for buggy software with
no support and lock and key licensing. It seems that most software
marketed in the latter way has fallen by the wayside because others
feel the same way I do. When most software authors complain about
piracy, it's usually just imaginary sales that they are trying to
tally. The ones screaming piracy the loudest probably have software
priced such that they aren't going to get many legitimate sales
anyway. Those with more realistic pricing don't seem to have as
much complaint about piracy, and their sales are larger too.

>liscence) appreciated.

I've been licensed 30 years, and held what was once the top license
until the FCC changed the rules of the game. I've tried most aspects
of amateur radio at one time or the other. You can't really know what
aspect of amateur radio is going to be most attractive to you until
you try it.

The Tech license opens a lot of doors for you, and may be exactly what
you need for what you want to do. However, if you do find you want to
explore HF, you currently do have to deal with the manual Morse testing
requirement. I'd suggest getting the Tech and using that to do your
initial exploration of amateur radio. If HF operation still seems like
it might be attractive, buy a shortwave receiver and listen for a while.

If you get excited by what you hear, then you might want to tackle the
code to 5 WPM. That'll get you a taste of HF operating, and if actual
on the air contacts at HF excite you, then you'll want to push on to
General, Advanced, or Extra to get more HF frequencies. Extra isn't
very attractive because you don't get much for the pain of dealing with
an archaic 20 WPM manual Morse test. Advanced is the best value in terms
of priviledges. However you may find Morse easy and fun (you may have a
wreck on the way to the test session too, IMHO the odds are about the same
as your finding manual Morse fun). Anyway, give it a try, you might be
one of those rare people who have the idiot savant talent to be a natural
modem. You can't know until you try.

>PS I am having a hard time finding out where to take my technician no
>code examination in the Minneapolis area. Anyone know who to contact?

Contact the ARRL. They have lists of test sessions in your area, and who
to contact to arrange your test.

See if they'll let you test drive the vehicle over the weekend. Put all
the gear you're going to use into the vehicle, put up mag mount or trunk
mount antennas, and QSO-away at full power driving around your neighborhood.
If the vehicle dies, catch a ride home, pull out the gear, call the dealer
and tell him they've got a DOA vehicle to pick up! Just a sly suggestion,
a friend did this before he picked up his Bronco II and it worked fine,
so he finalized the deal.

WWV is the US National Institute of Standards and Technology's shortwave time and frequency station. (NIST used to be NBS, the National Bureau of Standards.) It broadcasts from Fort Collins Colorado. There is also a WWVH in Hawaii sharing the same frequencies. WWV has a male voice while WWVH has a female voice. You can sometimes hear both. Neither runs at the power level of international broadcasters, so you may have difficulty receiving them in Europe without a good receiver and antenna (and having the propagation gods smiling on you).

>to me having passed the 5 wpm test?

Yes, it qualifies you for the Tech Plus license which has limited HF priviledges, including voice on a segment of 10 meters and all of your current Novice CW segments.

>I always thought the code test kept HAM from becoming like CB (I"ve
>really been out of touch so if this is a sore issue, please give me some slack)

It's a very sore issue, off to policy with you. :-)

>Obviously, I have no room to make any comments...all I want know is there a
>separate license for Technician with code?

The FCC initially said that there wouldn't be a separate license for Tech with code, just keep your proof you passed a 5 WPM exam forever and go ahead and use the HF slivers. Now, however, it's reported that the new computer system at the FCC is allowing them to print Tech Plus on licenses of those with proof of passing a 5 WPM exam. If you haven't passed a 5 WPM exam, you're limited to the frequencies above 30 MHz and don't get the Plus printed on your Tech license.

ARLB065 FCC plans to reorganize

ZCZC AG30
QST de W1AW
ARRL Bulletin 65 ARLB065
>From ARRL Headquarters
Newington CT August 3, 1994
To all radio amateurs

SB QST ARL ARLB065
ARLB065 FCC plans to reorganize

The FCC has proposed to reorganize several of its bureaus and offices. A new Wireless Telecommunications Bureau is to have as a co-deputy chief Ralph Haller, who currently is chief of the Private Radio Bureau and is well known to amateurs.

Richard M. Smith, now head of the Field Operations Bureau, is to be chief of a new Office of Engineering and Technology.

Beverly Baker, who is now deputy chief of the Private Radio Bureau, is to become chief of the Field Operations Bureau.

FCC Chairman Reed Hundt said, in announcing the proposed reorganization, that wireless and international were the areas calling for the ''biggest changes.'' He said that personal communications systems and other emerging technologies made a Wireless Bureau necessary.

Hundt said that an International Bureau ''will better meet the challenges ahead as the FCC continues its role in international telecommunications, working with the Department of State and National Telecommunications and Information Administration (NTIA) in the promotion of the Global Information Infrastructure.''

Scott Blake Harris is to be chief of the new International Bureau. He currently is the chief of the Office of International Communications.

The reorganization will become effective when formal Commission and Congressional approval has been obtained, as well as approval of the labor union representing FCC employees.

Every time I hear about this I have to chuckle, as if these car
manufacturers think that outside RF somehow stops at the boundary of
their vehicle.

If the computer is so prone to damage from large RF fields and installing
a radio in your car may cause damage, according to the manufacturer, tell
the manufacturer that you're not going to purchase the car. Tell them
"gee, I wouldn't want to have my computer fried by some CB radio operator
in the car next to me running an illegal 1000 watt amplifier." See how
quick they change their story...

Anyone out there had any luck in increasing the transmit range on uhf on their yaesu 530? It stops just shy of what I need. I'd appreciate a copy of the vco tuning procedure if anyone has it.

thanks,
ryan

Source record: 262368

Fellow Amateurs,

Does anyone have any information on the mods for the ICOM 3230 dualband transciever? I found some for the 2410 sister unit, but it doesn't appear to be the same. I'd be interested in any comments from mod advice to performance comments. Please Email comments to ==> dginsberg@gte.com

>
>I guess there are two questions here: "Is there a chance of causing damage?"
>and "Am I in trouble just by putting it in the car?"
>
>BTW I'm looking at the 94 Accord, Mazda 626, Mitsubishi Gallant, Taurus,
>Subaru Legacy, and Camry.
>

There has been a number of problems with the installation of ham radio
in the newer automobiles.

One of the known offenders is the Toyota Camry. One poor guy reported
that the engine computer in his Camry was blown when he transmitted.
The repair WAS NOT covered under his new car warranty, since there was
a caveat in the owner's manual. The bill was about $1200 for the
computer plus labor for installation (OUCH!).

Recently, I purchased a new Subaru Impreza. I specifically asked the
salesman and the service manager whether there was any known problem
with transmitter installation in the car, before I signed the deal.
Both assured me that there would be no problem. I took delivery of
the car. Searched the owner's manual. Found (almost hidden) words
to the effect that installation of any transmitter must follow Subaru
guidelines. Got the service manager to contact the factory rep in the
U.S. After several weeks, I got a reply stating that I could install
my 2-meter rig, but that all wiring must be located on the side of the
engine compartment away from all engine wiring. I haven't done the
installation yet.

The basic advice I can give is that the current breed of cars with
engine computers are possibly susceptable to damage from RF radiation.
Talk to the service manager at your preferred dealership before buying.
Demand to be allowed to read the owner's manual before you buy. If
you really like a certain car and there is any suspicion in your mind
that you could have a problem, get the dealership to contact the
factory rep to get answers. Finally, try to get the dealership to
sign a note of responsibility stating that they will eat any repair
costs in the event of failure (good luck on THAT!).

Otherwise, use good electrical practice for installation. Run power
leads directly from the battery, preferably with capacitive bypassing

to the car frame at the battery posts. Be sure that the rig is WELL grounded inside the car (almost impossible on today's plastic dashboards). Stripping the braid off an old piece of coax and slipping it over the rig's power leads is highly recommended, with the braid bonded to the car frame. Also, keep the antenna feed coax away from anything electrical in the car.

I really think that the problems which have been reported on the nets might have been caused by poor installation practices such as plugging the rig into the cigarette lighter, lack of rig grounding, and so forth.

Best of luck with the new wheels!!

Ken Stuart, W3VVN
kstuart@oasys.dt.navy.mil

p.s. - The Navy had no input to this discourse, and doesn't believe half of what I say anyway.

WWV is the National Institute of Standards and Technology time standard broadcasting on 2.5, 5, 10, 15 and 20 Mhz providing time of day, standard time intervals, and other related information. Inquiries regarding these... (oops, I got carried away).

It is generally available only in the U.S. Several other countries have their own time signals on these frequencies. I have a Heathkit GCW-1001 digital clock which receives a 100Hz sub-carrier and keeps the clock locked on time. I used it to keep my Unix system and LAN clocks correct.

>
>Thanks in Advance
>
>Lou KA6UYK
The answer to your question in a nutshell is YES! There is an advantage to having the 5wpm code and a techician license. You get to talk on 10 meter phone from 28.300 - 28.500 mhz. And you have data access on 28.100 - 28.300 mhz. That means you can run HF packet, rtty, pactor, etc.
Of course you can transmit CW on any of these freqs. My advice, go ahead and upgrade. Then after 17 weeks, (yep that's how long it takes now) you will get your new license that says: TECH PLUS (yes that's what it says).
Opps almost forget. With a tech plus license you also get 2 meter and 220 and 440 and 1.2 ghz. But you will have to sign Temporary KT on those as well as 10 meters until you get your new license.
Have fun and upgrade. Next step after that one is General! Then the bands really open up.
Hope to hear you on the air (10 meters) soon.

>with no problems.
>
>..Neil, N3DF

The 520S is a good, stable rig, sutiable for both fixed and bovile
operation. I used one for years. You should be able to get one for
about $300.
There are ony 3 tubes in it, a pair of 6146Bs and a driver.
Tuning them up is no big deal and you can run them at up to a 3:1 SWR
with no problem.

Good luck.

I've put PL-259's on the end of 9913 a couple of times, and I just ground down the center conductor to fit the center-pin hole. Not sure if my friend used the special 9913 N connector, or something similar to this.

(Lou Duncan) wrote, in part:

> I always thought the code test kept HAM from becoming like CB (I"ve
> really been out of touch so if this is a sore issue, please give me some slack)

You really _have_ been out of touch! :-) Actually any sort of an exam
seems to work, and in practice the no-code Technician ticket has been very
effective at bringing in new hams who are willing to learn good amateur
radio practice. A large percentage, having been hooked, break down and
learn Morse code to get on HF. This is local experience, YMMV.

Ummm, just one point. The word "ham" is not an acronym, but a word. As a
noun it means an amateur radio _operator_, and as an adjective it means
"amateur". Thus "ham radio" is an accepted synonym for amateur radio.
Sorry to be pedantic, but I wince badly when I see "ham" capitalized and
used to indicate amateur _radio_.

> Obviously, I have no room to make any comments...all I want know is there a
> separate license for Technician with code?

Sort of. It's called the "Technician plus" license, and gives you the
privileges you already have on HF, plus all VHF/UHF privileges. Without
code, you only get the VHF/UHF privileges.

Welcome back, and good luck with the Tech ticket.

I'd like to hear of experiences any hams have with the X-10 home automation systems, and whether they operated correctly in the presence of RF (160 meters through microwaves will be used near them if I use the X-10 stuff at all), and whether the X10 stuff caused any interference to any ham bands.

The X-10 communications occurs using carrier current at 120kHz over the power lines.

Any and all information about experiences with these devices would be appreciated.

One thing you should always do, is wire the DC power lines from your mobile radio directly to the car's battery. However I like it when I turn on/off the car's ignition, that the mobile radio turns on/off also. The way I have accomplish this is to place a 12vdc relay in circuit. The relay coil goes to a low current ignition switched dc power circuit and the relay contacts go in series with the radio's DC power line connected to the car's battery. You can acquire a 12vdc relay with 15-20 amp contacts from any Radio Shack.

From: hartzman@kilroy.jpl.nasa.gov
Message-ID: <1994Aug3.171826.23679@llyene.jpl.nasa.gov>
Source record: 262377

Just got my ticket a couple of weeks ago. I've been scanning around and have picked up a repeater directory.

I noticed that what few 2m repeaters even mention an autopatch are marked as 'closed'. And almost nothing is documented as to anything be available under 440.

Are there more autopatches out there than are listed, and if so, what is the best way to find out about them? Talk to people on the repeater? Write to the trustee?

Also, are the 440's that are listed as 'private' and 'closed' really private and closed? If so, how do you join the club/group to obtain privileges?

TIA,

Les

Cecil, I don't believe that you are a liar, so I will characterize your
statements as 'mis-representations.'

Mis-representation 1: Your reference to a 'pre-publication leak.'
I get my copy of 73 just like a lot of other people: when it arrives
in my mailbox. Period.

Mis-representation 2: The statement which you have the unmitigated gall
to put in quotes above is not, in fact, anything like a quote. What I
said, in essence, is that the 73 review seems consistent with the
experience of a number of other reviewers and correspondents with
regard to their experiences in setting up the RF section.

Thus far, you have mis-represented what the reviewer has said, and you
have mis-represented what I have said about the review. You have used
your imagined 'pre-publication leak' as an excuse for your other
mis-representations.

As I said, Cecil, I don't believe you are a liar. However, you are
stretching the limits of credidibility.

>>JM True, and the big problem is that the manual does not give sufficient info

>be _very_ unprofessional. ;-)

Excuse me, but for whom does the reviewer work, the manufacturer or
the subscriber?

Why should manufacturers be offered the chance to quietly fix problems
found in reviews, in order to get a review which hides the very real
difficulties with INITIAL QUALITY?

One of the problems I've had with CQ and 73 in the past is that their
reviews have tended to by little more than promotional spots for their
big advertisers. I welcome honest reviews, because they serve the
consumer. The adverts serve the manufacturer.

>>>CM I think your review was subjective rather than objective

>There is nothing wrong with the kit as far as I can tell, just with the
>manual. An addendum mailed to previous purchasers and included in the
>manual solves the problem.

Fine. But the initial problem still needs to be called out! And there
is no a priori obligation to give a manufacturer the 'second chance' to
get it right prior to publication.

Mr. Moore seems determined to show that Ramsey has gotten a bad
rap. Frankly, I just don't see it. I see very real problems, starting
with the way in which the ads represent the merchandise. While changes
could be made which would make Mr. Moore's points about 'know what
you're doing' valid, I don't see any evidence of significant progress
in that regard.

Use 555 timerin astable mode.
Re: Electronics, Sept.19,74
The 555timer applications sourcebook w/experiments
by Howard M. Berlin 1978

Varactor or Varicaps are diodes whouse reactance or capacitance depends
on voltage/charge across their depletion layers.
In simple words instea of using variable capacitor in osc. or tuned
cirquit and rotate it mechanicly, you can use diode (Varactor) and by
changing voltage on it you will tune osc.

How about doing yourself a birthday present and buy:

for information about the Kenwood TS-520S HF radio!!!

I was overwhelmed by the responses!!

I have thus acquired a TS-520S by trade of some quipment with a friend.
This is my first HF rig, so now I must get to studying so I can upgrade!

The overal responses were as follows:

The TS-520S is a Good all-around basic rig

It is very durable, reliable, and easy to repair.

The average price should be somwhere between $300 and $400
depending on what accessories come with it.

Now that I have one, I am looking for anyone who would sell, or knows where
I can get any of the following accessories:

The digital display module
The external VFO
CW Filter
FM board (if exists)
External X-verters

I would appreciate you input on finding these!

Thanks again for all the replies!!!!!!

NOTE: The Effective Sunspot Number for 01 AUG 94 was 26.7.
The Full Kp Indices for 01 AUG 94 are: 3- 2o 2o 2- 2- 2- 2+ 2o
The 3-Hr Ap Indices for 01 AUG 94 are: 11 9 8 6 6 7 10 9
Greater than 2 MeV Electron Fluence for 02 AUG is: 5.1E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7762 (N06E70)
produced three subfaint flares. A filament lifted off the
northeast quadrant.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet levels.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet, changing to unsettled for day 2 and day 3.
High latitude stations may experience active periods on day 3.

Event probabilities 03 aug-05 aug

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 03 aug-05 aug

A. Middle Latitudes
Active 05/15/20
Minor Storm 05/10/10
Major-Severe Storm 01/01/05

B. High Latitudes
Active 15/20/30
Minor Storm 10/10/15
Major-Severe Storm 01/05/05

HF propagation conditions were near-normal over all
regions. Similar conditions are expected over the next 24
hours. There is a chance a recurrent coronal-hole related
disturbance may begin increasing high-latitude signal
degradation on 04 and 05 August. Otherwise, near-normal
propagation will continue.

-- -- -- -- -- -- -- -- --- ------
Uncorrellated: 0 0 0 0 0 0 0 0 000 (0.0)

Total Events: 000 optical and x-ray.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

From: sadams@eis.calstate.edu
Message-ID: <31orcl$di@eis.calstate.edu>
Source record: 262369

This is a true story, happened today.

My brother was going to return my two year old copy of "Now Your talking", so I could inturn give it to another friend of mine.

My wife was taking care of her brothers jewlery store while he was on vacation. So my brother takes the book to the store and leaves it for my wife to bring home.

My wife calls me just know and says that somebody stole the book!

Some guy comes into the store and is looking around. She had the book on a counter. She went into the back and when she returned the man and the book were gone. She went back to the video tape and replayed it to see what happend. The man took a piece of paper from the book, then just picked up the book and walked out, taking nothing else.

I never thought that book was that important. Do you really think the guy will read the book and become a ham??

>
>Dave
>
>

And I've had mine for over two years and love it. Intermod is a problem with all the dinky HT's, as is heating on high power. Little radios have little buttons. When I want to have a big solid radio with a pretty crunchproof front end I use the IC32AT with it's big buttons and all. But day to day I carry the DJ580. It depends on what you want, need, how big you and your fingers are, and where you live.

Dave is right, there is an intermod problem on all the little HT's, including the DJ580 - if you live in an urban area, or one with lots of RF, none of them might be a good choice for you. Alinco did do a mod partway through the production to reduce the intermod, someone probably has the details. I live in the boonies of upstate ny, not a problem here (yet!)

It's not a scanner, 3-4 channels per second max, but that's enough to find out what's going on when the fire whistle blows or a prowl car goes by with lights on. The software is easy to use, and pretty similar to the ICOM's if you have any experience with them. I don't have to carry the manual. :-) The audio is good, being able to monitor two bands at once is good, etc. It's compatible with ICOM accessories using the more standard keying scheme. I'd definatley buy another.

YMMV

1934. DX packet cluster access via internet?

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-03 19:38:08 UTC
From: eckman@eos1.larc.nasa.gov
Message-ID: <31orn0$st0@reznor.larc.nasa.gov>
Source record: 262372

Recently, a Spanish-language FAQ was posted with a lot of interesting information that I'd never seen before (in English!). There appeared to be mention of a DX packet cluster (W5/F6CNB?) that is available via telnet access. Does anyone have information on whether this or any other DX packet cluster is actually available via the internet.

>Larry, K3TLX

I built a little 2 level stand to hold my hf and two meter below the car radio in front of the shifter. Got power off the cigarette lighter for the 2 /440 rig, then went to the battery when I added the HF. Antennas are mag mount on the roof. No problems so far in an '85 with 2.2L standard. YMMV

OK, folks, here is the weekly posting for the CWISTS.....

This week I will continue with a very rudimentary attempt at stringing it
along somewhat like an informal net, so that we can maximize the number of
folks wanting to join in in some 'semblance of an ordered sort of manner.

73 TU SU DE NA4G BOB AR

Greetings CWISTS, Boatanchorites, Fellow Hams, et al:

I will be on again at 0400UTC for the continuing saga of the Sacred and
Most Honorable Friendly Society of Brass Pounding Fist Functioning CWISTS.

Last Friday Night, there were six fine stations that checked in.
The first lowly attempt at a strictly informal ``net'' type format
worked rather well, and all stations were able to get some time.
Some were QRO, some were QRP, some were modern gear and some were
boatanchormen. We batted things about for a good solid hour, and
all had a good time.

I did not hear anyone on 40 meters (someone scout out a good 40 meter
QRG in the novice band).

There has been a lot of interest on the rec.amateur.radio newsgroups
on sending CW and the general poor quality of many fists these days.
Let us do a little to promote, not only the art of receiving CW
radiotelegraphic communication, but also the art of ...sending... good
CW radiotelegraphic communication. It is perfectly fine to have an
individualized fist, and it is often easy to tell who is aboard on watch
at the key, just by the first few characters received, but it ...should...
be a point of pride and operating skill to be able to manually send
characters of sufficient integrity as to be readily received by all who
might be in a position to hear same.

So, let us all see who will be on watch this coming friday night
(saturday morn 0400UTC). Run your treasured boatanchor if you can, or
even that newfangled rice box supreme, or even that fine homebrew QRP rig.

Definition: A CWIST is a person with an active interest in the PRACTICE
and USE of continuous wave radiotelegraphy as directly is
appliccable to amateur radio. Such PRACTICE and USE may
take the form of learning about radiotelegraphy and its
history in amateur/commercial areas, its application to radio
telecommunication, the practicing of the art and craft of
radiotelegraphy, and the refining and developing of the
technology of radiotelegraphy.

The general information is:

```
++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
+ CWISTS Friday Night Fist Function +
++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
+ +
+ Standard time: Friday Nights at 0400UTC (Saturday morning) +
+ +
+ Standard freq: 80 meters --- 3702.5 khz for all hands. +
+ 40 meters --- 7102.5 khz alternate, for all hands +
+ (between the heterodynes) +
+ (someone scout out a better QRG) +
+ ___ +
+ Standard calling signal: CWIST IMI DE <yourcall> K (if there +
+ are no control stations calling for +
+ you to check in), or, +
+ CWIST DE <yourcall> K (if there is a +
+ control station inviting checkins) +
+ +
+ Note: A simple informal net style protocol will generally be +
+ used, unless no control station assumes control for the +
+ evening, in which case it is an open roundtable format +
+ discussion group. +
+ +
++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
```

Let us all work together to continue to advance and promote the friendly
use of CW on the amateur radio bands.

Let us continue to assist and help the newcomers and slowspeeds who are trying to get their CW going.

Let us to continue to promote the use of whatever gear you have up and available, be it the newest of sorts or the oldest boatanchor. Remember, CW generation has not changed since the days of arcs, Alexanderson alternators, and Pliotrons.

Let us continue to promote the sharing and fellowship of the history and traditions of amateur radio (this includes all you OTs out there that have all sorts of goodly tidbits of history to relate to the young squirts on the block, and it includes all you young squirts on the block who, even though a bit new at CW and radio are the future of the service or hobby or profession).

Let us continue to promote the ``elmering'' of all of our new folks by the old timers aboard, in any way that we can. We should not be out to convert the brethren to CW, but should be there to elmer them and assist them in learning/practicing their skills, if possible.

So, OTs aboard, young squirts in the wings, high-speed afficionados of the art, and slow-speed ragchewers, join in on the fun. If your equipment is old boatanchor, so what. If your signal is a bit weak or chirpy, so what. If your antenna is just a mere piece of wire up into the trees, so what. YOU can still join in and participate.
YOU are the folks who will make it what it can be, a goodly learning time and an enjoyable evening for all.

See You There OM/YL.....

73 TU SU SK DE NA4G
Bob

From: oo7@astro.as.utexas.edu
Message-ID: <31otjj$ljc@geraldo.cc.utexas.edu>
Source record: 262279

myers@bigboy.West.Sun.COM (Dana Myers) reports:

>I was chatting on 10m with my friend Kent back in 1979. A few miles
>apart, he was using a light bulb (his dummy load) as an antenna.
>We were both located in Pleasant Hill, about 30miles from San
>Francisco. A station from Kentucky broke in, and gave us both
>excellent signal reports.

So where was the light bulb installed relative to the radio?
If it's screwed right on the chassis I'm impressed, but if it's
connected by a few feet of wire, I'm less impressed. You can
take a 100ft wire that has an elephant attached to the other
end, and work Japan on 160m with it, but you haven't really
worked Japan with an elephant.

>circuts, etc. Any opinions (especially about the value of a higher
>liscence) appreciated.
>
My general suggestion in cases like yours is to take your Tech test,
and then, in the many weeks of dead time while you wait for your ticket,
study the code. HF offers a lot that you won't get on VHF+ (as well as
the other way around). Stopping with the Tech is kind of like going to
B&R and only getting to choose from 15 flavors. Unless you're *sure*
you only want VHF+, get the code out of the way now and keep your
options open.

|> any interference to any ham bands.
|>
--
I have been using the x-10 for a few years and am active on 40 through 10 meters, 2-meters, and UHF. I run up to a KW and have had no problems with the X-10s and RF. I do have some problems communicating with the modules that are on the other side of the distribution panel when my PC is on. The PC generates noise on the AC line that prevents some of my modules upstairs from activating. My X-10 computer interface is plugged in the same branch circuit as the PC. BTW, don't plug your X-10s into a multiple outlet strip that contains interference protection. It will attenuate the 120 KHz signal! Found that out the hard way. I might solve my PC interference problem by plugging the PC into an outlet strip that contains RFI protection so that noise is blocked from getting into the AC lines.

You can also get device that installs in the distribution panel that will bridge the signals between the two hot busses.

These modules are great when used with a computer interface. I get the most use out of mine at Christmas when the wife puts out all of the lighted gizmos and wants me to turn them all off before retiring for the evening.

Home Automation Labs sells more X-10 stuff than anyone else I have come across. I don't have their address with me at the moment or I would post it.

1941. Re: 15mW QSO's

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-03 20:35:45 UTC
From: mjsilva@ted.win.net
Message-ID: <458@ted.win.net>
Source record: 262301

According to "200 Meters and Down" (ARRL pub.), in 1923 a QSO was completed between Australia and New Zealand (~1500 miles) using 4mW. The book also states that the 4mW signal was heard an additional 1400 miles away. 2900 miles on 4mW *input*! No mention of the frequency -- anyone care to speculate?

>used.
>
>Does anybody have any info?

Goodness, yes. The 147.435 repeater on Saddle Peak meets all of
your requirements. In fact, it is so heavily used it is often useless.
Nonetheless, the input is 146.400 and the PL is 103.5 Hz.

I normally use "the Duck", 147.24MHz (+600k), usually no PL.

>Mis-representation 1: Your reference to a 'pre-publication leak.'
>I get my copy of 73 just like a lot of other people: when it arrives
>in my mailbox. Period.

Hi again, Greg. Are you paranoid or what? I don't think you wrote the posting to which I was referring. I certainly didn't say you wrote it. I was talking about a posting so long ago that it had to be a pre-publication leak. You probably missed it and made a rash assumption. I was not quoting you... go find another windmill. :-)

I inferred from Joe's posting about his review, that about half the responders to the review thought that he had been too hard on Ramsey. I am one of those many.

>Why should manufacturers be offered the chance to quietly fix problems
>found in reviews...

The purpose of a kit review should be to help the kit-builder create something of value of which he can be proud and satisfied, not to rob him of the joy of kit-building.

>But the initial problem still needs to be called out! And there
>is no a priori obligation to give a manufacturer the 'second chance' to
>get it right prior to publication.

(1) Find the problems. (2) Publish the problems. (3) Fix the problems. No company is perfect. Heathkit got a lot of "second chances". I am not advocating a coverup but we don't need a 'Ham National Enquirer'.

Speaking of problems with the 580 I have one to report. It seems that
switching between my rubberduck and my J-pole too often has loosened the
BNC(? connecters aren't my specialty). Has anyone else had this problem?
Is there any way to fix it besides paying big bucks to send it back?

I have a limited budget because I am still a teenager.

Thanks,

Brandon DuRette KB7USE

1948. mods for Yaesu ft-211hr???

Al from the UK (sorry, I did not capture the full address) asks:

>Sorry for being a dumbo - my interest has being raised! What is WWV?
>Is this a North American only broadcast or can it be received
>in Europe? The reason I ask is that I have tuned a short wave radio
>in to the bands given and dont hear anything. I am ready to be
>laughed off this group !!

Al, WWV is the station (actually two stations) that broadcast time and frequency standards here in the U.S.. They also broadcast storm warnings to the Pacific and a few other things. Most of the audio consists of time clicks, with voice at the end and beginning of each minute. Anyone laughing you off the group should be ashamed at themselves for not noting your U.K. location.

I had a LOT of RFI from my [originally] XT. After the powersupply went, it was replaced, and now the problem is virtually non-existant! That's now the first thing I check for.

I have noticed that now, my problems only occur in the upper HF bands (& of course VHF). I would say everything below 15m is virtually unaffected by my PC beside it. However, there might be the odd "birdie" unaccounted for!

SYNOPSIS OF ACTIVITY

Solar activity was at very low levels.

Solar activity forecast: solar activity is expected to be
at very low levels.

The geomagnetic field has been at mostly quiet levels
for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be at quiet levels.

Event probabilities 04 aug-06 aug

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 04 aug-06 aug

A. Middle Latitudes
Active 05/05/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 10/10/15
Minor Storm 05/05/10
Major-Severe Storm 01/01/01

HF propagation conditions were normal over all regions. It looks like no changes will be observed over the next 3 days, through 06 August inclusive. Near-normal propagation conditions should persist.

Total Events: 005 optical and x-ray.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY
---------------------------------------------------------------

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

LD>Howdy,
LD>I've had a Novice license since the mid 80's and have recently started to
LD>think about getting a Technician Class License.

LD>I notice that there is now a NO-CODE Tech. License....is there an advantage
LD>to me having passed the 5 wpm test?

LD>I always thought the code test kept HAM from becoming like CB (I"ve
LD>really been out of touch so if this is a sore issue, please give me some
LD>slack)

LD>Obviously, I have no room to make any comments...all I want know is there a
LD>separate license for Technician with code?

It is called Tech Plus. It gives you all the technician priviliges,
which as you may already know is everything above 30 MHz. Having passed
the code test you will also still have access to the novice HF bands
that you are already using. All you need to do to upgrade is pass the
Technician written test.

John

Greetings:

I was talking to a guy that did not want to become a HAM because
he fears that he can not talk to his brother in Dallas while he lives
in Houston. He told me that it is to close for a skip and to close for
line of sight and no repeaters around. Because I'm not from Texas,
I have no clue what I can recommend to that poor guy.

Is there some kind Texan soul that can give me some ideas on how this
can be done?

BTW, I'll be around the Austin area by the end of this year, how's the 2meter
activity around town??

--
Luis Roberto Anaya papo@donuts0.bellcore.com
A True PL/1 Hacker papo@briscas.gamekeeper.bellcore.com
Bellcore, NJ Ham: N2ZXE

This guy sounds like he has spent too much time on CB. Houston-Dallas can be
done regularly, without problem on any of the following bands:160, 80, or 40
during the bdaytime.

Austin has some 2 meter activity.

I've still got the 30-odd-year-old lightbulb (still works) that I used for
tuning up the old cw transmitter (Heathkit DX-40 :-)). It's got a piece
of wire about an inch long, folded so it fills the center hole of an SO-239
socket, soldered to the center contact, and another piece a couple of
inches long, soldered to the threads, that slipped under one of the
mounting screws of the socket. That's pretty short, even for loading an
elephant. Of course, I never worked anybody on it.

I've been using X-10 clones (a mix from just about everywhere) for quite a while longer than I've been generating extra RF. I've not noticed any difference in the behavior of the X-10 devices after the RF sources were acquired. (They didn't work perfectly before and they still don't, but I like 'em anyway :-)

Since we're close, Dan, I'd be happy to loan you some to test in your shack.

SYNOPSIS OF ACTIVITY

The only notable event was a disappearing filament which erupted
sometime between 16:55 UTC and 18:20 UTC in the southwest quadrant.

Solar activity is expected to continue very low.

The geomagnetic field was generally quiet to unsettled. A few
brief active periods were observed over some high latitude stations.

The geomagnetic field is expected to continue mostly quiet to
mildly unsettled.

HF propagation conditions were near-normal over all regions.
Near-normal propagation is expected to persist over the next 72 hours.

Date	Begin	Max	End	Xray	Op	Region	Locn	Sweeps/Optical Observations
22 Jul:	1445	1450	1454	B2.2	SF	7758	S11E17	III,V

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max, and end times are defined as: B = Before, U = Uncertain, A = After. All times associated with x-ray flares (ex. flares which produce associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

You mean, it doesn't cover the entire 438-450 MHz band as advertised? Or you
want it to transmit out-of-band, illegally (CAP doesn't work on UHF yet,
don't know about MARS)?

Luis...

About the only way to get between Houston and Dallas voice wise is 80 meters or 40 meters. There are lots of ways via Packet radio to do so. There are also a couple of closed repeater networks in the area but a new ham probably doesn't stand a chance of getting permission to use one of them.

There are loads of repeaters in the Austin area. I travel through there all the time. Let me know if you want some frequencies and I'll dig them out of my mobile rig.

Great! Welcome to the fun and enjoyment of ham radio!
Although it's not for everyone, how will you ever know
until you try.

A lot of folks have begun with the no-code license and
have moved on to higher classes. Approximately 15% of
the folks introduced thru our classes have earned their
Advanced or Extra licenses within the following year
or two.

If you interest never wanes from the VHF/UHF spectrum,
the no-code license is all you'll ever need. If, though,
you become interested in the world below 30MHz, current
law stipulates that demonstrated code poficiency is a must.

> I have successfully DXed with my CB & a homebrew antenna on the standard 4
> watts, but don't care for the CB crowd much.

I wouldn't know what to say here.

> I have listened to the 2 meter band on my scanner, but can't quite get a
> good feel for what it's all about.

Listen to a lot of repeaters. Be careful making judgements.
Many folks clown and cut up with their friends and, sometimes,
their antics can be misinterpreted if you don't know all the
details.

Most all the folks are friendly and "nice people". Ham
radio, however, is not immune to some of society's jerks
and you must concentrate on the "good" and move away from
the "bad". Avoid the tendency to judge "all" by the
undesirable traits of a very few.

> I have been fooling around with circuts and electronics for
> about eight years now, and really find an interest in making antennas,
> circuts, etc.

Neat! Ham radio is a fertile ground and an excellent
environment for technical development and learning. There
are those who bemoan the "appliance operator" and believe
that's ham radio today ..... remember what I said about
judging all by a few.

> Any opinions (especially about the value of a higher liscence) appreciated.

I have a feeling you'd want it. At least, it's worth
a try.

> PS I am having a hard time finding out where to take my technician no
> code examination in the Minneapolis area. Anyone know who to contact?

Contact the ARRL-VEC. They have listings of upcoming
exam opportunities. Also, look thru this newsgroup ...
exam opportunities are frequently posted herein.

If you'd like to travel to the Middletown, OH area, we
are having one on Wednesday evening, September 7.

:-) :-) :-)

Seriously, the ARRL is available via the Internet. Sorry,
I don't have their address.

> in Europe?

With favourable conditions you should be able to hear WWV quite well in Europe, mainly on 10 and/or 15 MHz. Every 18 minutes past the hour (on WWV that is) you will hear their solar forecast, telling you what to expect in ways of reception conditions. Shouldn't you hear WWV at all you may conclude that radio conditions is pretty bad :-)

: Is there any way to fix it besides paying big bucks to send it back?
:

Yes, I did it myself. You need some small screwdrivers, a fairly small soldering iron (25w pencil tip type), a bit of patience, and no coffee for about 3 days prior to trying it. The problem is that the center conductor of the BNC is soldered to a post on one of the PC boards. Any movement will crack the solder. There is also a wire that is soldered to the *threads* of of the connector, and it is tack-soldered to the same PC board. Both connections were broken on mine by the time I got to fixing it. And, of course, since the threads are all gooped up with solder, you can't tighten the nut holding the connector in place, so after re-soldering the mess, be sure to apply some epoxy to keep the connector from moving.

The whole procedure took an hour or two. The connector is located under about 2 or 3 layers of other PC boards, so the general procedure is to open the radio up (it opens like a book if you do it right), and unscrew each layer of PC board until you get to the bottom. DON'T FORCE ANYTHING. If something isn't moving, look around for a nut or screw you missed, for example, the ring-like nuts that hold the volume/squelch pots in place.

I wrote the whole procedure up after I did it, and posted it here, but of course I didn't save a copy :-(. Did anyone else save it?

Good luck,

Greg KD6KGW

1984. Ham Software Pirates?

> any worse than the rest of the population?

As I was told on a job interview once, "Oh, a ham ticket eh? Do you look at it as a license to steal?"

Apparently a lot (not all, but enough to be noticable) of hams seem to think that anything that will fit in their pockets (or pickups) is a perq of the job they are employed at. We've all (mostly I would assume) been guilty of this to some extent. Whether grabbing a few resistors to finish a project or stealing "company time" to read QST. The real abusers are the ones that order 100 of every resistor value to stock up their "lab" at home. Most companies (aerospace) that I've worked for figured a certain amount of slack time and expendable inventory in keeping the troops amused and productive.

The same holds true for software. Some people (hams included) seem to feel that anything that will fit on a disk is a perq as well. I've actually seen people copy hardware specific test routines "just because".

Where do you draw the line between a "little theft" and a "big one"? Is making a copy of AutoCAD and taking it home to do personal work and get better at it for your tasks at work wrong? According to AutoDesk it is. Making a copy of AutoCAD and then selling your services to the others is not even debatable. However, people that do things like this will talk (or in this case post) until they are blue in the face to "justify" their actions.

I would think that we are all thieves to some extent. (Well except for Jeff Herman, who is perfect, just ask him.) It's just a matter of what we will justify as acceptable behaviour.

: BTW, I'll be around the Austin area by the end of this year, how's the 2meter
: activity around town??

Assuming 2 meters, it is virtually imposible to talk direct between Houston and
Dallas. If however, you use packet, there is almost always a link between
them. Now if you can operate on HF, then 40 meters is good in the daytime to
early evening, and 80 meters will work at night.

Houston to Dallas is an easy hoop for 2 meter SSB. In fact 222, 432, and 1296 SSB is also easy. The problem is not he cant talk to his brother, its is just to lazy to study for a test. At one time the complaint was "i have to learn code" now it is I have to take a test. Every body wants everything for nothing.

1989. GB2RS News 7th August 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-04 19:11:43 UTC
From: dave@llondel.demon.co.uk
Message-ID: <776052703snx@llondel.demon.co.uk>
Source record: 262207
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 7th of August and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First the headlines:-

A radio amateur has helped with a Mayday message,

The Woburn rally takes place today, and

It seems that it really was possible to hear the Jupiter crash on HF.

Hastings amateur, Ron Oswald, G7PIP, helped a yacht in distress to contact the coastguard. On the 17th of July, he heard a Mayday transmission from the yacht 'Aida' which had lost its rudder. Dover coastguard was unable to hear the stricken craft so Ron proved to be their only lifeline. He was eventually joined by a local coastguard and a helicopter was launched.

Ron, who is a Raynet member, said it really made his day. The 'Aida' was observed by the helicopter until it arrived safely at Newhaven.

The RSGB National Mobile Rally takes place today, Sunday the 7th at Woburn Park, near the famous Abbey in Bedfordshire. Access is easy from the M1 motorway: if travelling from the north or south, leave the motorway at Junction 13, not 12, and follow the signs through Husborne Crawley to Woburn Abbey. Avoid routes signposted to "The Wild Animal Kingdom" or "Game reserve" and look out for RSGB signs.

The rally features a large trade exhibition, an RSGB Bookstall and enquiries stand and a members mart area, all under cover. All the normal Woburn attractions will be available at a small extra charge. The event opens at 10.00am and refreshments are available nearby. The July edition of Radio Communication gives full details and a map of the surrounding area.

The August edition of RadCom carried the full text of the recent licence changes. It includes a revised list of countries which are members of CEPT. It is extremely important to distinguish between this comprehensive CEPT list, and those countries which have signed the CEPT TR61-01 agreement. TR61-01 permits temporary operation in other countries without additional paperwork and the signatories are listed in abbreviated form on the annual Licence Validation Document. The full list of CEPT countries should be used only to translate these abbreviations.

As a service to the amateur radio community, the RSGB is making the August edition of Radio Communication available free to non-members. Simply call RSGB Headquarters on 0707 659015 for your copy.

According to BBC television's The Sky at Night, amateur observations of the radio noise from Jupiter have shown a correlation between noise at 20.4MHz and the impact of fragments of comet Shoemaker-Levy-9. Dave Sumner, G3PVH, presented a paper on his own observations of Jupiter noise at the AMSAT-UK Colloquium last week. There is much additional data from amateurs which has yet to be fully analyzed.

An RSGB award for working 15 locator squares on the 10GHz band was issued in July to Jack Brooker, G3JMB. This was only the second such award to be issued. The contacts were made whilst operating portable from Chanctonbury Hill, in West Sussex, locator IO90TV.

Full details of all RSGB VHF, UHF and Microwave awards can be found in the RSGB Call Book.

The RSGB is looking for someone to carry out the important volunteer task of Trophies Manager. Applications and enquiries should go to the Company Secretary, John Hall, G3KVA, whose address is correct in the RSGB Call Book or can be found on the QSL page in every RadCom.

Now a couple of items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Greenland, DL1VU will sign /OX from next Thursday, the 11th, for a fortnight.

And from Vanuatu and Fiji, IK0OZD is expected to be operational for the next two weeks, though the callsigns are not yet known. Preferred frequencies are: 7065, 14265, 18135 and 21265 kHz.

The Orkneys two-metre repeater, GB3OC, was scheduled to be closed down this week for a complete overhaul. It is likely to be off for two months. Further information can be obtained from the repeater keeper Bill Wright, GM3IBU.

The only rally we know of for today, Sunday the 7th of August is the RSGB Woburn Rally which was covered earlier in this broadcast.

Next the two events we know of for next Sunday the 14th of August:

The Derby and District Amateur Radio Society Radio Rally is to be held at Littleover Community School, Littleover, Derby. This is on the A5250, just north of its junction with the A38. The event has the usual attractions including a monster junk sale. Details from Martin, G3SEJ on 0332 556875.

The Flight Refuelling Amateur Radio Society Hamfest is to be held at the Flight Refuelling Sports Ground, Merley, Wimborne, Dorset. Doors open at 10am and the event features trade stands, a bring and buy stall and a car boot sale. Also on display will be the G4RFR 10GHz EME station. Talk-in will be on 2m, channel S22, and overnight camping facilities are

available for the Saturday night. Details from Richard, G4VCQ on 0202 691021.

Now a date for your diary:

The next RSGB Regional Meeting takes place at Bristol on Saturday the 22nd of October. These meetings are for members and non-members of the Society to meet Council Members, Society Officers and staff to discuss the workings of the Society and amateur radio related matters. For further details, contact RSGB Zonal Council Member Julian Gannaway, G3YGF whose address is correct in the RSGB Call Book.

Now for the HF contest news:

The Romania DX Contest is scheduled to finish today, Sunday the 7th at 1600. It is an HF event involving both CW and SSB.

The European DX CW Contest takes place from 0000 on Saturday the 13th, until 2400 on Sunday the 14th of August on the 3.5 to 28MHz, but not WARC bands, obeying IARU Region 1 band plans. There are some restrictions so participants are advised to consult the rules which can be found on page 18 of the August RadCom.

Next some VHF contest news:

The RSGB 24GHz Summer Cumulative Contest takes place from 0900 to 2100 UTC next Sunday the 14th of August. See April's RadCom page 82 for further details.

Special event stations active this month include:

GB4GS, which will be aired from the Goodwin Sands, WAB square TR45, next Friday the 12th of August, by members of the Radio Club of Thanet. Operation will be on 80 and 40 metres. Times will depend on the tide.

GB4ASH will be at the Ashfield Show, Sutton-in-Ashfield next weekend, the 13th and 14th. The Mansfield Amateur Radio Society will be on HF and VHF bands, CW and SSB, plus packet on 2 metres. Visitors will be most welcome. The operators will be raising funds for the charity 'Kickin 4 Kidz', details of which are on page 5 of the August RadCom.

G2TV, which was issued to the Baird Company in 1926 for television transmissions, will be activated over next weekend, the 13th and 14th, by members of the Baird Amateur Radio Society. This commemorates the 50th anniversary of the first multi-gun colour television tube.

Also on the 13th and 14th, GB2YFT will be at the Yeovil Festival of Transport at Barwick Park Show Ground.

And now the solar factual data

We are currently not receiving the usual telexes of NOAA/USAF data which is restricting the reports which the RSGB Propagation Studies Committee is able to publish. We apologise for any inconvenience caused whilst this problem is sorted out.

A bad sign for HF propagation research was a poll taken at the recent Space Environment Laboratory Users' conference at Boulder at which 49 of the 50 who attended were only interested in satellite data services.

Solar activity has remained very low though there have been periods of Sporadic E on 10 and 6 metres lasting for many hours. No flares have been reported. The daily sunspot indices have remained very low with the mean for the period being 11. Solar flux levels have averaged 75 units but hardly changed day to day. The 90 day flux average for the 22nd of July was 80 units, this was the last day on which this data was received. The geomagnetic Ap indices have been around 'just unsettled' most days, but the 28th was up to 22 units, with the period averaging 13.7 units.

The daily aa indices, as supplied by the British Geological Survey for the 19th to the 25th July, were mainly quiet with the weekly average being only 15.4 nanoTeslas, about K2. Many periods were down to only 5 nanoTeslas. We have no X-Ray flux or electron fluence data. The July average spot count was RI 35, with a maximum of 72 on the 11th and a minimum of 7 on the 29th. The smoothed count for January 1994 is 36.8 +/- 5. Bartells rotation 2199 started on 3rd August.

I'll repeat the figures. Spots - 11; Flux - 75; Ap index - 13.7; July RI 35.

Now the ionospheric data for Central France

The F2 day-time critical frequencies at Poitiers, as reported by Meudon, averaged 6.0MHz with little variation from day to day. The darkness hour lows averaged 3.0MHz, though they varied from 2.9 up to 3.6MHz. Blanketing E was present most days lasting up to 8 hours on the 31st. The highs are now around 2000 hours and the darkness hour lows 0400 hours.

I'll repeat the figures. Highs - 6.0MHz; lows - 3.0MHz.

Now the ionospheric data for the north:

The F2 day-time critical frequencies at Ekaterinberg averaged 5.4MHz. The darkness hour lows averaged 3.4MHz.

I'll repeat the figures: Highs - 5.4MHz; lows - 3.4MHz.

And lastly the solar forecast:

This week, the active side of the sun will be rotating away, solar flux levels are expected to be about the 80s. Geomagnetic levels are expected to be quiet up to the 12th, then becoming very unsettled. Ionospheric MUFs in the south are expected to reach 19MHz during daylight, and the darkness hour lows are expected to be at about 10MHz. Levels in the north will be down on these. The coronal holes which have caused a lot of magnetic activity are now tending to die out.

And that is the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Victor Charlie and G7 Tango Bravo series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Foxtrot series.

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast in the 80m, 40m, 6m and 2m bands.

1990. RFD rec.antiques.radio+phono

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-04 19:16:42 UTC
From: robie@umbc.edu
Message-ID: <31reqq$5on@rodan.UU.NET>
Source record: 262181
Cross-posted to: news.announce.newgroups,news.groups,rec.antiques,rec.audio.tech,rec.radio.amateur.misc

RFD REC.ANTIQUES.RADIO+PHONO

Name: rec.antiques.radio+phono (unmoderated)

Charter: Discussion of the use, repair, and collecting of early
standard-broadcast radios; phonographs; and any other
similarly-related items designed for home entertainment
sound receiving or sound reproduction.

Proposed Discussion Period: The 21 days following official acceptance of
this proposal by the moderator of news.announce.newgroups

Scope: This group is intended to be a forum for those with an
interest in sound-receiving and sound-reproduction
equipment that was generally manufactured prior to
the widespread use of transistors. The group's discussion,
however, will not be strictly limited to vacuum-tube and
mechanical devices, and those with an interest in early
transistor radios, early televisions, and other such items
that reflect pioneering audio technology will be welcomed.

Exclusions:
Amateur radio equipment discussion will be directed to the
existing amateur radio newsgroups and to the boatanchors
list. This is only done because those groups present an
established forum for people with an interest in classic
amateur radio equipment. Those classic amateur radio
collectors who also share an interest in early standard-
broadcast equipment will fully appreciate the desire to
separate the two interests. Their valuable expertise
will, however, be most welcome in all forums.

Rationale:
Hierarchy - This group is proposed as a sub-group of rec.antiques
because much of the equipment in question shares the common
feature of being designed as home furnishing and/or decoration.
For this reason, there is a close affiliation between those
with an interest in early home-use sound reproduction equipment
and others with interests in antique furniture restoration,
appreciation for decorative style of various historic eras,
and the historic importance of original sound recordings and
broadcasts. Furthermore, the discussion of "classic" *amateur*
radio often involves terminology and subject matter that is
outside the vocabulary and interest of many antique radio and
phono collectors.

While there is certainly some obvious technical common ground,
there is clearly good cause for two separate groups to exist
and for them to be separated under different hierarchies.

Newsgroup Name - The choice of rec.antiques.radio+phono was made to reflect
the interests of the group of enthusiasts (mostly contributers to
rec.antiques) who began discussing the formation of a new newsgroup
more than a year ago. It was the intention of those first
interested parties to form a group that distinctly focused on,
and clearly identified, an interest in the closely-related
development of home-use phonographs (including cylinder players,
music boxes, related materials, etc.) and standard-broadcast
radios (and related equipment). Any person who feels compelled
to propose an alternative name is asked to first consider that the
intention of this proposal is to create a group with very specific
interests, and not one that is so broad as to include all early
technology, electronic equipment, etc.

1991. '94 ARRL Digital Conf Update

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-04 19:49:45 UTC

Source record: 262160

ARRL 13th ANNUAL DIGITAL COMMUNICATIONS CONFERENCE AUGUST 19-21

Do you operate a Digital mode (maybe Pactor, Packet, GTOR or AMTOR) now? Is it hard to keep up with the latest Digital technology? Would you like to know more about Digital modes? If "yes" to any of these questions, then attend the 13th Annual ARRL Digital Communications Conference.

The Conference will be held on August 19 - 21, 1994 at the Thunderbird Convention Center, 2201 East 78th Street in Bloomington, Minnesota. Accomodations are available at the Thunderbird Hotel, at hotels and motels located nearby, and also at several area RV\camper campgrounds.

Enjoy a weekend of fun learning about the latest developments in TCP/IP, PACTOR, AMTOR, PACTOR-II, CLOVER, G-TOR, PACKET, DSP, and imaging. Participate in nine forums about DSP, new HF modes, TCP/IP, VHF/UHF networking, BBS SYSOP issues and more. A glance at the program (attached) will show many forums that will catch your interest!

A highlight of the conference will be the presentation of technical papers on many aspects of digital communications throughout the day, Saturday. A list of papers is attached. You will receive a copy of all papers presented.

Many demonstrations of the latest in hardware and software will be presented. The conference kicks off Friday evening with an educational forum "The Basics of Amateur Digital Communications - A Crash Course for Beginners" with instructor John Kaplan, WR0W. The Saturday evening Technical Showcase will feature TAPR Special Interest Group meetings for BBS SYSOPs and on VHF/UHF network building and a technical presentation on "Low Cost HF DSP Modems" by Johan Forrer, KC7WW.

The Hospitality Room will provide the place to meet old friends and make new ones. At Saturday's luncheon you will get to know "who's who" in digital communications. Meet the Engineering staff of manufacturers like Kantronics and Timewave Technologies. The optional Saturday evening diner will provide another opportunity to make new friends.

If you want a break from the Conference, the Mall of America, with hundreds of unique stores, is located within walking distance. The family will enjoy Knott's Camp Snoopy theme park inside the Mall. The renowned Minnesota Zoo is only a short drive away.

The Conference registration fee is $45 per person, which includes admission to all Conference activities, a luncheon buffet and a copy of the technical papers. An optional Saturday evening buffet is $20 per person additional. Registration deadline is August 12th.

For more information about the Conference or special Airline and Motel discounts call or write:

The host of the 1994 ARRL Digital Communications Conference is the TwinsLAN Amateur Radio Club.

See YOU at the Digital Communications Conference August 19-21!

13th ANNUAL ARRL DIGITAL COMMUNICATIONS CONFERENCE
PRELIMINARY PROGRAM

Friday, August 19

TIME ROOM EVENT
Noon - 6 PM TBD ARRL "Future Modes"
Committee meeting.
Noon - 6 PM TBD ARRL "219-MHz" Committee
meeting.
4 - 10 PM Winnebago Conference check-in.
6 PM - 11 PM Winnebago Hospitality & Demo area are open.
7 PM - 9:30 PM Yakima The Basics of Amateur Digital Communications - A
Crash Course for Beginners. Instructor: John
Kaplan, WR0W.
Saturday, August 20
TIME ROOM EVENT
6:30 - Noon Winnebago Hospitality & Demo area open
7:00 - Noon Winnebago Conference Check-in.
8:00 - 8:15 AM Miami Conference "Welcome"
8:30 - 10:00 AM Miami Technical Paper Presentation
8:30 - 10:00 AM Arapaho Forum - Developments in DSP
For the Amateur. Moderator -
Bob Strickiin, N5BRG
8:30 - 10:00 AM Choctaw Forum - TCP/IP - What's next?
Moderator - Lew Shannon, K0RR
10:00 - 10:15 AM All Break
10:15 - 11:45 AM Miami Technical Paper Presentation
10:15 - 11:45 AM Arapaho Forum - ARRL Committee
Updates: "Future Modes":
Moderator - Paul Rinaldo W4RI
and "219-MHz Networking":
Moderator - Tod Olson K0TO"
10:15 - 11:45 AM Choctaw Forum - Digital Data (Voice
and Image) Transmission
Method Developments.
11:45 - Noon AM All Break

Noon - 1:00 PM Miami Buffet Luncheon (Included)
1:00 - 5:30 PM Winnebago Hospitality & Demo area open
1:15 - 2:45 PM Miami Technical Paper Presentation
1:15 - 2:45 PM Arapaho Forum - High-Speed (above
1200 baud) data transfer
methods and networking
techniques.
1:15 - 2:45 PM Choctaw Forum - HF Data Transmission
Methods - An Over-view of
Current Modes and What's
Coming Next. Moderator -
Frank Perkins, WB5IPM
2:45 - 3:00 PM All Break
3:00 - 4:30 PM All Continuation of all sessions
5:30 - 6:30 PM Miami Buffet Diner (Optional)
7:00 - 11:00 PM Winnebago Hospitality & Demo area open
7:00 - 10:00 PM Miami Tucson Amateur Packet Radio
(TAPR) Presents Packet BBS
SYSOP Special Interest Group
7:00 - 10:00 PM Arapaho Tucson Amateur Packet Radio
(TAPR) Presents VHF/UHF Network
Building Special Interest Group
7:00 - 10:00 PM Choctaw American Digital Radio
Society (ADRS)presents a
technical presentation:
"A Low Cost DSP Modem for HF Digital
Experimentation" by
Johan Forrer, KC7WW

Sunday, August 21

TIME ROOM EVENT
8:30 - Noon Winnebago Hospitality & Demo area open
10:00 - 11:00 Winnebago Conference wrap-up and close.

13th ARRL Digital Communications Conference Proceedings

1. A Proposal for a Standard Digital Radio Interface
Written by Jeffrey Austen, K9JA

2. Automatic Packet Reporting System (APRS)
Written by Bob Bruninga, WB4APR; Presented by Gwyn Reedy, W1BEL

3. Broadcast, UI and un-connected protocols-the future of Amateur Packet
Radio?
Written and Presented by Paul Evans, W4/G4BKI

4. Packet, GPS, APRS and the Future
Written and Presented by Paul Evans, W4/G4BKI

5. Computer Networks in Africa: From Utopian Discourse to Working Reality
Written by Iain Cook

6. A Low Cost DSP Modem for HF Digital Experimentation
Written and Presented by Johan Forrer, KC7WW

7. G-TOR: The Protocol
Written by Mike Huslig, Phil Anderson, Karl Medcalf and Glenn Prescott
Presented by Karl Medcalf and Mike Huslig.

8. GMON-a G-TOR Monitoring Program for PC Compatibles
Written by Richard Huslig and Phil Anderson, W0XI; Presented by Phil
Anderson.

9. A Theoretical Evaluation of the G-TOR Hybrid ARQ Protocol
Written by Glenn E. Prescott, WB0SKX, And Phil Anderson, W0XI;
Presented by Glenn Prescott

10. On Fractal Compression of Images for Narrowband Channels and Storage
Written by Witt Kinsner, VE4WK

11. Fast CELP Algorithm and Implementation for Speech Compression
Written by Armein Langi, VE4ARM

12. Wavelet Compression for Image Transmission Through Bandlimited Channels
Written by A. Langi, VE4ARM, and W. Kinsner, VE4WK

13. ROSE X.25 Packet Switch Status Update
Written by Thomas A. Moulton, W2VY

14. A Primer on Reliability as Applied to Amateur Radio Packet Networks
Written by T.C. McDermott, N5EG

15. FSK Modem with Scalable Baud Rate
Written by Wolf-Henning Rech, N1EOW, and Gunter Jost, KD7WJ;
Presented by Wolf-Henning Rech, N1EOW.

16. MacAPRS: Mac Automatic Packet Reporting System-A Macintosh Version of APRS
Written by Keith Sproul, WU2Z, and Mark Sproul, KB2ICI; Presented by
Keith Sproul, WU2Z.

17. Formation of the TAPR Bulletin Board System Special Interest Group
Written by David A. Wolf, WO5H; Presented by David A. Wolf, WO5H

18. How Amateur Radio Operators Can Emulate an HF ALE Radio
Written by David R. Wortendyke, N0WGC; Presented by David R.
Wortendyke, N0WGC.

19. A Preview of HF Packet Radio Modem Protocol Performance
Written by Teresa Young, Stephen Rieman, David Wortendyke, N0WGC
presented by David Wortendyke, N0WGC

20. Designing Rural Telecom Systems for Developing Countries.
Written by Joseph Lischka, KA0NUZ; Presented by Joseph Lishhka, KA0NUZ
NOTE: This is a hand-out and not in the ARRL Book.

1993. Re: Car warrantee and 2m radio

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-04 20:49:28 UTC
From: kevin jessup <kevin.jessup@mixcom.mixcom.com>
Message-ID: <1994Aug4.204928.6155@mixcom.mixcom.com>
Source record: 262203

In <31m6iv$f94@news.bu.edu> david@bu.edu (David Gagnon) writes:

>I am in the process of looking for a new car and someone brought up the
>possibility that installing a 2m rig might void a new car warrantee. His
>thought was that the radio might do damage to the cars computer and that
>having the radio might invalidate a provision of the warrantee.

This was a big worry for me till I decided to just DO it (and do it
right). Everything worked out fine.

I have two Jap cars: a 1991 Toyota Tercel and a 1992 Honda Civic LX.
Both have 50 Watt mobile rigs.

Run 14 guage wire directly from the radio to the battery (fused of
course) and put the antenna on the trunk or on the roof. Keep
the coax away from the engine computer. You'll be fine.

Some people like to connect their high-power rigs to the cigarette
lighter. Bad idea. Do NOT use any of the existing electrical
system.

>learning the code.

It's NOT worth it if nothing on HF appeals to you. Then again, you
have to actually TRY some things before you know if you'll like
them or not.

It's quite a diverse hobby and has something for everyone. Both technical
and non-technical aspects of the hobby can keep you very busy. If
you become a member of a club and are an active member or official,
you may find time for little else!

Right now, I have no interest in operating on HF. I did take the
5 WPM and found it pretty easy. I went from 0 WPM to solid copy
on the 5 WPM test in only 3 weeks. On average, I did three
20-minute study sessions per day using the Radio Shack Gordon
West tapes and the Super Morse program for the IBM PC. Your
mileage may vary.

As someone probaly said already, you'll be waiting for the
ticket anyway. One option is to use that time studying
Morse code.

Good luck, and welcome!

I just sent three pieces of lightning - damaged equipment for Kenwood's East Coast
service center (Virginia Beach, Va.) to check out. In the past, the repair lead time
was 2 to 3 days....this time, they are running 10 to 15 days! ARRRGGHHH!

Has anyone recently sent any equipment to Icom or Yaesu? I have had so
much trouble with my TS690, I am about to become a former Kenwood owner.

I can pick up WWV Hawaii on 10MHz quite clearly here in NZ.

To all radio amateurs

SB DX ARL ARLD046
ARLD046 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE, QRZ DX, and the Contest Corral column from the pages of QST. Thanks.

YEMEN. Bob, N4GCK, hopes to operate from a European embassy in Aden sometime this month. Plans have been shifted due in large part to the continuing civil war in the country.

CAMBODIA. Sanji, XU7VK, is active, however he will return to Hungary sometime early this month. He has been heard on 80 meters between 3500 and 3510 kHz. Also check 14220 kHz from 1000 to 1200z. Word has it that VS6WV will be in XU-land in late August, but his operating time will be limited.

RWANDA. Paul, F6EXV, aka 9X5DX, will soon return to Rwanda to continue providing humanitarian needs. Because of his expected work schedule, amateur radio activity will be limited at best. His QSL Manager remains F2VX. Alex, PA3DZN, is also on the way to Rwanda.

MARSHALL ISLANDS. Ken, V73C, has been on 20 meter CW and SSB between 2000 and 0400z. Also check 18146 kHz around 0230z. QSL via OKDXA, PO Box 88, Wellston, OK 74881.

THIS WEEKEND ON THE RADIO. The ARRL UHF Contest is from 1800z August 6 to 1800z August 7. Work as many stations in as many grid squares as possible on authorized amateur bands above 222 MHz. Exchange grid square locators. Full contest rules appear on page 116 in July QST.

North American QSO Party, sponsored by the National Contest Journal, starts at 1800z August 6 and ends at 0600z August 7. Exchange name and state/province/country. Check page 126 of July QST for more info.

QRP ARCI Summer Daze Sprint, sponsored by the QRP ARC International, is a phone event that runs from 2000z to 2400z on August 7. Exchange signal report, state/province/country and QRP number if a member. Non-members send power output. Details appear on page 126 of July QST.

The YO DX Contest, sponsored by the Romanian Amateur Radio Federation, RARF, is from 2000z August 6 to 1600z August 7. Work CW and/or phone on 80 through 10 meters. Exchange signal report and ITU Zone. Romanian stations will send two letters indicating their county. For more information, see page 101 in August QST.

> >options open.
>
> As surprising as it may be, I agree with Mike on this. HF does offer things
> VHF+ doesn't, and I'd also recommend learning the code.

Warning: The following are the words of a newbie... :-)

But can't I get my NCT passed and while my documents are on the way study
for
the Morse Code? I thought I read I can take the 5wpm test _any_ time after
I passed the NCT test. That way I thought I could get involved with ham
radio sooner, and expand as my skills grow. Just because I take the NCT
dosn't _limit_ me from moving up, right?

Maybe I'm wrong about the timing on the tests and what is allowed, but I
guess
I thought anyone with a NCT could simply pass the MC test to get to Tech
Plus.
Am I wrong? I am interested, because I am a ham wanna-be, and am looking
at
test options. I heard the licence takes a couple of months to get once one
has passed the exam, so I'd like to get started now. That way I can beg
for
a HT for Christmas! :-)

2004. Re: S. California Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-05 00:07:37 UTC
From: garlau@eis.calstate.edu
Message-ID: <31rvs9$e2d@eis.calstate.edu>
Source record: 262206

The 147.21+ repeater that was mentioned earlier (where the "BOMB Squad" resides-stands for something like "boys of Mt. Baldy") has a PL of either 151.4 or 156.7 (I forget which it was). They have a good net on Sundays at 7pm with a "Elmers" Q&A after the net (around 8:20pm or so).

One not-so-wide-coverage repeater is W6GNS on 146.175+, located atop the Whittier-Puente Hills, about 25 miles east of downtown L.A. Coverage begins just south of the San Fernando Valley and it's nearly HT-doable southwards to Irvine. Coverage to the east falls off northeast of the Whittier hills towards Pomona and can get spotty if you're at the southern base of the hills (like La Habra).

Call up the Silicon Valley VE group's VE session hotline at 408-984-8353.
That should get you in the right direction.

From a list I picked up at HRO in Sunnyvale, it appears there's testing
done in Oakland (on 9/18) and Hercules (9/17).

Just by the way, BOMB Squad means "Best of Mt. Baldy", just to allay
any fears in that regard...;-) Also, it's not really on Mt. Baldy, but
on Sunset Ridge, which is near Mt. Baldy... And Mt. Baldy is really Mt.
San Antonio, but no one calls it that anymore...

They are at 147.210, + transmit, PL=156.7

The 3Y0PI DX'pedition to Peter I is now in its final stages. The gear and equipment that left the U.S. in October has now found its way home again. It travels to Montevideo, Uruguay; to the Falklands; to Peter I; to the South Shetlands; to Capetown; to Antwerp. There it was put in a sea container and shipped back to the U.S. The boxes I lovingly packed in October are now back in my garage.

Thanks to all of you DX'ers out there for your support and encouragement.

The chapter is closed. 73 to all and thank again.

Hi Sandy!

Sandy has a good point. When I was in junior high school, my local library carried QST. I discovered that they kept the back issues for 5 years, then chucked them. So I had a deal going with the librarian to call me each year when they were going to do the deed. I ended up with several years worth of back issues (which are sitting in my parents basement to this day).

Our local library carries a few years of back issues of QST as well. I suspect they have a similar policy.

My wife absolutely did NOT want a radio in the new Town & Country. So
a friend of mine suggested the Standard rig with the controls in the mic.
It goes under the driver's seat. I take out the mic to talk, otherwise
no radio to bother her.

>>Every kit builder should have a wattmeter and a dummy load,(available
>>from Radio Shack).

If you follow the directions and tune up as we say, the unit will
operate and meet spec properly! Do we have to make the kits work
without the builder reading the insrtuctions?
d

>Heath sure did. They told you how to align their kits. If it was beyond
>the stated target market, they shipped that section, pre-built and aligned.

Is reading English and following directions, "beyond our target market"?

>So you see, if Ramsey would look at the dichotomy between the abilities
>of the people who are buying this stuff, and the requirements of the
>kit, and do what is needed to close the gap, we wouldn't have to have
>these discussions again and again. They have several options, but don't
>seem to choose any of them.

Greg, why don't you build one and tell the folks how hard it is??
Call me and I'll send you a kit for nothing - is that reasonable?
My number is (716) 924-4560, no sorry - you can't use the 800
number. Remember ask for me personally... and that phone number
works for all you other folks out there too, quit your belly-
aching and call me if you have a question, problem or gripe.
Fair enough???

2015. Kenwood TM-733A surprise features and bugs [LONG].

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-05 03:50:51 UTC
From: steve@vigra.com
Message-ID: <STEVE.94Aug4205051@susie.vigra.com>
Source record: 262249
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I just put power to my new Kenwood TM-733A, made the first pass through the manual and tinkered with the controls. I've found some pretty interesting features and bugs, and got a few questions. Please post any responses (especially answers) to r.r.a.equipment, or e-mail me and I'll summarize. Thanks!

Here goes!

#
The radio is fully *DTMF REMOTABLE*! This one really surprised me. I was considering the Alinco 600T just because of this feature, so it's nice to find that the 733A can do it too. I'm suprised they don't advertise it.

The manual says this:
"... the TH-7 Dual Bander can be used as the controller in place of a keypad-equipped microphone. The TH-7 is a compact, handy FM transceiver available in the General market only."

Well, I've never seen a TH-7, but my Yaesu FT-530 can control it just fine. The DTMF control keys are exactly as shown on page 81 of the manual. Note that the microphone is *active* all the time, so any ambient DTMF tones near your mic will also change rig settings. This includes tones coming in on the other band and out the speaker! The mic is sensitive; I would disconnect it if you intend to run remote-controlled for any length of time.

#
Cross-band repeat isn't documented. (Why do manufactures insist on hiding this one?) I've learned how to enable CBR, but only via the remote control/mic (sequence is "D,C"). Anyone know a front-panel key sequence? To get full-duplex cross-banding, enable the Automatic Band Change (A.B.C) first.

#
The DTMF Paging & DTMF Squelch protocol (AAA*BBB) is compatible with my Yaesu 530. This is good, especially for low-power extender applications. Is this a common standard?

#
The Automatic Simplex Checker (ASC) (p. 60) is a complete joke. I don't know who designed this one, but they must have had a clear view of their colon at the time. It breaks your reception every two seconds or so to check if the input channel is receivable. The break is *very* noticable, and often deletes whole words. I think it's

equivalent to using the Scan mode between the input and output repeater frequency. I can't believe they boast this as a feature in all their literature. Am I missing something?

#

There are some serious bugs in the "DTMF Monitor" feature (Page 63: [PTT] + [DWN] + Power On). This feature supposedly lets you hear the DTMF tones you are transmitting. The first problem is that it only gives you a short tone from the internal speaker. This is not true to the transmitted tone that lasts as long as you hold the key. The much bigger problem is that it *mangles* the start of the transmitted DTMF tone. I have no idea why, but most repeaters interpreted it as multiple tones. It sounds like the short monitor tone is being mixed in and transmitted. It's definately broken. Has anyone else heard this?

#

There are two undocumented icons on the display; one is the "heart" symbol. Anyone know what that's for? It could just be a spare. I noticed they used the odd "spade" symbol to indicate AM receive, so maybe these were last minute extras. Dunno..

The other symbol is the graphic "X" for the far right button under one of the F-shifted menus. It seems to do something, but I can't figure out what. Any ideas?

#

From looking at the schematic, it seems that the only programmable memory is physically located in the detachable front-panel. I think this means that if I use my front-panel on someone elses radio, I get all my memories and settings. Anyone try this?

#

I've heard that this radio can be fixed for extended receive, including the Forbidden Band. I can't find any 800 MHz mods on the regular ftp sites, probably because this radio is pretty new. Has anyone found one?

#

You can't have two useful keys on the handset at once. Namely, the "Open Squelch" feature and the "Direct Entry" feature. Both of these want to be on the PF key *only*. Is there any way to put either of these on the other programmable keys? I wouldn't mind giving up the Call key for Open Squelch, but there's no way I'm giving up Direct Entry.

#

The "musical" frequency readback (p. 77) is pretty useless (for me anyway). It plays the digits as musical tones, which you are supposed to recognize and associate with digits. Hmm.. I'd rather have morse code readout or just a simple tone count. This would be especially useful for remote control.

#
Exactly what is the difference between Noise and S-Meter squelch? As near as I can tell, one has a digital level indicator, and the other doesn't. Is there some environment where the difference shows?

#
The whole front-panel is connected to the rig by *four* wires (yep, including the volume/squelch pots.) According to the schematic, these are: power, ground, data in, and data out. I'm wondering how hard it would be to make a PC interface for this thing and replace the whole display and controls with a full-screen version. It wouldn't surprise me if many of the programming limits were also imposed by the front-panel, and not the unit.

Overall, I've very happy with this radio. The remote mount kit gives me some really nice installation options, and the quick-detach panel is super theft protection. it's loaded with bells and whistles, and seems to perform well so far. I'm anxious to hear how others like this radio.

Happy Hacking!
-Steve

I have a friend with a commercial repeater on a splinter. It would be
nice to be able to carry one radio to access to both amatuer & commercial
repeaters. My 530 only transmits up to 462. It would be nice also to
use it as a GMRS radio. And dont give me any of this type acceptance
BS. I've checked the thing on HP spectrum analyzers. I sit next to a
8568B for eight hours a day. (barf)

For the past several weeks the keps for KO25 have not been producing accurate AOS, TCA, and LOS times. It is my belief that a more accurate set of keps for KO25 is the object NASA lists as Catalog Number 22828. W5IU, K5EKH, KG5OA, and myself have confirmed this by monitoring numerous Cat No. 22828 passes. Below is the current keps for the object with Cat. # 22828. Try these out in your tracking program and see if they do a better job for KO25. Please leave a message on KO23 or KO25 to let me know how this set works.

TO ALL RADIO AMATEURS BT

For the past several weeks the keps for KO25 have not been producing
accurate AOS, TCA, and LOS times. It is my belief that a more
accurate set of keps for KO25 is the object NASA lists as Catalog
Number 22828. W5IU, K5EKH, KG5OA, and myself have confirmed this by
monitoring numerous Cat No. 22828 passes. Below is the current keps
for the object with Cat. # 22828. Try these out in your tracking
program and see if they do a better job for KO25. Please leave a
message on KO23 or KO25 to let me know how this set works.
73 Ray, WA5QGD

WWV broadcast time and frequency information from Hawaii and Colorado on
2.5, 5, 10, 15, and 20MHz(Colorado only). Sometimes I'll listen for 15 minutes
striaght. Am I weird? What was really weird was listening when they added that
leap second at the end of June. The minute from 30 Jun 23:59 to 1 Jul 00:00
took 61 seconds! Quite an event for the world's most accurate ticker.

Asterisk indicates predicted value.
For information concerning ASAPS for an IBM PC (or compatible) contact IPS.

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.
==========
2. FLARES AND SHORT-WAVE FADEOUTS

All M flares with an energy greater than or equal to M1 are tabulated under
class M flares.
However, times of fade-outs are shown only for flares with an energy greater
than X-ray class M3.

DATE CLASS M CLASS X FADEOUT POSSIBLE
FLARES FLARES ON DAYLIGHT CIRCUIT
07 Jul 1

2.1 Comments on Solar Activity.
An M1.3/1N flare was observed on 7 July at 2100UT. Solar activity was at very low to low levels throughout the rest of the month.

The 10cm flux exhibited a similar pattern of variation to that of the previous month, with values declining slightly during the second half of July. The peak value for the month of 88 occurred on 7 July.
==========
3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)
DATE COMMENTS

1-3 July Unsettled to active levels observed. This activity was a continuation of the recurrent disturbance which began 26 June.
14-16 July Active to minor storm levels were observed at times on 14 July, with unsettled to active levels observed over the next two days.

27-29 July Isolated active periods were the only sign of a previously strong recurrent pattern of activity that commenced in January of this year.

3.1 Comments on Geomagnetic Activity.

Apart from activity observed 1-3 July, there was little sign this month of the recurrent patterns of activity observed since January 1994 and June 1993 respectively. Activity from 24-29 July was less than that observed during the corresponding period of previous solar rotations. This was due to a combination of seasonal effects and changes to the structure of the associated coronal hole. A second coronal hole, which last caused an increase in activity from 10 - 12 June, appears to have closed. Activity observed from 14-16 July may prove to be the start of a new recurrent pattern. The peak A index for the month of 31 was observed on 16 July.
==========
4. IONOSPHERIC DISTURBANCES (for Sydney)
DATE MUFs

1 July Spread F observed during local night.

9-10 July Spread F observed during local night.

14-15 July Enhanced 30-50% from 14/12-16UT and 15/11-14UT.

16 July Spread F observed during local night.

18 July Spread F observed during local night.

20 July Spread F observed during local night.

25 July Spread F observed during local night.

27-29 July Spread F observed during local night.

31 July Spread F observed during local night.

4.1 Comments on Ionospheric Conditions.

Sporadic E was commonly observed during local daylight hours early in July.
Spread F was occasionally observed during local night-time hours, particularly
during the second half of the month. No significant depressions were observed
during July.
==========

2026. Re: Ramsey SlyFox

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-05 06:19:59 UTC
From: JoeMoell@cup.portal.com
Message-ID: <119257@cup.portal.com>
Source record: 262247

>IMHO, the gist of the original post was, "the SlyFox doesn't meet FCC specs
>and there is a 73 article on the way that will verify that fact!".

Well, if that's what the post said, the writer did not read the article carefully.

>It was
>posted so far in advance of your article that it had expired by the time
>I got my 73 and read the article. It was that original posting which
>prompted the start of this thread, not your article.

I talked to the Sr. Technical Editor of 73 today. He said that it is their standard policy to fax manuscripts of reviews to manufacturers for comment. The mfr is allowed to correct factual errors, but may not change the editorial content and "tone" of an article. He also said advance info on this particular review was not given to anyone else. We both concluded that any "leak" must have come as a result of the preview by Ramsey. Note that Ramsey did not dispute the facts in the article.

>Then get with the manufacturer and fix the problem! After all it is simply
>a paper problem. The manual is not fixed in concrete.

I hope Ramsey corrects the manual. Perhaps they have by now, but they certainly have not stated so. The last post from the company here said: "The manual clearly states to spread the coils for max power output." This is not only misleading, but it also indicates a continuing denial of any deficiency on their part.

>In the past, (sigh), a reputable magazine would have immediately
>notified the kit manufacturer of any problems with the kit (including the
>manual). They would not have published something designed to hurt sales
>unless the company refused to fix the problem.

My design was not to hurt sales, and I'm sure 73 is not interested in hurting sales, either. Overall, the article is not nearly as negative as you are making it out to be. Read the whole piece again.

>If it had been me reviewing the kit, I would have immediately notified
>the company that the manual needs improving. I would have published the
>suggested manual improvements in the article and posted them on
>oak.oakland.edu (did you?)

Ramsey was notified, both by me and by 73 Magazine. The deficiencies in the manual are clearly explained in my article. So except for the Internet post, everthing has been done just as you would have it.

>I would not have taken a "poor me" attitude. ...
>a biased review of a reasonable product.

As a famous President said, "There you go again!" Please quote me a sentence from the review that shows a "poor me" or biased attitude. Actually, I rather enjoyed the challenge of getting the thing working, but I kept in mind how it would have been for someone who was building this as a first kit. Remember, the manual says this kit is not for beginners, but the catalog does not give any warning before purchase. Anyone having trouble with the kit because of its incomplete instructions will learn just what to do to fix it by reading my article.

>There is nothing wrong with the kit as far as I can tell, just with the
>manual.

You'd better read my article again. There were a couple of other important problems. The most important was that final output power (with proper tuning) never met specs on BOTH the kit and the Ramsey-wired unit. Yes, I measured and remeasured carefully, because I couldn't believe it at first. I ended up checking on no less than four different power meters, including two Bird 4431's, the last one traceable to national standards. Two different dummy loads were used, both mil-spec microwave types, good to DC through 3 GHZ, so it wasn't a SWR problem.

>An addendum mailed to previous purchasers and included in the
>manual solves the problem.

You're kidding, aren't you? I have never heard of any small kit manufacturer sending out notices to previous buyers, unless safety was at stake. I bet they would laugh if you suggested it. Besides mail order, Ramsey products are sold for cash by distributors, in stores, at conventions and even at swap meets. There is no way for them to know who owns which kits. And who knows how many are in the distribution pipeline? 73 actually did Ramsey a service by publishing important information that would be difficult to successfully distribute by direct methods.

73 de Joe K0OV (not speaking for 73 Magazine)

2027. Obtaining a US callsign

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-05 06:24:36 UTC
From: Felix Ng <fng@yvr.cyberstore.ca>
Message-ID: <BK.BW.776067876.1103527590.fng@yvr.cyberstore.ca>
Source record: 262201

What are the requirements for getting a US callsign? I currently have
a Canadian callsign. Just curious.

I was finally successful in contacting STS-65's packet robot
after many attempts, so would like a card. Can someone please
tell me the address to send my card to?

thanks

Hi John, before you get blasted for misquoting, it was I who wrote the
following quoting from Joe's '73' article. Things are a little confused
because the original email out of ucsd.edu to which I objected occured
before I got my July '73' and therefore could not have been Greg's.
Sometimes these interchanges take on an Abbott and Costello, "Who's
on First?" flavor.

>>>Quoting again, "But when I spread the turns on the kit unit... and
>>>retuned the final capacitor, power increased dramatically... The second,
>>>third, and fourth harmonics of the kit now measure -70, -50, and -70 dB
>>>respectively, _EASILY_ satisfying FCC requirements. All spurious
>>>emissions are better than 54 dB below the carrier..." (emphasis mine)
>>>Every kit builder should have a wattmeter and a dummy load,(available
>>>from Radio Shack).
>
There doesn't seem to be any objection to the way the kit works, just that
there was not quite enough tuneup information in the manual. Maybe an insert
that says, "The low-pass filter must be tuned such that the crossover
frequency is higher than the frequency of operation" would do the trick.
There are minor mods for the FX transceivers posted on oak.oakland.edu
and I hope that Joe will post his suggested additions to the SlyFox
manual there and share them with Ramsey Electronics.

I'm still a no-code tech, got heavily involved in the local club, rose to the rank of treasurer of the club (they won't let me be president, General or higher restriction) and am planning to upgrade very soon, though quietly. I've worked 6m and 2m DX, played with some satellites, worked HF DX under the club call, and have generally had a blast! Upgrade at your own pace, be couteous and thoughtful at all times and enjoy this hobby to the fullest. It really is something wonderful.

That's not what an Old's delaer told me, they should get their policies
in sync.

Andy N3LCW

What did the dealer tell you that was different? Of course you should
realize that the dealers are independent businessmen that may not choose
to keep informed about all the various details of the business. If
a decent sale was contingent upon getting that information I'm sure
ANY dealer would find it. THEN they'd know about it for the next
customer that asks.

Ahhh... I love the free market system.

2033. Where to QSL Shuttle Please ??

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-05 11:02:00 UTC
From: james.mollica@pics.com
Message-ID: <12886.366.uupcb@pics.com>
Source record: 262246

PR.I was finally successful in contacting STS-65's packet robot
.after many attempts, so would like a card. Can someone please
.tell me the address to send my card to?

POSTCARDS FROM SPACE--
SAREX QSL CARDS

Participating in the Shuttle Amateur Radio EXperiment can be an exhilarating experience. But, as many hams know, waiting for that coveted QSL card requires a lot of patience. Designing a card for the ultimate DXpedition can be a lengthy process. Here's a behind-the-scenes glance at producing a SAREX QSL, and some tips to help you get your card.

After a SAREX mission, ARRL and the SAREX Working Group work with the crew members to select photos from that mission, and design and layout the QSL card.

This may take a few months because of the busy schedule of the astronauts, among other things. Once the card is designed and printed, ARRL forwards the QSL cards to whichever Amateur Radio club is involved with the awesome task of managing the cards.

In the past, amateurs sent their contact and listener reports directly to the managing club. Now, all reports should be sent to ARRL Headquarters.

In order for the managing process to run smoothly, please include the following information in your QSL or report: Shuttle flight number (STS-XX), date, time in UTC, frequency and mode (FM voice, packet, sstv or fstv). This documents the contact or listener report. In addition, you must also include an SASE using a large, business-sized envelope if you wish to receive a card. No cards are distributed without the proper postage affixed or sufficient IRCs included.

The following clubs have graciously volunteered their service for handling QSL cards for the following missions:

STS-58 Connecticut DX Association
STS-60 Cowley County Amateur Radio Club, Kansas
STS-59 Orange Park Amateur Radio Club, Florida

QSL ADDRESSES

STS-56 QSL
C/O Vienna Wireless Society
P.O. Box 418
Vienna, VA 22183

STS-55 QSL
IBM Amateur Radio Club/1993
P.O. Box 1328

Boca Raton, FL 33429-1328

STS-57 QSL
C/O Miami County ARC
P.O. Box 214
Troy, OH 45373

STS-60, STS-58, STS-59, STS-65 and STS-64 QSLs
C/O American Radio Relay League
Educational Activities Department
225 Main Street
Newington, CT 06111

GENERAL SAREX QSOs

The extremely busy work schedules of the Astronauts may sometimes reduce your chance for an unscheduled, random contact with the Shuttle. The SAREX Working Group recognizes the longstanding commitment of the Amateur Radio community in supporting SAREX activities and attempts to schedule as many opportunities as possible for general ham contacts during flights.

That's correct. The only consideration is that the FCC doesn't want more than one license application per applicant in the pipeline at once. That won't be an issue in upgrading from Tech to Tech Plus since all you need is the CSCE from the VE. But if you upgrade to General, you should wait until you get your Tech license before sending in the General paperwork. The VEC will normally hold your application in this case.

2035. What HF antenna for Ford Explorer?

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-05 11:40:44 UTC
From: g8@mvuss.mv.att.com
Message-ID: <Cu28Fx.JDF@nntpa.cb.att.com>
Source record: 262255

Questions for anyone with an HF mobile installation in a Ford Explorer or similar vehicle -

I'm concerned that the high back of the vehicle overlaps too much of a bumper mounted whip antenna for the antenna to radiate effectively. Is this really a problem or have you found a different (better) mounting arrangement? Is anyone using a front bumper mount? If you use a rear bumper mount, does the antenna get in the way of opening the rear door?

Are mobile antennas reasonably close to 50 Ohms or do you find it necessary (helpful) to use an antenna tuner?

Finally, do you have any specific antenna recommendations. There sure are a wild variety of antennas advertised.

Felix Ng (fng@yvr.cyberstore.ca) wrote:
: What are the requirements for getting a US callsign? I currently have
: a Canadian callsign. Just curious.

If you're not going to use your reciprocal privileges, which you as a Canadian with a VE license have automatically and include everything you can do that an Extra can also do (save give exams), you can get a US license if you can provide a US address, but you must pass the US exams to do so (and wait for the thing to come, of course). The only restriction is that you can't be an agent of a foreign government. The joker is that, once you get a US license, your reciprocal privileges are VOID and you're stuck with your US license class. Since there is nothing an Extra can do that an Advanced + 12 wpm licensee cannot also do (excepting 420-430 MHz), you may, if you hold those qualifications and take our exams, wind up losing privileges here unless you get an Extra license (20 wpm and 5 theory exams - the first three in my judgement about cover the Basic exam, the fourth is about as hard as the Canadian Advanced exam, the fifth is too but contains more questions).

Still interested in US licensing, despite the joker? Or just want a fuller description of what we go through? Let me know and I'll describe it more fully.

Source record: 262208

Grahm Davies asked about what is needed to do WEFAX reception of
weather charts, satellite images, and press photos. Very little is needed.
Any radio which has single side band (SSB/ USB) capability will work. I
have used both my Sony 2010 portable receiver and my Icom 737 transceiver
with good success. The interface needed can be made for between $10-$15
and is simple. It connects directly to the serial port by a modem cable.
The audio output of the radio goes into the interface (FM demodulator).
Plans can be found on page 40 of Sept. 1991 QST. The most popular program
to use is JVFAX. It is available at various FTP sites and is said to be
freeware, not shareware. I am aware of no legal problems with receiving
these images over the airwaves. I have used my setup to capture
images (WEFAX) from Norfolk, VA and from Europe. I have also received
press images from South America. Anyone who wants plans can send me a
SASE (I'm in the '94 book as KB1AWV).

Just to repeat what has been posted here before, THE FCC IS NOW ISSUING TECHNICIAN PLUS LICENSES. This means, if you learn the code, you will need to send in a form 610 and get a new license. (Maybe need isn't quite right, but it is SOP now, so it should be done.)

Not that this should change anything. The team I've worked with before routinely has someone who has an application pending. They generally wait until the license comes and then send in the paperwork. (They, of course, discuss this with the applicant so they know what is going on.)

Basically, not be an agent of a foreign government, have a US mailling
address, and pass the exams.

In case you don't know, the current license structure in the US,
the exams need for each, and a rough idea of priviledges is as
follows:

NOVICE Novice Theory & 5 wpm code Limited HF priviledges
TECHNICIAN Novice and Technician Theory All VHF+ priviledges
TECH. PLUS Novice and Technician Theory Tech and Novice priv.
& 5 wpm code
GENERAL Novice, Tech, and General Tech priviledges plus
Theory & 13 wpm code most HF priviledges
ADVANCED Even more theory & 13 wpm General plus more HF
EXTRA More Theory (!) & 20 wpm All priviledges

This should give you a rough idea.

Hi!
I'm hoping you people in this newsgroup can help me out.
(In fact, I hope this is the correct newsgroup to ask this in...if not
please forgive the waste of bandwidth)

I'm doing some preliminary research on Positional systems, specifically
GPS (and to some extent LORAN-C). Can anyone point me in the right direction
of: 1) Overviews 2) Manuals/how-to guides 3) Implementation details
Also, how feasible is it for someone to create their own GPS receiver? Any
tips?

Thanks for the help

Keith

|> Our family had one of the last CB call signs back in the late 1970's.
|> So many call signs had been issued that FCC had to start issuing call
|> signs with four letters. We were issued KAAN9730. About a year after
|> receiving the call, licensing was abolished.
|>

Yes, that was the beginning of the end. 4x4 callsigns were not (according to the FCC's own callsign regulations) supposed to be issued to land based services, so all of them were actually in violation of an FCC regulation.

And then the FCC stopped issueing callsigns all together. Of course, they never changed or rescinded any of the regulations governing CB operation, so you are still required to identify every 10 minutes with your FCC issued callsign. This being impossible, there is no way to legally operate a CB radio. Remember that the next time someone siggests running packet on CB and your tempted the jump down their throat about it not being a legal form of emmissions.

=========
SpaceNews
=========

MONDAY AUGUST 8, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* DOVE NEWS *
=============
Jim White reports that DOVE is running a new set of software that tests the digital to analog converter and other hardware and software capabilities of the satellite. DOVE now transmits digitally generated tones through the DAC and exercises software that implements two way communications between on-board processors.

[Info via WD0E]

* REVISED AO-13 SCHEDULE *
==========================
A revised AO-13 transponder mode schedule for 1994 Sep 12 - Dec 19 is presented below.

During the severe eclipses at the end of October, the mode-B transponder will be ON from MA 0 to MA 30.

An expedition to The Gambia (C56) coincides with this period, and this change is in response to its specific request.

N QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Sep 12 - Dec 19
Mode-B : MA 30 to MA 150 |<- OFF Oct 22 - Nov 07 for eclipses
Mode-B : MA 150 to MA 190 | max duration 2h 12m
Mode-BS : MA 190 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-B : MA 230 to MA 30 | Alon/Alat 230/0
Omnis : MA 250 to MA 140 | Move to attitude 180/0, Dec 19

The battery charge state is of paramount importance during eclipse seasons. As always the command team may have to have to make temporary changes to the published schedule. In that case we will try to minimise the inconvenience, setting Mode-B OFF from MA 230-256 in the first instance.

Please don't rely on gossip and rumour! Continuous up to date information about AO-13 operations is always available on the beacons, 145.812 MHz or 2400.664 MHz in CW at 0 & 30 minutes past the hour, RTTY at 15 & 45 minutes past the hour and 400 bps PSK otherwise. These bulletins are also posted to Internet, ANS, Packet, PacSats etc, and many international newsletters. A 400 bps PSK decoder is available from G3RUH and several DSP products; display software P3C.EXE etc from many Amsat groups.

The active command stations are listed below, and constructive feedback about operations is always welcome.

Peter DB2OS @ DB0FAU.#NDS.DEU.EU
James G3RUH @ GB7DDX.#22.GBR.EU
Graham VK5AGR @ VK5WI.#ADL.#SA.AUS.OC

The above may also be reached via Internet (callsign@amsat.org) and KO-23. Please remember to state clearly a return address.

Notes prepared on behalf of, and in total cooperation with the above by:

James Miller G3RUH @ GB7DDX.#22.GBR.EU 1994 Aug 01 [Mon] 2014 utc

* WEBERSAT NEWS *
==========
WEBERSAT (WO-18) is broadcasting new pictures and light spectrometer data weekly. Software for the extraction, decoding, and display of spectrometer data, written by Bob (KB7KCL), is available by request on AO-16/LO-19, or directly from Weber State University. Monday utc, continues to be the day for the broadcast of the most recent spectrum, along with the week's WOD.

WeberWare 1.0, 1.2, 1.3, or a similar program is required for picture extraction, decoding, and display. WeberWare 1.3 is the current software version, and is available from Weber State University, AMSAT-NA, or AMSAT-UK. The most recent WeberSat double field image is number 9/13.

WO-18 is currently sending another portion of the base line survey of all telemetry channels. The selected channels are 0x36 54 +Y Temp, 0x37 55 PSKHPA Temp, 0x38 56 +Z Temp, 0x39 57 Horizon Sensor 1, 0x3A 58 Spectrometer Light Sensor, and 0x3B 59 Impact Sensor. This is an excellent opportunity for a student, group, or class to use this data to better understand WeberSat's experiments. WOD collection and broadcast will adhere to the following schedule:

28 July/Week2: **Variable (Requests for specific channels will be taken.)
04 August/Week3: BCR, 21 22 29 2F 33 36
11 August/Week4: Temperatures and impact detector, Ch# 14 2F 30 35 3B 40
18 August/Week1: Array currents, Ch# 26 27 28 29 2A 2B
25 August/Week2: **Variable (Requests for specific channels will be taken.)

**If no requests are received for specific WOD, then another part of the base line survey of all telemetry channels will be conducted.

What was really sad, IMHO, was that no one on our local net caught it! (I would have commented, but my QTH is in a hill shadow from the repeater)

Refresh my memory: Is it *illegal* or just poor operating practise (clearly, it's the latter).

2046. USCG CW Code Practice Broadcasts

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-05 15:20:37 UTC
From: rdkeys@csemail.cropsci.ncsu.edu
Message-ID: <31tlc5$keb@taco.cc.ncsu.edu>
Source record: 262240

Regarding the CW code practice sessions transmitted by the USCG
CAMSLANT NMN station:

1. I monitored last night to see what was up, from about 2000 UTC to
about 0400UTC, as I was in the shack for most of that time running
40 meters.

2. The only frequency I heard that was sending bulletins or code
practice material was 5870khz (loud and clear). All others were
not sending or were engaged in standard marine HF CW operations.

3. The 5870khz frequency appears to be a general bulletin broadcast
frequency. At 0018UTC the High Seas Forecast was sent, followed
by miscellaneous bulletins. At 0155-0400 or so, the CW code
practices sessions came by at 6-24wpm. The text was standard
broadcast material, bulletins, and coded groups. It was fine
practice, and would be of value to anyone trying to learn the code.

4. I would heartily recommend these broadcasts as good code practice
material for anyone wishing to learn the code, since they contain
much more varied and different sorts of material than do the ARRL
broadcasts.

Good Luck, and enjoy....

2048. Re: Ramsey SlyFox

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-05 15:33:54 UTC
From: greg@netcom.com
Message-ID: <gregCu2J8I.Lt@netcom.com>
Source record: 262273

In article <hY9RUEN.jramsey@delphi.com> jramsey@delphi.com writes:
>Greg Bullough <greg@netcom.com> writes:

[mis-attributed text deleted]

>If you follow the directions and tune up as we say, the unit will
>operate and meet spec properly! Do we have to make the kits work
>without the builder reading the insrtuctions?

First, John, a number of criticisms which have been leveled have
been by very respected and capable builders. They are credible.

Second, you consistently ignore those who point out the dichotomy
between the way in which the kits are marketed (please read
your own ad copy) and the degree of technical experience, expertise,
and equipment required to be assured of a final product which meets
FCC specs. I know you disagree with the reviews... ...however they
have some credibility, and are sufficient for me, as a consumer, to
be circumspect in my approach to the product.

Why, John, do you continue to publish ads which are very tempting
to new hams who are not fully equipped to judge the magnitude of
the task which they are undertaking? According to Joe's review,
the SlyFox manual indicates that you'd rather see a newcomer
pick a different first project (presumably because of the RF
section). Why doesn't your ad copy for the SlyFox and for the
FM transceivers reflect these doubts?

>>Heath sure did. They told you how to align their kits. If it was beyond
>>the stated target market, they shipped that section, pre-built and aligned.
>
>Is reading English and following directions, "beyond our target market"?

The ability to follow those directions, and to understand whether they
have successfully complied, is beyond the ability of a certain percentage
of those who will be tempted by those who will be tempted by: '...breaks
the price barrier... ...proven EASY assembly... ...for less... ...pro
look.' I'd quote the ad copy on the technical requirements for 'EASY
assembly' but there isn't.

Many readers won't realize that they'd be much better off, dollar for
dollar and feature for feature, buying a new (or used) HTX-202/404,
if their goal is to get a few watts on VHF or UHF. They don't have
the experience and circumspection to understand that they aren't
saving 50 or 75 bucks, by the time they meet their (likely) goals.

>>So you see, if Ramsey would look at the dichotomy between the abilities
>>of the people who are buying this stuff, and the requirements of the
>>kit, and do what is needed to close the gap, we wouldn't have to have
>>these discussions again and again. They have several options, but don't
>>seem to choose any of them.
>
>Greg, why don't you build one and tell the folks how hard it is??

I'm not qualified. I've been a ham since '76. I built my first receiver from a Heathkit (point-to-point and tubes yikes) in 1973. Like copying code at N WPM, it's just something I do, and things like Cecil points out are obvious.

Now, if you had my XYL, who's been studying off-and-on for her first ticket, and who's done some basic soldering, and who has a good sense for things technical but not a lot of hardware construction experience try one, you'd be more on target with the ability level of many of the purchasers. These are folks with 'potential.' I'll contend that some OT's will buy a kit as a lark, or to a purpose, but that most of the FX-series goes to hams with lots of potential. Success will help them realize it.

>Call me and I'll send you a kit for nothing - is that reasonable?

Thank you, no. I will not put myself in a position of being beholden. And I've seen the FX-146 kit, and the book, and I don't think I'm going to endorse our ad copy. In light of that, thank you, no.

(By the way, folks, I did try and take John up on his offer of testing out the SX-20, but when I did, he informed me that no trial units were available.)

>works for all you other folks out there too, quit your belly-
>aching and call me if you have a question, problem or gripe.
>Fair enough???

But John, when you characterize good-faith reviews, expressions of concern, etc., as 'bellyaching,' how can you expect people to want to work with you? Most of the reviewers have pointed out difficulties in a professional manner. I've said that, as far as I can tell, the products are okay, but I have some real concerns over how some are represented. Heck, I use the PA-10-2 all the time. Best deal going, especially at the discount they gave at Halted.

John, you claim to be responsive to your clientele. How about updating that old ad copy so that you'll have fewer customers for the FX kits, with a higher percentage of likely successes?

Greg

Correct, and the FT-530 will cover 430-450MHz. (I believe this is more than most other dual-bands.)

2060. Cost of a KHz?

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-05 18:48:26 UTC
From: maenpaj@rtsg.mot.com
Message-ID: <31u1hq$8v4@delphinium.cig.mot.com>
Source record: 262148

How much do you think a 1 KHz slice of spectrum would cost you? The results of the first FCC auction for RF spectrum were summarized in Communications Week Magazine.

Ten nationwide licenses were awarded to six paging companies. These mobile licenses were sold in the first auction of RF spectrum. The companies plan to offer a new generation of data messaging and digital paging services.

Company	Cost	License Information
Paging Network of Virginia	$117 Million	Three 50 KHz licenses
KDM Messaging Co.	$160 Million	2 paired 50 KHz licenses
Nationwide Wireless Network	$ 80 Million	1 paired 50 KHz license
	$ 47.5 M	Paired 50/12.5 KHz license
Bell South Wireless	$ 47.5 M	Paired 50/12.5 KHz license
AirTouch Paging	$ 47 Million	Paired 50/12.5 KHz license
Pagemart II, Inc.	$ 38 Million	50 KHz unpaired license

Source: Communications Week, August 1, 1994, page 3.

Hmmmm....le'see now, in the KDM case above that's 2 X 50 KHz pairs for a total of 200 KHz of RF spectrum. $160 Million / 200 KHz = $800 per KHz. I guess a 3 KHz wide SSB channel will cost me $2400!! Hmmmm...le'see now, mebee I can buy 14.313 MHz + or -. Mebee I could get a discount on 14.313 with all of the undesirables driving down property values.

Now the CW vs. Fone crowd will have some hard numbers to argue about. Not only does CW save spectrum but it costs less as well.

2062. Cost of KHz? (re-visited)

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-05 19:27:22 UTC
From: maenpaj@rtsg.mot.com
Message-ID: <31u3qq$9kc@delphinium.cig.mot.com>
Source record: 262149

My buddy in the next cube just pointed out that I was off by a factor of
1000 in my cost per KHz calculation:

> Hmmmm....le'see now, in the KDM case above that's 2 X 50 KHz pairs for a
> total of 200 KHz of RF spectrum. $160 Million / 200 KHz = $800 per KHz.
^^^^^^^^^^^^^

This should be $800 per Hz!!
A KHz costs $800,000

I guess a 3 KHz wide SSB channel will cost me $2,400,000!! I stand corrected
and am heading to the store for new calculator batteries.

|> Fair enough???
|> 73, John Ramsey

You mean all I have to do is get John mad at me and he'll send me
a Slyfox kit?! I sent him a nice letter and all I got was a little
plastic trimmer turner!

Seriously, there are several happy Ramsey builders in my local club,
and I don't see that their kits are all that hard to build and tune.

I recently built up 25 3-element PVC yagi antenna kits for our local
club. Each kit had 4 PVC parts, 4 welding rod elements, and a piece
of coax with a BNC connector already attached. I wrote detailed
instructions to go with them. (I write training materials for a
living). Assembly consisted of putting the elements into pre-drilled
holes, making 2 solder connections, and putting the PVC parts together.
No cutting, stripping, drilling at all!

Out of 25 kits, 12 were assembled successfully. Seven more were assembled
with errors that I had to fix. Six seem to have dropped into a black
hole.

With a <50% success rate with ultra-simple yagi antennas, I think that
I have a good feel for the trials and tribulations that Ramsey and
other kit manufacturers go through. It's tough to hold people's
hands from 1000 miles away!

I would particularly like to applaud Ramsey for their support of
T-hunting. They are one of a very few manufacturers that even know
that T-hunting exists. Thanks for the good stuff!

73, George Lyle, N7TNJ

P.S. - I use the little trimmer turner all the time, but I'm still
waiting for the dedicated T-hunt receiver I described in my
letter :-) G.

2065. Daily Summary of Solar Geophysical Activity for 24 July

NOTE: The Effective Sunspot Number for 23 JUL 94 was 29.0.
The Full Kp Indices for 23 JUL 94 are: 1o 3- 1+ 2o 2- 2o 2+ 3-
The 3-Hr Ap Indices for 23 JUL 94 are: 4 12 5 9 7 8 10 11
Greater than 2 MeV Electron Fluence for 24 JUL is: 4.8E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. The largest flare since
yesterday was an optically uncorrelated B1 at 24/1339Z. Region
7757 (N12W32) is the only spotted region on the disk.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was quiet. The greater than 2 MeV
electron flux at geosynchronous altitude was moderate for most
of the day.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Event probabilities 25 jul-27 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 25 jul-27 jul

A. Middle Latitudes
Active 15/20/30
Minor Storm 05/10/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 15/20/30
Minor Storm 05/10/15
Major-Severe Storm 05/05/05

HF propagation conditions were near-normal over all
regions except the polar night-sector paths where minor signal
degradation was observed for the first half of the UTC day.
Conditions improved to near-normal for the second half of the
day. Near-normal propagation is expected to continue.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>Gary Coffman KE4ZV | You make it, | gatech!wa4mei!ke4zv!gary

Gary

The fact that a license application is pending before the FCC should
NEVER be an issue to the applicant. As long as she has certificates
^^^^^
of completion for all the elements already passed she may take the
next test. As soon as they have their first license in hand they
can operate with all the privleges they have earned.

The actual paperwork for their final license may take a while but
the VEC will handle it. The applicant will have to send the VEC a
copy of the approperate license when each upgrade arrives, before
the FCC will be sent the next upgrade paperwork, but it is not a
problem for any one. With the long delays the FCC had been
experiencing we have seen some applicants with 3 seperate upgrades
pending.

So the message here is come and upgrade as soon as you are ready.
There is absolutly no reason to wait for any paperwork delays.

Steve F
W1GSL
W5YI VE #1697

BTW... Gary the FCC is now issuing Tech Plus licenses, so the upgrade
to Tech Plus is treated no differently than any other upgrade.

>From Tad Cook, KT7H
Seattle, WA August 5, 1994
To all radio amateurs

SB PROP ARL ARLP031
ARLP031 Propagation de KT7H

Solar activity is quite low. Over every day last week the flux values were lower than the average for the previous ninety days, and both the flux and sunspot numbers were slightly lower than the preceding week. This does not look good for HF propagation in general, and the higher bands in particular. At least geomagnetic indices have been quiet and in the single digits. The only unsettled day last week was July 28, when the A index went to 17 and the K index briefly to four.

Activity should pick up a bit this week, with the flux expected to stay around 80 until the middle of the month. There may be some slightly active periods around August 12 and 19. Flux values should drop back to around 75 by August 20, and remain there through the beginning of September.

Sunspot Numbers from July 28 through August 3 were 25, 11, 25, 14, 33, 24 and 19, with a mean of 21.6. 10.7 cm flux was 74.8, 75.7, 75.3, 75, 74, 75 and 76, with a mean of 75.1.

The path projection for this week is from Phoenix, Arizona to the Marshall Islands.

First of all just think of it as a Technician class license. It's a Tech
Plus if you pass the code test. And yes with any license you may upgrade
at any time you want to. If you want you can even take the code test
while you are waiting for the "No Code" license. But remember the new
upgrade can not be sent to the FCC until you actually have a valid call
sign (the form 610 requires your callsign and a copy of your license).

I have tried the wavelengths that were e-mailed to me and found that
I could hear the various beeps/tones on 10MHz but not on the others.
They may very well come into there own at other times of the day I
guess.
Thanks for the replies

I operate without problems from my Plymouth Voyger ('89) van using 300 Watts output on 2 meter SSB to a rooftop horizontally polorized omni antenna. Horizontal only because of convention used by SSB/CW operators on 2m. I did install a one inch wide by 3 inch (short) length rf ground strap between the power amplifier and the floor pan. Ofcourse all power cables go directly to the engine compartment battery. I did, however, shield the BIG power lead to the power amp with more of the one inch wide braid. I enjoy SSB because of the several hundred mile range without waiting for a repeater to free-up. Good luck with your installation. 73, WE7L (grid square DM41UN) 74551.1275@compuserve.com

After using a number of mounting systems, I have come to the conclusion
that nothing really beats a properly installed bal mount. I'm sure your
explorer would not like the sheet metal damage though. I have used ball
mounts successfully with VW buses and a Chevy Suburban.

I'v had less success with bumper mounts, too much shielding.

There was a neat roof mount shown in some magazine some months ago. It
involved using 4 vhf style magmounts spaced about 18 inches in a square
to support a center rack of an hf antenna mount. I've never actually
tried this, though.

Most mobile antennas run an impedance lower than 50 ohms. Unless you use
a tuner your bandwidth is ridiculously low, expecially on 80 and 40.

Have fun.

This is exactly what I recommend. Take an entry-level test as soon as
you are prepared for it (Novice or Tech, doesn't matter, although
you'll probably spend less time studying for the Tech). The goal is to
get the FCC paperwork gears grinding as soon as you can. Yes, you can
use any new privileges (gained by passing new test elements) as soon
as you pass the elements, if you have any current license.
>
>Maybe I'm wrong about the timing on the tests and what is allowed, but I

>for
>a HT for Christmas! :-)
>

Repeating, take the Tech test ASAP, and get the process started. While
you're waiting for your ticket, you may want to use the time to study for
any upgrade elements that appeal to you. A few folks have used the
intervening time to pass all the elements and the day they got their

first license in the mail, they went on the air as an Extra.

2078. Help! How to improve my CW speed?

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-06 01:34:40 UTC
From: ys@isr.harvard.edu
Message-ID: <31upbg$cto@scunix2.harvard.edu>
Source record: 262242

I am a relatively new ham operator. I got my first license in February this year. I operate only in CW, and I am trying to improve my CW skills, and would like any advice or suggestions. I am having difficulty going above 30 WPM. I got W1AW's code proficiency certificate for 25 WPM a couple of months ago, but still can not copy solid at 30 WPM. I do not participate in any contest, and I am mainly interested in ragchewing.

I suspect that one of my problems might be my inability to "copy behind" and "copy in my head." I still copy pretty much letter by letter, and write down everything on the paper. I read much about the importance of copying behind and copying in my head, of course. Here is my problem. When I operate under heavy QRN, QRM, QSB, and whatever else interference might be, I usually miss a couple of letters here and there. So I try to write down everything letter by letter, and try to figure out what is being sent as much as possible from my writing. Because the band condition is usually far from ideal, I found it very difficult to develop the skill of copying behind and copying in my head in the actual QSOs.

If anyone has any suggestion about improving my CW speed, I will be truly grateful. My E-mail address is ys@isr.harvard.edu. Thanks.

2080. Note on FT530 mod

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-06 03:12:18 UTC
From: jwdxt@csn.org
Message-ID: <Cu3FKI.HG6@csn.org>
Source record: 262245

A friend and I just performed the "jumper 13" mod on our Yaesu FT530s. We discovered something that I haven't seen documented yet. My radio looked pretty much as described in the mod files on the oak.oakland.edu FTP site. My radio was purchased in May.

My friends radio was just purchased two weeks ago. His jumper 13 was not a solder bridge - it had a nice little green wire across the jumper - presumably so the mod would be as simple as snipping the wire. HOWEVER, the wire had been put on a little sloppy (it's a very small jumper) and even though we cut the wire, it didn't break the connection. We ended up just removing the wire. But at least it looked to us as if the factory was trying to make the mod a little easier.

>>73, Ken AC1H

Hi Ken, I have a similar (not identical) problem with my S10 pickup (not Blazer). The way I solved the loss problem is to use a four foot piece of threaded stock bolted on the bottom to the bumper hitch hole and on top to the antenna base connector. The threaded stock is pretty close to chassis ground on most HF bands and this configuration eliminates the long parallel run close to the tailgate. The top of your Bronco is much less of a parallel run than the tailgate.

For 20m-10m, I use a 13 ft whip with an antenna tuner. For 40m, I use a homemade bugcatcher with an antenna tuner instead of a base coil or transformer. You just can't beat a center loading coil wider than it is long with at least a wire diameter spacing between the turns. Making the coil was fun and inexpensive. I built a 6"x6"x6" birdcage out of scrap plexiglass and wound #12 wire on it.

Perhaps they generate no problems for reception, but they are certainly
sensitive to RF. A friend has X-10 lights that can be turned on and off
by a nearby amateur transmitter.

The dealer looked at my trade-in w/all the antennas (HF, VHF) and told
me I wan't planning to to the same on the new car. I said I sure was!
He informed me that the warranty would be voided. He went as far as wanting
to put in writing on the sales contract if I installed the gear it would
void all electrical system warranties! He couldn't show me the GM policy
on demand! I told him the hell w/your car and my wife and I left!
What an attitude! I'll blame it on the butt-head business mentality
in this country these days...

: Did I read this right? The *fourth* test is actually the longest.
: It has 50 questions, while the fifth test only has 40.

You did, it's just vague. I meant the Extra exam had yet more theory questions - i.e., another 40 - but wasn't really much harder than the Advanced exam. Sorry about that.

Incidentally, the Canadian Basic has 75 theory/operating questions and 25 rules questions, for a total of 100. Their Advanced exam has 50 theory questions. In contrast, our no-code tech has only 55 questions, just over one third the number on the exam required for the equivalent Canadian license (Advanced qualificatio w/o code), and at a much lower level. By the time you take the US Advanced, you've answered 130 questions. Maybe the "full" no-code license should be no-code Advanced. (Their 12 wpm code test - 3 minutes, >5 errors fails - is harder than our 13 wpm, 5 minute, 1 minute perfect OR 7 questions and you pass version, as well.)

TO ALL RADIO AMATEURS BT

For the past several weeks the keps for KO25 have not been producing
accurate AOS, TCA, and LOS times. It is my belief that a more
accurate set of keps for KO25 is the object NASA lists as Catalog
Number 22828. W5IU, K5EKH, KG5OA, and myself have confirmed this by
monitoring numerous Cat No. 22828 passes. Below is the current keps
for the object with Cat. # 22828. Try these out in your tracking
program and see if they do a better job for KO25. Please leave a
message on KO23 or KO25 to let me know how this set works.
73 Ray, WA5QGD

I noticed that Joe Lo Truglio of MTV's "The State" was wearing a Yaesu baseball jersey at the close of one of the 1993 episodes that was rerun the other night. Anyone know if there is a story behind that?

(There is a "Joseph P. Truglio" in the online callbook, but there's no possibility of match on the birth year.)

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7762 (N06E32) is the
only spotted region. No limb activity occurred.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet levels for
the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to persist at quiet levels.

Event probabilities 06 aug-08 aug

Class M 01/01/01
Class X 01/01/01

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

The FT530 can cover airccraft on am all of 130-170 and 400-450 more or less
plus all of the cellular (rcv only) and the mod is just opening a pad. I
think pad 14 but get the correct information. I have done it to mine and it
is a bear to get at the small spot. I don't think I would try it again.
OTOH it costs a bundle at a hamfest to have it done.

The repeater is open. The remote base its part of is not. The remote
base uses different input frequencies than the repeater pair. At times
the repeater input frequency is used as the remote base input. It is
controlled by a 7k so the remote base is separate from the repeater.
There are eight control ops who keep on turning the 103.5 off when
undesirables surface. I cant fathom anybody turning it off on a
legitamite QSO.
The 449.6375 repeater is open with a 103.5 PL, for legit QSO's.

> Bellcore, NJ Ham: N2ZXE
>

The Houston-to-Dallas path is easily spanned by:
(a) 160 meters
(b) 80 meters
(c) 40 meters
(d) 2m ssb with relatively good antennas and moderate power
(e) 220mHz ssb with equipment/station as above
(f) through a UHF link system known as the "Armadillo Radio Network" , a
privately owned and non-publicly accessible linking system that
covers a goodly part of the state.

So if the dude don't wanna become a ham because he can't talk from Houston
to Dallas, he needs another excuse.

2106. HT at Washington DC Sites?

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-07 04:33:34 UTC
From: david@bu.edu
Message-ID: <321o6v$s4f@news.bu.edu>
Source record: 262150

I will be going to Washington, D.C. and will be touring the usual sites. We have tickets to the State Dept., the Kennedy Center, the Mint and the Capitol. My concern is that these sites will frown on someone walking in with a 2 meter HT on his hip. The state department wants a photo ID and for all I know, they may want to seach us. Am I better off not trying to go into these places with the HT?

BTW, can someone recommend some 2 meter repeaters in the D.C. area?

Thanks.

2107. 2m/11m crossband QSO: legal?

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-07 04:47:12 UTC
From: linley@netcom.com
Message-ID: <linleyCu5EMp.9sG@netcom.com>
Source record: 262152

I have a rather odd question to ask. When me and my dad go camping, we use CBs to communicate (my dad is not a ham)- one in the truck and a handheld. The problem is that the handheld just can't get a good signal out in certain areas due to it's inherently small antenna. I can hear the truck's CB just fine on the handheld anywhere in the camping area. Would it be possible for me to talk to my dad through a local 2m repeater (he could receive me on a scanner), and my dad to communicate back on the CB? Is either communication considered a "one-way" transmission? I've already talked to the 2m repeater owner and he has no objections to this particular use of his repeater. Any Part97/Part95 prohibitions to cross-service QSOs? Thanks.

2108. Santa Cruz radio freqs

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-07 04:54:03 UTC
From: dwied@garlic.com
Message-ID: <321pdb$c2j@garlic.com>
Source record: 262151

I will be moving to Santa Cruz in the fall and I was hoping that someone here could give me a list of repeater frequencies for the local area and if possible some comments on the repeaters.

BTW: any information on police/fire freqs in the santa cruz area will be appreciated.

Thanks in Advance

2109. Yet another new source of RFI, Philips "IQ" light bulbs

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-07 05:17:18 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseCu5G0u.Lov@netcom.com>
Source record: 262153

Was in a Sears today, and saw a display of Philips "IQ" light bulbs.
One has a "microchip" timer in its base that will turn the bulb off
after 1/2 hour. Another has a built in dimmer circuit, and you can
pulse the power to it to step thru 4 different brightness levels.
A note "Bulb may cause minor interference to AM radio reception"
appears below the user instructions. I suppose this might mean that
I will be able to listen to a 50000 watt AM station a half mile away.

These things will probably trash some of our HF SSB and or CW bands
as well.

2110. Re: HT at Washington DC Sites?

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-07 06:07:02 UTC
From: paulot@cais2.cais.com
Message-ID: <321tm6$gj4@sun.cais.com>
Source record: 262157

As far as I've heard and seen in the DC area,no one should give trouble about your HT on your belt.The most they might ask you is not to use it while you are visiting a museum or similar indoors place.I've been here for 10 years and never had to leave anything with a guard,including my cameras,both video and still (but no tripods).
Frequencies,there are a few to check out:
146.760- is a very wide area repeater system and of easy reach within DC
145.350+ is another popular box and easy to hit
145.110- not so easy to hit from the downtown area,but one of the few repeaters located in the District
145.190- is on the State Departments building right there near the Lincoln Memorial.However,as I write this,is down due to technical problems
Last but not least,you MUST check out the eccentric and funny gang know as the Insomnia net the meets on the 146.625- repeater.You always will find someone there and mostly late in the evening,very colorfull and funny folks.
Although I rarely check in to repeaters,my call is N3MGA and would be happy to chat with you whenever your around.The 146.760 box will gbe the best bet.
Have fun in DC!

Ham Radio & More is aired live every Sunday at 6:00pm EST on the
Talk America Network. It can be heard via TVRO satellite on Spacenet 3,
Transponder 9, 6.8 audio. Any radio station can air the show free of
charge. Just contact KFNN, 1510am in Phoenix, Az. for more information
at, 602-241-1510.

The following is the most current list of stations airing the show. It changes
constantly, so call the station to verify times.

Alabama: WHRT, 860am, Hartselle
WAJF, 1490am, Decateur
Arizona: KFNN, 1510am, Phoenix
California: KTOT, 101.7fm, Big Bear/San Bernadino
Colorado: KBCO, 1190am, Boulder/Denver
Conneticut: WATR, 1320am, Hartford/Waterbury
Illinois: WKTA, 1330am, Chicago
WBGZ, 1570am, Alton
Indiana: WIWO, 1580am, South Bend (tape delay)
WPDJ, 1300am, Huntington/Ft. Wayne
Mass: WSSH, 1510am, Boston (50,000 watts)
WKPE, 1170am, Orleans
Missouri: WBGZ, 1570am, St. Louis
Mississippi: WVMI, 570am, Biloxi
N. Carolina: WEEB, 990am, Fayetteville
WCRY, 1460am, Raleigh/Durham
WNCT, 1070am, Greenville
Nebraska: KICS, 1550am, Lincoln
New Jersey: WIFI, 1460am, Trenton
Oklahoma: KTMC, 1400am, Mcalester
Texas: KSEY, 94.3fm, Seymour

New stations are added from time to time. If you listen to Ham Radio & More
on a station not listed above, please e'mail me with it's call and location.
Again, ANY station can air the show FREE OF CHARGE. It is available
on a total of 3 different satellites in 3 different modes.

Do you have a topic in amateur radio you REALLY believe in strongly?
Whether it's abolish the code, increase the WPM code requirements,
increase the number of "closed" repeaters, abolish closed repeaters,
love or hate the ARRL, increase the use of ATV, or whatever, I'm always
looking for guests to be on the nationally syndicated Ham Radio & More
show. It is a place where you can get your point across verbally to a wide
audience. Also, if you're into a new facet of amateur radio, have a unique
amateur radio interest, or what to simply get something off your chest,
Ham Radio & More is looking for you. e'mail me with your topic, phone
number, name, call, etc, and I'll set up a date when you can be on.
Ham Radio & More is aired LIVE every Sunday at 6:00pm EST, originating
out of Phoenix, Az. It has been on every Sunday since April 1991.

I read here recently that CHU in Canada digitally broadcasts the time between the 30 and 40 second marks. Does anyone on here know the format of the data? I recalled that the encoding is Bell 103 (300 baud) so I tried hooking up an old Hayes Smartmodem 1200 (which was designed with Hams in mind) to see if I could receive anything at 300 baud FSK. No luck.

Thanx!

Thanks for the info. The "advantage" to the ARRL practice is access
to the QST text used in the session as a check. But then, wouldn't
someone who has access to QST most likely ALREADY be a ham? ;{)

IMHO, I believe this would not be permissible. There are no provisions in Part 97 for routine cross-band communications between the amateur service and the citizens radio service. I am surprised the repeater owner condoned this. He's probably not too concerned about your license (or his, for that matter).

2123. Help! How to Improve my CW Speed?

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-07 16:28:18 UTC
From: ys@isr.harvard.edu
Message-ID: <323232$2ql@scunix2.harvard.edu>
Source record: 262099

I posted my article a couple of days ago, and Jim, WA6SDN, thought that it was a joke. I just wanted to let everyone know that it is not a joke, and that I am dead serious! I will summarize my question again.

I am having difficulty going over 30 WPM. I can copy solid at 25 WPM. I suspect that one of my problems might be that I can not "copy behind" or "copy in my head." I know that these skills are important, but I am not sure how I can develop them when I operate under the heavy QRM, QRN, and QSB. The band conditions have been very unfavorable lately, and I tend to write down everything so that I can figure out what is sent later even if I miss some letters here and there.

I should also add that I do not have my own rig. I only use the rig of my radio club, and I use it only once a week. So the overall situation is not very favorable, either. I am still working very hard to improve my CW speed, and managed to reach 25 WPM level a couple of months ago, but I guess I then hit a plateau. If anybody (either experienced or non-experienced, hams or non-hams) has any suggestions or advice for my improving CW speed, I will be truly grateful. My E-mail address is ys@isr.harvard.edu. Thanks.

>sure are a wild variety of antennas advertised.
>
>73, Ken AC1H

Ken I am running a Kenwood TS-50 in my Explorer and running it
through an SGC automatic antenna tuner. The antenna tuner matches my
115" stainless steel whip on any frecquency from 80 - 10 meters.
I use the heavy hustler ball mount mounted on the right rear quarter
panel. The antenna tuner output needs to be as close as possible to
the antenna feed point, I accomplished this by removing the left rear
compartment in the back of the truck and mounted the antenna tuner
there. To keep the antenna steady I tied a piece of weed wacker
nylon line to the antenna and ran it to the roof rack.
This all may seem extereme but the ease of multi band operating
is worth it.

Also the Explorer has a problem with noise generated by the electric
fuel pump which is mounted within the fuel tank. Ford has a fix which
they will do for free if the truck is still under warranty.
Tell your dealer to look for Service Bulletin #93-15-6

If it is an Icom brand radio, it will encode but the decode will cost
an extra $60. Or vice-versa.

Sounds like you're on shaky ground. Part 97.111(a) makes it pretty
clear that you can only exchange messages with other amateur stations
or with certain other stations under specific circumstances (emergencies,
RACES, etc.) Repeater or not in there, this looks to me like the FCC
would judge that you're communicating with a CB station, not another
amateur station. I wouldn't do it.

>
Sorry, can't be done. Look at Part 97.111, and you'll see that you can only communicate with other amateurs (except for emergency communications). The repeater owner, by consenting to this use of his repeater, is putting his license on the line. Go back and educate him.

73,
Mike, KK6GM

>most other dual-bands.)

My Ft-530 transmits just fine from 420Mhz all the way up to 450Mhz (I didn't try any of the out of band stuff, but I'm sure it will go a little higher/lower than this.)

My radio has had the pad 14 mod done to it, maybe this makes a difference.

The ROM's are available from AEA for $75 and a manual (not included in
with the ROM's) is $25. All prices are U.S. Dollars and do not include
shipping, etc.

The ROM's are copyright by AEA and therfore cannot be legaly copied,
emailed or posted. The public domain eprom images on the net
are for TAPR TNC-2 clones and will not run in a pk232. :-(

I have seen new PK232MBX's with PACTOR for about $300 from discount
mail-order dealers, and for $283 at hamfests (from a local dealer).
Since the upgrade costs so much, it hardly seems worth buying a used one.

I was able to "bargin down" a used pk232 to $175 at a hamfest because
two tables down, a dealer was selling new ones for $283. You can imagine
how upset I was to find out the upgrade was $100 plus shipping.

73,

Geoff.

The 3-Hr Ap Indices for 05 AUG 94 are: 7 9 5 7 5 4 5 5
Greater than 2 MeV Electron Fluence for 06 AUG is: 6.5E+06

SYNOPSIS OF ACTIVITY

Solar activity was very low. The one spotted region
visible, Region 7762 (N06E17), produced a B9/0F flare at 0541Z,
the largest event of the day. A few smaller subflares also
occurred.

Solar activity forecast: solar activity is expected to
persist at very low levels. Region 7762 may muster an
isolated C-class flare during the next three days.

The geomagnetic field was quiet.

Geophysical activity forecast: the geomagnetic field is
expected to continue at quiet levels throughout the period.

Event probabilities 07 aug-09 aug

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 07 aug-09 aug

A. Middle Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 15/15/15
Minor Storm 10/10/10
Major-Severe Storm 01/01/01

HF propagation conditions were normal over all regions.
Stable propagation will continue over the next 72 hours,
through at least 09 August inclusive.

2132. RADIO EQUIP DONATIONS WANTED FOR HAITI FEEDING PROGRAM

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-07 19:57:30 UTC
From: tjblack@cais2.cais.com
Message-ID: <323ebb$osi@sun.cais.com>
Source record: 262176

Mission Reach Out, located in the bush country of Haiti between Leogane and Ci-Ara, feeds approximately 4000 people per day on-site and via a food distribution program to (currently) 13 villages. Expansion of the village feeding program is underway.

Neither electric power nor telephone lines have ever served this area. There are two types of communications available to Mission Reach Out: Runners and amateur radio. They use both.

On-site electric power for amateur radio is supplied via 4 deep-discharge, lead-acid batteries. Battery charging is supplied via a 25-year old, donated, two cylinder diesel generator which provides 110 volts at 60 Hertz. Solar cells are too expensive for Mission Reach Out to afford despite the glorious sunshine that is available daily. Charcoal is the on-site cooking fuel since the embargo and the only available fuel ever for the village-feeding program.

Mission Reach Out depends on its donated Kenwood TS-150 and 3-element beam to communicate with the 70-member church in the United States which founded the mission in 1981. It also depends on the TS-150 to communicate with other missions around Haiti on an 80 meter net. If the TS-150 goes out, they only have runners.

MISSION REACH OUT NEEDS: 1) AN ALL-BAND, HF TRANSCEIVER TO BACK UP THE TS-150. 2) TWO METER BASE STATION AND TWO METER PORTABLES TO ASSIST WITH THE VILLAGE FOOD DISTRIBUTION PROGRAM. SOLAR PANELS WOULD BE TOO MUCH TO EXPECT, BUT THEY CERTAINLY WOULD BE WELCOMED.

Equipment donations will be tax deductible. Please contact me if you have any equipment you would like to donate. Don't limit your offers just to what's listed above. Your imagination would be helpful.

For more information and instructions on the handling of donations please send e-mail to: tjblack@cais.com

2137. Amateur Radio Transceiver For Sale

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-07 21:28:01 UTC
From: polland@Xenon.Stanford.EDU
Message-ID: <323jl1$oq@Times.Stanford.EDU>
Source record: 262084
Cross-posted to: misc.forsale,ba.market.misc,rec.radio.amateur.misc,rec.radio.amateur.equipment

I have the following Amateur Radio Equipment for Sale. Would like to sell as a package deal. My investment to date is about $1700. Here is your chance to buy one of the best transceivers made for a deep discount.

****

1.) Kenwood TS-440S w/ Automatic Antenna Tuner. Purchased two years ago for about $1,300. NEVER used. Has been sitting here for the past two years. I am not really interested in HF. Would like to get $1100 or best offer for the transceiver. Unit is in like-new condition. Will ship in the original box. (With manual)

2.) Trio CW Filter YK-88C Crystal Filter 8830.7 kHz (L71-0211-05).

3.) Service Manual for TS-440S with antenna tuner

4.) NPC Regulated Power Supply (25 amps). Meters for both Voltage and Current.

5.) Cushcraft 5-band HF Antenna (ATV-5).

6.) Kenwood MC-85 Microphone Control Station. This is Kenwood's Deluxe desk-top Microphone with built-in audio-level compensation (700 ohms) and undirectional electret condenser microphone.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, Japan DX News, KA2AEV, K4CEF & Southeastern Cluster Group, WA3YVN, SM0CNS & SM0TXT of the DX-Loggen, AH0W and ZS1AFZ for the following DX information.

3W, VIETNAM. Reports from Japan indicated that JA1IED will be active from August 13-17th. His callsign is unknown at this time, but if he is not issued a 3W6 callsign, he will sign 3W6/JA1IED. Suggested frequencies are: SSB - 21150-21200 and 14240 kHz / CW - 21010 and 14013 kHz.

7Q, MALAWI. Eliseo, IN3VZE, will be active again as 7Q7CE from August 7-25th. No other details are available at this time other than to QSL via IN3VZE. Meanwhile, John, 7Q7JL, has been active around 18155 kHz between 1300 and 1530z. QSL via G0IAS.

9M8, EAST MALYSIA. Dave, 9M8BT, continues to be active on 20 meters SSB with a very good signal into the East Coast. He was also heard this past weekend on 20 meters RTTY. Best times to look for him are between 1245 and 1500z. QSL via N5FTR. Johnny, 9M8DB, also has been active around the same time with a good signal. QSL via Johnny Tan, Box 1549, 98008, Miri, Sarawak, East Malayisa.

9N, NEPAL. Well known "YL" DXer, Kyoko, NH6RT, was heard a couple of times this past week signing 9N1KY. She was heard one day on 14184 kHz at 1648z and on another day on 14270 kHz at 1700z. QSL via Kyoko Yamakami, Box 3, Tokaimura, 319-11, Japan.

PJ7, SINT MAARTEN. Frank, AH0W/OH2LVG, will be returning to Residence la Chatelaine at Simpson Bay Lagoon the last week of September to be active in the CQ WW RTTY Contest and Scandinavian Activity Contest (both Sept. 24-25th). The callsign PJ8X will be used during the contest and PJ7/OH2LVG outside the contest. QSL via KE7LZ. Jack, WA7LNW, will also be with Frank in PJ-land. The main purpose of the trip is to complete the antenna work that Chod Harris (Editor of the DX Bulletin and DX Magazine)

and Frank started in May. Frank states that in the future, DXpeditioners who want to venture to Sint Maarten may be able to use this station for various contest weekends. Also, Frank and Jack may make attempts to activate Saba for the IOTA hunters.

TT8, CHAD. Larry, F5IXR, will be active beginning August 18th. He will be signing TT8/F5IXR until he receives his TT8 callsign. He has requested the callsign TT8XR. QSL via F5MXH.

V2, ANTIGUA. "Team Antigua", sponsered by the Frankford Radio Club, will once again be active from here, October 26th to November 2nd. Activity will be on 160-10 meters (including all the WARC bands), CW/SSB with a possibility of 6 meter and satellite operations (if time and conditions permit). Their main goal will be to operate during the CQ WW SSB Contest as a Multi/Multi station. The callsign during the contest will be V26B. V26A will be used before and after the contest. The operators will be AB2E, N3BNA/V26A, WT3Q/V26B, KA2AEV and possibly one or two more operators. Additional callsigns may be active from this group, but as of now V26A and V26B are the only ones issued. QSL V26A via WB3DNA. QSL V26B via WT3Q.

VP8, SOUTH GEORGIA ISLAND (UPDATED). Al (WA3YVN and VP8SSI co-organizer and operator), Jan (WA4VQD), recently founded the SGI DXpedition Group. Their vision is to organize and conduct DX operations from high demand DX locations around the world, including many of the low latitude Antarctic Islands. The group's first DXpedition will be to Grytviken, South Georgia Island for three weeks in January 1995. In a news release, all the DXpeditions gear for four complete HF stations was put aboard the Research Vessel "The Abel-J" in June at Fairhaven, Massachusetts. WA3YVN accompanied the freight to Fairhaven and saw all of it safely stored by the ship's crew. The group is still looking for one or two high caliber CW operators to complete the team. Al, WA3YVN, can be contacted at the SGI DXpedition's address below or by phone (407) 727-0201 or Fax (407) 728-8072. The group is receiving good support from the DX community. However, at a cost of over fifty thousand dollars much more support is needed. The SGI DXpedition group still needs help with the cost of the charter vessel, generators, and fuel. If you would like to help, send contributions to: SGI DXpeditions, P.O. Box 2235, Melbourne, FL 32902. (Checks payable to SGI DXpeditons) Clubs and significant contributors will be noted on the QSL cards.

VQ9, CHAGOS. VQ9TP has been quite active lately on several bands operating CW. Most of his activity is between 1230 and 1630z. He was heard this past weekend on 18083 kHz between 1345 and 1600z. For other frequenies, check on the bottom edge of the other bands 25 kHz (+/-) up. QSL via N5TP. Tom, VQ9TT, was also heard on 14014 kHz at 1300z.

VR2, HONG KONG. Tom, VR2GC, has been heard most weekends on 20 meters CW. Check around 14015 kHz between 1230 and 1530z. QSL via G5JJ.

WHO SAID THE BANDS ARE DEAD? Bart, K4CEF, from the Southeastern Cluster Group, reports that several mornings this past week 20 meters has been

excellant to Southeast Asia for the East coast station. XX9AS and 9M8's have had good signals on both Saturday and Sunday on 20 meters SSB. Lots of HL's, several DU's and at least 5 different BY's were reported on Sunday. Bart says, "Can fall be far away?" (ed. Geeee Bart! Please do not rush it. I cannot believe Lador Day is just around the corner! Where did the summer go?)

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

2141. Amateur Radio Equipment for Sale

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-07 23:12:20 UTC
From: polland@Xenon.Stanford.EDU
Message-ID: <323pok$164@Times.Stanford.EDU>
Source record: 262088

I have the following Amateur Radio Equipment for Sale. My total investment in this HF System is about $1700. Please make a reasonable offer.

1.) Kenwood TS-440S w/Automatic Antenna Tuner Purchased two years ago for about $1,350. NEVER used. Has been sitting here for the past two years. I am not really interested in HF. Would like to get $1100 or best offer for the transceiver. Unit is in like-new condition. Will ship in the original box. (With manual)

2.) Trio CW Filter YK-88C Crystal Filter 8830.7 kHz (L71-0211-05).

3.) Kenwood Service Manual for TS-440S w/AT

4.) NPC Regulated Power Supply (25 amps). Meters for both Voltage and Current.

5.) Cushcraft 5-band HF Antenna (ATV-5).

6.) Kenwood MC-85 Microphone Control Station. This is Kenwood's Deluxe desk-top Microphone with built-in audio-level compensation (700 ohms) and undirectional electret condenser microphone.

Considering one could purchase a TS450, new, for about the same price,
why would someone want to purchase a used radio which is essentially
the same thing for the same amount?

Why is it hams and computer people always expect to sell their
equipment for just about what they paid for it, as if their
equipment is somehow immune to depreciation and obsolesence[sic?]

I have seen adds for AEA's WEFAX interface. Has anyone ever had any
experience with this product? I would like any info on what is required
to actually get weather photos directly from satellite. What frequency
are these photos transmitted on? Are they always the same photos (location)?
What kind of quality are these photos? Any info would be appreciated.

Thanks,
Tim Kallio

TO ALL RADIO AMATEURS BT
BID: $ANS-218.01

KO-25 NASA Keps Track The Wrong Satellite

For the past several weeks many amateurs have noted that the NASA keps for KO25 have not produced accurate AOS and LOS times observes AMSAT-NA Orbital Data Manager Ray Hoad (WA5QGD). With the help of W5IU, K5EKH, and KG5OA, numerous KO-25 passes have been observed in conjunction with other objects in the KO-25 launch group. The consensus of this study is that the object NASA tracks as Catalog #22828 may actually be KO25.

In order to help remove this confusion, the keplerian elements for Catalog #22828 will be included (for the near future) in the weekly kep-lerian element set published on INTERNET. Please post any comments on the accuracy of the Cat. #22828 keps in tracking of KO25 as messages addressed to WA5QGD on either KO-23 or KO-25 digital satellites. The NASA Orbital Information Group has been advised of the tracking problem with KO25.

Note: The most accurate way to determine whether a transmitting satellite fits a set of keplerian elements is to observe the frequency of the satellite's transmission at the Time of Closest Approach (TCA). For low orbit birds, this corresponds to the time of maximum elevation given by most tracking programs. At this time there will be no doppler shift and the transmission frequency should match the published channel frequency (assuming no shift due to other causes). If a set of keps meets these requirements, it is a good match for the satellite. This method will give more consistent results than the AOS/LOS method.

[The AMSAT News Serive (ANS) wishes to thank Ray Hoad (WA5QGD) for this bulletin item.]

Weekly OSCAR Status Reports: 06-AUG-94

AO-13: Current Transponder Operating Schedule:
M QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Jul 11 - Sep 12
Mode-B : MA 0 to MA 90 | Omnis : MA 230 to MA 30
Mode-BS : MA 90 to MA 120 |
Mode-S : MA 120 to MA 122 |<- S beacon only
Mode-S : MA 122 to MA 145 |<- S transponder; B trsp. is OFF
Mode-S : MA 145 to MA 150 |<- S beacon only
Mode-BS : MA 150 to MA 180 | Blon/Blat 180/0
Mode-B : MA 180 to MA 256 | Move to attitude 230/0, Sep 12
==========
N QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Sep 12 - Dec 19
Mode-B : MA 30 to MA 150 |<- OFF Oct 22 - Nov 07 for eclipses
Mode-B : MA 150 to MA 190 | max duration 2h 12m
Mode-BS : MA 190 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-B : MA 230 to MA 30 | Alon/Alat 230/0
Omnis : MA 250 to MA 140 | Move to attitude 180/0, Dec 19
The battery charge state is of paramount importance during the eclipse
seasons. As always the command team may have to have to make temporary
changes to the published schedule. In that case we will try to minimize
the inconvenience, setting Mode-B OFF from MA 230-256 in the first
instance.
==========
[G3RUH/DB2OS/VK5AGR]

DO-17: DOVE is running a new set of software that tests the
digital-to-analog converter (DAC) and other hardware and software cap-
abilities. It plays digitally generated tones through the DAC and exer-
cises software that implements two way communications between the on-board

processors. [WD0E for the DOVE Team]

RS-10: RS-10 has been working very well. Lots of activity with 2 stations worked /MM I6KYL/MM EL27 and N1KTM/MM EL67. Also on the 28-JUL-94, WC9C heard the station KC6VRK who was on AO-13 as RS-10 pass underneath right after AO-13 went through its perigee; his signal was very strong on the 10M downlink. The CW Robot is back up and working just fine. Also, WA6ARA reports that RS-10 has been sending down excellent signals at his QTH with lots of stations using CW. [WC9C & WA6ARA]

AO-10: After last week's glowing report about AO-10 sending down excellent signals, ZL2TPO reports that AO-10 has started to "FM" very badly. Up until last week it has been operating quite well and there have been a number of stations operating. Please note that when AO-10 is "FMing," please refrain from using it. [ZL2TPO]

KO-25: WH6I reports that KO-25 was in some sort of "loader-mode" earlier in the week. Today, however, the BBS seemed to be working again, but he was unable to send any commands to it. WH6I has not seen anything to indicate what is going on. [WH6I]

LO-19: LUSAT-OSCAR-19 (LO-19) is still not running its BBS. [WH6I]

IO-27: WH6I still has not heard anything from ITAMSAT. [WH6I]

AO-16: Still going strong and very doing well. There is some gateway traffic on AO-16 but not enough to present any problem to other users and the file lifetime on the bird is still quite long. [WH6I]

KO-23: KO-23 is going strong and doing well. [WH6I]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ N0QCU. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

2147. Re: 2m/11m crossband QSO: legal?

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-08 02:13:18 UTC
From: linley@netcom.com
Message-ID: <linleyCu7266.7t4@netcom.com>
Source record: 262102

Thanks to all who replied. Judging by the number of responses over a 24 hr period, I seem to have pressed a hot button with a lot of people. I read 97.111 (Authorized Transmissions) and 97.113 (Prohibited transmissions) and then posted my question because I didn't see non-emergency cross-service communications specifically allowed or disallowed. Anyway, I will look for other solutions. I just wish I could inspire my dad to want to get his ticket.

2148. Broken Kenwood TM-641A; Any ideas?

Newsgroup: rec.radio.amateur.misc
Date: 1994-08-08 02:53:31 UTC
From: don.irving@rahul.net
Message-ID: <Cu7418.3xB@rahul.net>
Source record: 262107

The squelch function on my 641A suddenly stopped working. The 220 module is constantly in open-squelch mode with receiver white noise present. Turning the knob has no effect. It still receives and transmits. I took apart the control head and verified that the squelch potentiometer is functional with a high and low resistance identical to the the pots for the other band modules. It is not an RF interference problem because it happens on all frequencies and from any location. It suddenly happened when I started my car this morning. The rig goes straight to the battery. Did a voltage spike trash the 220 module or something. I tried re-initializing the 220 module with no success.

I'll call Kenwood tomorrow, but I am hoping this may have happened to someone else with a solution available. Any ideas??

NOTE: The Effective Sunspot Number for 06 AUG 94 was 28.0.
The Full Kp Indices for 06 AUG 94 are: 1o 2- 2o 2- 2- 2- 2- 1+
The 3-Hr Ap Indices for 06 AUG 94 are: 4 6 9 7 6 7 7 5
Greater than 2 MeV Electron Fluence for 07 AUG is: 6.1E+06

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7762 (N05E04), a
simple C-type group, is the only spotted region. The limbs were
quiet.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet levels for the
past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to persist at quiet levels for the next 2 days. A
recurrent coronal hole-related disturbance is anticipated to
begin on 10 August.

Event probabilities 08 aug-10 aug

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 08 aug-10 aug

A. Middle Latitudes
Active 10/10/40
Minor Storm 05/05/20
Major-Severe Storm 01/01/10

B. High Latitudes
Active 15/15/50
Minor Storm 10/10/30
Major-Severe Storm 01/01/10

HF propagation conditions were normal over all regions.
No changes are expected until about 10 or 11 August when a
coronal-hole related disturbance should produce minor signal
degradation for high latitude transpolar and transauroral
paths. Some upper-middle latitude paths may also be affected,
particularly on night-sector circuits.
